35490. RE: [SkywavesDX] elad file - allow me to redeem myself John ;-)

Yahoo group: SkywavesDX (2015)
Date: 2015-01-01 08:53:37 UTC
From: Jim Smith G0OFE
Topic: 35450 Message: 35490

Simon,

If you find the Data Analyser runs slowly on your PC, try the following steps if you're not already doing so:

Don't load the whole recording at once, look at say 15 mins at a time, then analyse the next 15 mins.

The program eats more memory each time you load a segment of a recording, so every other "reload", stop and restart the program – this will 'give back' the memory to your PC. The last used file settings will be retained.

If you need any help with this please shout.

The author of SDR Radio says he has a fair bit of work to do to the Analyser to tidy things up, which he will do at some point.

Jim.

==========

Jim, Bournemouth, Dorset. IO90BR.

Elad FDM-S2, Perseus/FM+ and Funcube Dongle SDR Recievers

8-element OP-DES for Band 2, 12-ele ZL Special for 2m, plus wideband vertical.

John,

I'm not sure if I have followed this thread properly and if the 103.2mhz Polish was still unid, but I played the file and get a PI code 3401, so PR Radio Opole.

I must say that is an amazing recording. I have no joy with MS at all. Do you use SDR Data file Analyser to pick the bursts out of your recordings or some other method ? The Analyser is good, but runs very, very slowly on my computer.

Simon

35491. Band II Tropospheric Loggings for 31 December 2014

Yahoo group: SkywavesDX (2015)
Date: 2015-01-01 09:44:30 UTC
From: Janpeter van Dijk
Topic: 168 Message: 35491

Hi All,

First and foremost the very best wishes to everyone for 2015, with loads of DX!

In between the festivities, I did some DX-ing yesterday. Below my loggings.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Wednesday 31 December 2014

It doesn't happen that often these days. It's been on with test cards and scenic video clips for a few weeks. I'm able to see it from three different transmitters here south of Limerick. Perhaps a new tropo target for some.Cheers! And here's to a great 2015!Brock Whaley, Ireland

From: John Faulkner, Skegness
Topic: 35450 Message: 35494

I don't have too much problem with the running of File Analyser, but I am aware it takes up valuable computer resources. My i7 desktop computer is reasonably happy running several instances of File Analyser so I can look through my recordings in a matter of minutes. I doubt I would be doing anywhere near as much MS DXing were it not for File Analyser. A brilliant tool.

John

35495. Re: [SkywavesDX] elad file - allow me to redeem myself John ;-)

Yahoo group: SkywavesDX (2015)
Date: 2015-01-01 12:21:39 UTC
From: John Faulkner, Skegness
Topic: 35450 Message: 35495

Hi Simon.

It just occurred to me why I am not getting the Polish station on 103.2. Quite simply, I Don't actually see 103.2. :O) It's off the edge of the scale in the FDM-SW2 software. When I make a spectrum recording, there is a MHz or less either side of the chosen spectrum. Having forgotten how to use SDR Console yet again I am unable to load in the file and play it. In fact I can only get a maximum of 96 kHz IF on band 2 now. I haven't a clue what I doing wrong. I know I am spending far too much time on MS and not bothering to use other modes. I haven't even bothered much with the recent tropo.

I know I need to sit down and get to lnow SDR Console, but the RDS did not seem as sensitive as with the S2's software - with MS only. The RDS was more sensitive on stable groundwave signals. Now there's a turn-up I didn't expect. Plus, I have no idea how to loop part of a recording in SDR Console and I don't even know if you can.

Thanks

John

Nope - I can't even get a file to load into SDR Console anymore. I
choose the directory where the file is but it doesn't see it.

Thanks both,

I think my computer may need replacing - When I analyse an elad 6144 file, it processes at about 58mb/s on average - How does that compare with yours ?

John - To get the full bandwidth in the S2 software you need to tick the box "Full BW spectrum" in the Graphics tab of settings..... but in the last couple of versions of the software I have found that old recordings do not give the full bw, although new ones do. And yours didn't either - Are you using an old version of the software ?

SDR-Console has for a few months now had a strange file picking method. I think Simon introduced some sort of database or indexing and when you press open you have to "choose Folders" to show where you files are and then Search files. This will then enable you to select files in the future. It can take some time initially if you have lots of files.

Simon

Not sure exactly. a 50 second file (why don't they do a full minute?)
works out at "2,097,145 KB". Per second? You're asking something there,
lol. My brain cell gets confused above 2+2.

All latest software versions here.

That's what I did. I am aware of this method, but the files don't appear
anymore. I really cannot explain this one. Thunderbird has become
troublesome too. With every installation of the same version of Windows
(I've done this twice over Christmas), some problems disappear and new
ones arise. My computer is running at full speed now though.

Thanks.

John

From: Christian Stödberg
Topic: 35501 Message: 35501

Hello! A weak carrier appeared and disappeared very fast but something’s is laying in the background bubbling on R1.

I got the carrier on 49,750,04

Maybe it’s the aurora playing hide and seek?

73’s de Chris

One or two Spanish signals heard here since about 10 pm:

91.6 RNE Clásica Monte Xalo (was best about an hour ago, very weak at the moment)
95.8 RNE 5 Monte Xalo (in earlier)
105.0 RNE 5 Lierganes fair mono as I type

This should peak tomorrow according to the Hepburn maps. Good DX.

Nick, Whitchurch, Hampshire.

I've also been doing other things but I am off work for the next couple of days with a bad foot but it gives me more time to DX ;-) There have been several Spaniards lurking about here. Are you getting Euskadi Irratia on 87.7 Ian? That's been one of the more reliable ones.
I also had RDS from BLEUGASC on 100.5 earlier this morning, as well as a weak Channel 103 from Jersey about an hour ago.
 Good DX.

From: g1mxp@...
Topic: 35515 Message: 35515

Authorities in Gambia have closed Teranga FM (97.5Mhzs) a community station in Sinju Alhagy as part of a crackdown following a failed attack on the presidential palace.
Security agents ordered the manager of Teranga FM, Alagie Ceesay, "to stop broadcasting with
immediate effect".The community station was taken off air Saturday.
The police kept Ceesay for questioning Saturday night. He was released on Sunday without charge.
No explanation was given for the clampdown on the station, which was also shut temporarily in 2012 amidst outcry over the state`s execution of nine prisoners. President Jammeh was in Dubai when a group of heavily-armed men travelling by canoe launched the attack in the coastal capital. Presidential guards repelled the attack, which was led by an army deserter, according to military sources. Dozens of soldiers and civilians have been arrested over the attack.

35516. Band II Tropospheric Loggings for 5 January 2015

Testing AirSpy in FM band with SDRsharp and CSVuserlistBrowser. Nice!

Ciao, ho fatto alcune prove in FM con il piccolo SDR AirSpy usato con il programma SDRsharp integrato con il gestore di database CSVuserlistBrowser. Mi pare una buona combinazione sia per individuare le radio sulla frequenza che per realizzare un log oppure un bandscan. Ecco il post:

Radio & Communication Info http://radiodxinfo.blogspot.it/

AIR - RADIORAMA: AirSpy, SDRsharp e CSVuserListBrowser: prove di integrazione

35521. new videos showing FM and TVDX. SDR# plugins

Yahoo group: SkywavesDX (2015)
Date: 2015-01-08 04:46:59 UTC
From: pe1etr@...
Topic: 35521 Message: 35521

Hello all,

I've been busy with SDR using my new fast laptop. :)

A couple of useful new plugins for TV and FM dxers for SDR# are demonstrated, as well as HDSDR with RDS spy on old IQ WAV recordings.

PAL/SECAM TV plugin SDR#.

Using the TV plugin in SDR# with an IQ Wav file recorded in 2014 in Biratnagar, Nepal of TVDX reception via Es from Thailand. Noxon DAB stick RTL-SDR. The carrier can be seen and heard as can a picture. There are two carriers both from Thailand so the picture is a mess :)
If an SDR receiver with a wider bandwidth is used (eg Airspy, SDR Play or HackRF), the Aux VFO plugin can be used to monitor the sound. Note there is no colour available even on good signals despite the plugin's name :)

HP laptop with Core i5 processor used.

http://youtu.be/qJxMubUONj0

....
Up to three frequencies can be listened to at the same time with the SDR# plugin "Aux VFO". Here two local stations in Yangon, Myanmar are heard

Aux VFO (1)

Left channel 88.2 Badamyar FM
Right channel 89.3 Cherry FM

Noxon DAB stick RTL-SDR, dipole.

http://youtu.be/B-jq27Uv57E

....
Aux VFO (2)

Up to three frequencies can be listened to at the same time with the SDR# plugin "Aux VFO". Here three semi-local stations recorded in Staffordshire, UK using Airspy, are heard in this IQ Wav recording.

Left channel BBC WM on 95.6MHz
Centre: Pirate on 95.1MHz
Right channel BBC Shropshire on 96.0MHz

http://youtu.be/M7WaPIT4wpw

....

HDSDR with RDS spy used on old Es IQ WAV 6202 zoom

HDSDR with RDS spy. The PI code 6202 is obtained.
IQ WAV file recorded in Blackpool, UK during the 2013 Es season.

http://youtu.be/sKUCKenZI-E

.....
HDSDR with RDS spy used on old Es IQ WAV pip2

HDSDR with RDS spy. The PI code 5425 and the full PS RADIO_24 are obtained.
IQ WAV file downloaded from the web, originallyrecorded in Northern Germany by "P-A", using a Perseus with FM+, during the 2011 Es season.

http://youtu.be/pzOIwMIYK8U

.....

TVDX R1 carrier via F2 SDR sharp 2014-12-24 16:06 (UTC +6:30)

Channel R1 (49.75MHz) carrier via F2. TVDX received in Yangon, Myanmar.
Noxon DAB stick RTL-SDR with dipole.

Hello all,

Another video...

Video recorded in Dec 2014. Wasn't able to upload it then.
Includes "SDR# Perseus GUI"

There is also a station on 98.0MHz which is weaker than those shown in the video.

From: Tim Bucknall
Topic: 35527 Message: 35527

Dear all,
found this oddity today while hilltopping at Mow Cop on the
staffordshire/Cheshire border, http://en.wikipedia.org/wiki/Mow_Cop

I checked 44.15 to see if BBC R2 was also radiating but nothing was heard

45.25 was equivalent in strength to the 50 watt community stations in
Birmingham.
as its likely this will propagate, it would be nice if the BBC wasn't
informed for a while ;-)

would be nice (and entirely possible) to see it logged Stateside via F2 props

Hi,
Just scanning the band and noticed TFM Radio 96.6 is sending just Carrier and RDS data at present, no audio, i guess from Bilsdale, I should know being local ;-)
Good time to check for weak dx!

aaagh, i only just logged on and saw this!

did you manage to get anything new on the adjacents?

thanks for the tip though i really appreciate stuff like this

oh god! even Burmese TV is full of diet shows! is there no escape?

in all seriousness that is pretty freaking awesome

as our Asian Specialist, I need to pick your brains about China
do you know if China has any really big tv txs in the 855-903mhz
region that could be possible EME targets?
(this bit of spectrum is actually quiet enough at my qth to attempt
such a thing)

also how much activity is there in the 87-87.5 range, are there any
huge txs that could be multihop e's targets from Eastern Europe if not
from the UK?

please feel free to share any sdr files from your exotic locations

on a related note
I wonder if we could "rebrand" the sdr filesharing group as the
"Skywaves SDR filesharing group"? just to bring it into the skywaves
fold

or is it rendered obselete by:
http://skywavesdx.org/viewforum.php?f=65&sid=2362f009deb83de722fd4de81b936049
?

Well she is saying “Service Information Radio Vatican” . I wonder if it is Radio Esperance with an off-air relay of Vatican Radio carrying details of the Pope’s tour in Asia? They mention Vatican Radio on their web site - http://www.radio-esperance.fr/antenne-principale/programme/

From: John Faulkner, Skegness
Topic: 35534 Message: 35541

Thanks Ian and Stuart for your help with this. This one is proving very difficult to nail down.

Apologies for the late reply, but I have been pondering over this being one of two stations. RCF and Radio L'esperance and technical difficulties on the RCF website has caused a delay.

I think the station received is more likely to be RCF, who have transmitters on 87.6 and 87.7 - I later discovered the same ID on 87.7 at the same time. Radio L'esperance is only listed on 87.6.

The RCF website returned this morning but is behaving very oddly. After an hour of research this morning I discover that both stations have Vatican Radio extracts an hour or two before the time of my reception, but not AT the time of my reception. Maybe the programme schedules are variable or out of date.

So, still no further and, if anything, two steps backwards, but the same reception on 87.6 and 87.7 would logically point to RCF. The transmitters on 87.6 - Besancon, and 87.7 Gap, are exactly inline with the rest of the stations received during the same meteor burst, so this would almost nail it for me, but in view of the discrepancy of the timing of the Vatican programme and the fact that both stations are listed as carrying these shortly before the time of my reception, I am reluctant to add these to to my log.

Thanks again.

John

This via meteor scatter.

http://youtu.be/tQhpdER-ce4

A very weak signal from Business FM, Kaliningrad on 101.8. Surprised it produced RDS at all. Oddly, 102.5 and other Kaliningrad station were not present.

Good DX!

John

Hi All

I have just released the first version of my RDS Data Logger Plugin for SDRSharp, which does:

The RDS Data Logger Plugin is designed to log RDS data either by being parked on a single frequency or by using the scan function. The scan function sweeps the FM Band from 87.5 MHz to 108 MHz looking for any RDS data which it will then (if Auto Log is checked) log to an RDSDataLogger-yyyy-mm-dd.csv file

Maybe 92.5 wasn't used because of BBC R Leeds on 92.4 as this can be received at Beeston Castle car park with RDS as this is not far from Crewe/Nantwich.

35558. Mystery ID - 103.8

Yahoo group: SkywavesDX (2015)
Date: 2015-01-27 20:10:19 UTC
From: John Faulkner, Skegness
Topic: 35558 Message: 35558

During this morning's meteor session I recorded the following ID on 103.8 ....

http://youtu.be/gIkcgZ6bT38

Also, note the station on 102.9 coming in at the same time ...

http://youtu.be/SdT7tSIPA9U

If I am not mistaken, 102.9 sounds like Russian or something very similar. Could 103.8 be Lyuks FM from Ukraine?

Thanks

John

Thank you Nick for listening and also hearing the same as me.

But a BIG thank you to Konrad in Poland for confirming the Lyuks FM jingle from Ivano-Frankivs'k, Ukraine - my first Ukrainian meteor scatter! Ivano-Frankivs'k is in western Ukraine at 1760 km and so well within a single meteor 'hop' distance.

Konrad also confirms that the language on 102.9 is Polish, possibly PR Radio Rzeszów from Lezajsk. Although this one is not a 100% confirmation it would make sense as Lezajsk is in south-east Poland and quite close to / and inline with Ivano-Frankivs'k.

Good DX!

John

Congratulations on your reception of the Kresy City formerly known as
Stanislawow ;-)

that is an amazing catch, sorry i didn't log on in time to help you with this
I'm told by my opposite number at Lviv city hall that my Ukrainian is
pretty good

that is a seriously awesome catch, they site all the txs in city
centers and use low powers
there is no Ukrainian equivalent of holme moss etc

this means you can now try for anything in West Ukraine by Meteor now

check out my Lviv bandscan and try for them all tonight ;-)

off the top of my head 106.7 was one, if you can get RDS you'll be
amused how they twist the available characters to accomodate the
Ukrainian alphabet

ie: Galy4ya

Thanks Tim.

So no big masts anywhere in the Ukraine? Isn't that the same in Poland to a degree? I remember you saying the transmitters are in town and city centres on buildings as opposed to on huge out of town sky-scraping masts.

Meteor scatter is purely luck of the draw. I don't think it's possible to target specific areas or even specific countries. A fair amount of my meteor reception comes in way of my antenna beam. I should be trying the OIRT band more often as it would be possible to check for parallels to work out the transmitters. The only level of prediction with MS is the distances. Anything over 1800 km here is rare but does happen occasionally.

Breaking the 2000 km barrier is almost impossible and needs help. I have only had a couple of instances of this and I am sure it must be the result of some kind of tropospheric link-up. There was a brief and unexpected spell of Galician tropo on the 25th in southern England. I didn't get the tropo here but my only meteor scatter at that time was from La Coruna in Galicia - the same transmitter which was being reported down south in the tropo. My antenna was beamed south-east at the time. So tropo may play more of a part than I have previously thought, unless it was coincidence.

For you Tim (and for me too) I will record the OIRT band shortly and see if I can ID anything. There might be some guesswork involved without RDS but narrowing down the transmitters, based on distance, should be simple.

Cheers Tim.

35562. Re: [SkywavesDX] OIRT

Yahoo group: SkywavesDX (2015)
Date: 2015-01-28 14:27:04 UTC
From: John Faulkner, Skegness
Topic: 35558 Message: 35562

After recording an hour of the OIRT band, the only things I received were images of BBC stations on two different frequencies. They were fluttery in nature and received for no more than six or seven seconds at most. They weren't even the same stations, but the frequencies remained the same, approximately 70.0 and 70.68. For instance, 70.68 had BBC Radio 1 on one apparent 'burst' and the next sounded like BBC Radio 4 .Not sure how to explain away these! The FDM-S2 stated "! Out Of Range" throughout, so it is clearly being pushed beyond its capabilities.

2000 km seems to be the length for classifying amateur MS as “good” DX. Here’s a presentation on amateur MS from 2013 RSGB convention - http://vimeo.com/77358505 haven’t watched it all myself but may be interesting.

Thanks Stuart.

I will have to watch this in chunks today and I've already seen the
first ten minutes. Looks like a nice presentation. I am up to the
'backscatter' bit now.

Subject: Re: [SkywavesDX] Mystery ID - 103.8

Thanks Tim.

So no big masts anywhere in the Ukraine? Isn't that the same in Poland to a degree? I remember you saying the transmitters are in town and city centres on buildings as opposed to on huge out of town sky-scraping masts.

Meteor scatter is purely luck of the draw. I don't think it's possible to target specific areas or even specific countries. A fair amount of my meteor reception comes in way of my antenna beam. I should be trying the OIRT band more often as it would be possible to check for parallels to work out the transmitters. The only level of prediction with MS is the distances. Anything over 1800 km here is rare but does happen occasionally.

Breaking the 2000 km barrier is almost impossible and needs help. I have only had a couple of instances of this and I am sure it must be the result of some kind of tropospheric link-up. There was a brief and unexpected spell of Galician tropo on the 25th in southern England. I didn't get the tropo here but my only meteor scatter at that time was from La Coruna in Galicia - the same transmitter which was being reported down south in the tropo. My antenna was beamed south-east at the time. So tropo may play more of a part than I have previously thought, unless it was coincidence.

For you Tim (and for me too) I will record the OIRT band shortly and see if I can ID anything. There might be some guesswork involved without RDS but narrowing down the transmitters, based on distance, should be simple.

Cheers Tim.

I'm told by my opposite number at Lviv city hall that my Ukrainian is pretty good

that is a seriously awesome catch, they site all the txs in city centers and use low powers
there is no Ukrainian equivalent of holme moss etc

this means you can now try for anything in West Ukraine by Meteor now

check out my Lviv bandscan and try for them all tonight ;-)

off the top of my head 106.7 was one, if you can get RDS you'll be amused how they twist the available characters to accomodate the Ukrainian alphabet

ie: Galy4ya

yes same situation in all the former communist countries, very
efficient in terms of power outputs but dreadful for urban dxers
Warsaw was even worse than Lviv- multiple txs in city centre instead of just 1

the large West Ukrainian cities of Lviv, Ternopil, Chernavitsi,
Uzhorod,Rivne , Lutsk will likely be in MS range for you now you've
had Ivano-Frankivsk

good luck with your OIRT experiment,
66.2 BR Kultura , Hrodna is most common on meteor here

thanks for the meteor scatter presentation SN

I reckon the

I just received Decembers Reflexion Bulletin, seems i missed a
stonking tropo on 27th-28th oct when i was stranded at Paris

35573. Help with logging please ...

Yahoo group: SkywavesDX (2015)
Date: 2015-01-31 01:34:45 UTC
From: John Faulkner, Skegness
Topic: 35573 Message: 35573

Yesterday morning was very good for meteor scatter and particularly Italian signals as I had the antenna vertical, but I wondered if I might have made a mistake logged the wrong station/transmitter on 103.9. Hopefully somebody might be able to confirm either way. This is the log entry:

*103.9 0807 I Rai Südtirol, Neumarkt=Egna/Laag=Laghetti (RAS) (bz) 5404. AFs 94.2, 97.8, 98.5, 99.0 1094km ***

The problem is that, on 103.9, there are two listed networks, both of which have the PI of 5404:

Rai Südtirol from Neumarkt=Egna in the Bolzano area.
RAI Radioquattro from Trieste.

After looking at the AFs, Rai Südtirol seemed to be the correct station. But as I studied the other stations which were received during the same meteor burst I realised that the Trieste area was also being received. Neumarkt=Egna is listed with 500 watts while Trieste has 20kW. The power may be irrelevant of course and I believe I am correct in my assumptions based on the AFs.

I think this would benefit from a second opinion. Could somebody please check and confirm (or dispute) this logging? I want to make sure this is correct.

Videos of this, and other catches, are available on my YouTube page at https://www.youtube.com/user/g1vvp

Thank you.

John

Thank you very much for clarifying this Alessandro. I have amended my logging and YouTube video title.

For the record, this is my full meteor scatter log from yesterday. The 9.2 antenna was vertical to receive these. Videos of the pick of the bunch can be found on my YouTube page at https://www.youtube.com/user/g1vvp

Best wishes!

John

35577. RDS Data Logger - Beta2

Yahoo group: SkywavesDX (2015)
Date: 2015-01-31 17:44:15 UTC
From: Andy Pritchard
Topic: 35577 Message: 35577

Hi All

I've updated my SDRSharp plugin with some of the features requested such as block scanning / customisable settings, see screenshot below:

http://www.apritch.myby.co.uk/rdsdatalogger.png

Download: http://www.apritch.myby.co.uk/rdsdataloggerBeta2.zip

Andy, M0CYP - Telford

35578. A couple of MS surprises from this morning

Yahoo group: SkywavesDX (2015)
Date: 2015-02-02 00:00:49 UTC
From: John Faulkner, Skegness
Topic: 35578 Message: 35578

Received this morning:

97.3 R Øst, Sarpsborg (376 watts) 0523 01-02-15 951 km
http://youtu.be/1OcxYZTZnII

96.3 Vinyl 96.3, Gävle (1kW) 0523 01-02-15 1311 km
http://youtu.be/8_s9vZ_h0Hk

Both with full RDS!

John

35579. UNID Norwegian station. Possibly a local, 103.8

Yahoo group: SkywavesDX (2015)
Date: 2015-02-03 19:03:54 UTC
From: John Faulkner, Skegness
Topic: 35579 Message: 35579

https://app.box.com/s/6vp8um5tv38a0ievmyymckk497sgyzj8

The FDM-S2 and meteor scatter reception continues to blow me away - I have an audio recording of a presumed Norwegian local station on 103.8 at 0722 this morning during a very good burst which lasted almost a minute and mostly included reception of Irish stations - mainly multiple outlets of Today FM and Beat 102-103.

I only believe it is Norwegian because of the references to "staples n.o." in the ad break. There are two adverts in the recording. My antenna was vertical at the time.

Thanks.

John

35580. RE: [SkywavesDX] UNID Norwegian station. Possibly a local, 103.8

From: Arvid Husdal
Topic: 35579 Message: 35580

Hello John,

A great meteor scatter example !
Infact in the beginning you had a couple of Norwegian signals,
but the ads unfortunately were national, like you say, from Staples.no,
and also the new album from Marion Ravn, and P4 programme "Kjærlighet uten Grenser",
even the ID: " nå skal P4 dele ut ... "

The Norwegian jury says 12 Points, and P4, Mosvik:
103.800Mosvik/SkavlenntnoP4 R Hele Norges31.333Dh40110e57/63n46121544P4_NORGE
73!

Thank you Arvid and Sven.

When I realised this was a commercial for Staples the office company (which we have here in the UK) I guessed it must be from a larger network.

Also today I received Radio Øst from Sarpsborg on 97.3 - now two days in a row! Reception was not as good as during yesterday's early morning meteor burst. I still find it amazing that such low power stations can propagate so well with meteor scatter.

With best wishes!

John

35585. Lift waking up today

Yahoo group: SkywavesDX (2015)
Date: 2015-02-07 13:40:18 UTC
From: nick gilly
Topic: 35585 Message: 35585

Conditions are definitely lifting here today. Caen is often at RDS levels, stations to the north are up a bit and towards Essex/London way too, e.g.

103.6 BBC Northampton
103.7 BBC C&W up to 2 bars
104.3 BBC Radio Cymru
105.4 Capital Leicester
103.5 BBC Essex up to 3 bars w/ RDS
106.8 Rinse FM
99.8 London pirate with soul music
105.0 Uckfield FM

Hopefully this is the start of a decent lift. Good DX.

Nick, Whitchurch, Hampshire.

Getting the usual strong stations from London with good signal. Also a bit of France but nothing spectacular, just Musique, Culture, etc... which are always regulars. I don't know if I missed out earlier, but I am not getting anything from Belgium which according to the tropo chart would have been possible at the time of typing this. Also nothing from Germany. I will keep monitoring this evening.

I have never received a London pirate at home. Apart from a few local ones, maybe one from Brighton & also UK's Finest on 87.5 which I understand is based in Guildford. I might be tempted to take a drive to a location that in the past has given me better reception from London & other stations in the same direction.

sleeper77, Southampton.

It was stable here. Not heard anything fluttery with this tropo.

Brno is still coming in as I type though not as well as yesterday
evening when F1 104.1 PI'd. I have Usti Nad Labem on 104.5 this morning.
Liberec was also received yesterday evening. I think this is all still
to play for.

Good DX!

check for Krakow John

just a weak choppy HR3 here now :(

I heard something 'wide' on 99.4 earlier Tim. I couldn't find a web
parallel. Also something now on 101.6 but Classic FM is taking over.
It's not Radio Krakow. Not many empty channels now due to Germany having
taken over.

Most of the higher power Nassjo transmitters have been logged too.

Possible Valašské Meziříčí
<javascript:void(window.open('fi_auswahl-zeigen.php?filter=locationid&filterwert=1900209&sort=QRG','Auswahlfenster1','width=1000,height=700,left=0,top=0,resizable=yes,scrollbars=yes'))>
on 99.0 - if only Hoher Meissner would go away.

John

good luck
seems i'm on the extreme edge of this tropo, can't even get HR1 91
because crystal palace is enhanced

at one point this morning things got very confusing as the meteor and
fluttery tropo were from the same area!

It WAS Usti Nad Labem after all. The web server was defaulting to the wrong stream.

It's noise free at times.

John

All tropo now gone.

Some German transmitters increased in strength nicely around 1500.
Brocken, Torfhaus, Remda, Teutuburger Wald, Bremen, Habichtswald and
others all came back with RDS, but by 1730 everything had gone.

This lift was unusual in that I was able to receive the Czech Republic
and Sweden at the same time! Poland did not materialise. Neither did
Denkark or Norway, but I had a lot of personal transmitter firsts.

This was a very nice tropo!

35618. Band II Tropospheric Loggings for 11 February 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-02-11 23:20:44 UTC
From: Janpeter van Dijk
Topic: 168 Message: 35618

Hi All,

Another poorly times business trip caused me to miss out on most of the Band II tropo-DX fun yesterday and today.
I have been in Sweden at the Norrköping - Stockholm area. It is very odd that this is exactly the area where the most distant DX was coming from this evening!
Well, at least the tail end of this tropo spell brought in some excellent DX. And it may not be over yet, I am still getting Emmaboda.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

35622. FM DXing with new plugin RDS Data Logger for SDRsharp software

Yahoo group: SkywavesDX (2015)
Date: 2015-02-15 14:06:31 UTC
From: g.bernardini@...
Topic: 35622 Message: 35622

Ciao,
I tested the new plugin RDS Data Logger, by Andy M0CYP, for software SDRsharp.
I used my great AIRspy SDR VHF-UHF receiver.
Everything works well. So you can find a post of mine here:

AIR - RADIORAMA: FM DXing con RDS Data Logger, SDRsharp e AIRspy SDR receiver
http://air-radiorama.blogspot.it/2015/02/fm-dxing-con-rds-data-logger-sdrsharp-e.html

http://air-radiorama.blogspot.it/2015/02/fm-dxing-con-rds-data-logger-sdrsharp-e.html

AIR - RADIORAMA: FM DXing con RDS Data Logge...
http://air-radiorama.blogspot.it/2015/02/fm-dxing-con-rds-data-logger-sdrsharp-e.html
Giorno dopo giorno il software SDRsharp diventa sempre più valido. Non solo il suo creatore, Youssef, continua a svilupparlo, ma altri appassionati lo arricchiscono...

35623. Hello from Breckland! :)

Yahoo group: SkywavesDX (2015)
Date: 2015-02-17 22:19:57 UTC
From: alex_cator_mmi@...
Topic: 35623 Message: 35623

Hello, my name is Alex Cator, a DXer based in East Harling, Norfolk, England. I am based in the Breckland district of Norfolk, the second-largest in Norfolk, stretching from as far west as Oxborough (in the true west of Norfolk, not far from Cambridgeshire), as far east as Black Carr (not far from Wymondham and Tacolneston), as far south as Blo' Norton (not far from East Harling, Diss and the Suffolk borders) and as far north as Colkirk (near Fakenham), and with Ashill (former transmitter site of Wayland Radio on 107.3 MHz, near Watton) in its centre. My district is not amongst one of the best in Norfolk for FM DX from the continent, but I give it a go, and Breckland isn't too bad for it anyway.
I mainly concentrate on VHF Band 2 (the main band used for FM broadcasting) DX, particularly from the continent, which is not a rare thing in eastern England, as even normal listeners may be aware of Dutch stations as they seek around the FM band, which happens when a bit of tropo towards the continent is present. I sometimes try medium-wave DX as well, which can come from all directions at night-time, via F-layer propagation. My furthest MW DX catch yet is China Radio International (Russian-language service) from Urumqi, China, which booms in on the car radio very often. My furthest FM tropo DX catch yet is Hit Radio FFH from Grosser Feldberg (Hesse), Germany, on 105.9 MHz, which was caught on the Ford Fiesta (Mk. VII) car radio, which uses DSP (digital signal processing), resulting in selectivity performance near-enough equal to the Sony XDR-F1HD (same DSP chip??), and the catch was on the outskirts of Harleston (Norfolk), via tropo on October 28th, and Antenne Niedersachsen (Oldenburg) from Steinkimmen (nds), D (511km) was my furthest tropo catch at home, which was on my usual TV antenna, signal booster and Sony ST-SB920 tuner. My furthest E-sporadic catch was an Arabic-speaking station (Egypt maybe?) on 87.7, with a strong signal on the Ford Focus (Mk. III) car radio, when the car was on my driveway, and no RDS was there, which gave a clue it might be Algerian. It was also on my Tecsun PL-390, in stereo, and I heard 'Muhammad' quite a few times in the Arabic, and I think I heard 'Syria' in there somewhere. It could've been Radio Chlef, but it sounded like a culture station.
I also have tried DAB DX at times, e.g. I once had reception of the NOW Peterborough (12D) multiplex in the Norwich area, the same with the HBB & Northants (10D) multiplex, and both are on a YouTube video I uploaded. That was always on the Ford Focus Mk. III car radio, which is not very good on DAB, but excellent on MW and FM. I have grabbed the VRT mux from Belgium on 12A, both up the white cliffs of Dover and at the sea-front car park at the Pleasure Beach in Great Yarmouth, the latter via tropo. At Kett's Hill in Norwich, I have grabbed (via tropo) the NPO mux on 12C (silent, as this car radio only does traditional MP2 DAB and not the HE-AAC coded DAB+ standard which is used in the Netherlands) on this radio. I hope to get a Sangean DPR-65 Plus or DPR-69 Plus for DAB and DAB+ DX, as they are the best DX radios for DAB and DAB+. A normal UK radio listener would not find a DAB+ radio appealing, as only traditional DAB (much worse than DAB+) is used in the UK, with a hope that the new D2 National mux will have a few DAB+ stations on it.
My setup consists currently of two extraordinarily modest antennae: a low gain VHF/UHF antenna pointing towards the local Tacolneston transmitter (located in the loft) and a Philex ribbon wire antenna, and I use a 10dB One For All signal booster to amplify my signals. My tuners consist of a Sony XDR-S10HDiP (my most selective tuner, with the same performance as the XDR-F1HD, but I got this as it was cheaper), and Onkyo T-4970 (perhaps the first DSP tuner ever made, with Onkyo's DYNAS asymmetrical DSP system, and one of the

first RDS tuners), plus an unmodified Sony ST-SB920, which I have plans to modify with 3 x 150kHz filters and 1 x 110kHz, as apposed to the original 3 x 230 and 1 x 150. Also I have a Tecsun PL-390 portable, capable of receiving daily tropospheric scatter from Dudelange (Luxembourg), Egem (Flanders, Belgium) and Lille/Bouvigny le Mont (northern France).
I own a Triax FM3 antenna, which is currently in its box, as my family will move to another house, which will be on the hill when one enters East Harling from the direction of Watton, as apposed to my current house, located on one of the many cul-de-sacs in my village. On test in the study of my current house, it received the Lille/Bouvigny stations via tropospheric scatter on a daily basis. It is likely that that will be my vertical antenna, fixed south-east for reception from Flanders and the Netherlands, whereas my horizontal antenna will be a Korner 9.2, for everything else. At the new house, my DX results may improve a lot, and I will have an HS Publications antenna phaser for eliminating a lot of locals and semi-locals, particularly the West Norfolk and Cambridgeshire signals, which are known to be a risk in Breckland. For example, 102.7, the Rotterdam frequency of Radio 538 (Netherlands), is occupied by Heart Peterborough. My phasing antenna will be an Antennacraft FMSS. It is guessed that I will own an RTL-SDR dongle, a Kenwood KT-6040 tuner and a Ray Dees RDS Manager (the replacement of the Conrad RDS Manager) in the future.
I have been on the 'new' Skywaves DX forum for almost two months, since Boxing Day (26th Dec) 2014, and I decided to join this 'old' Skywaves DX forum to help with topics not discussed on the 'new' forum, as this one is still quite popular. You can know a little more about me, my hobby and my equipment from what I've posted on the 'new' Skywaves DX forum. It doesn't seem like DXers are encouraged to use the new Skywaves forum, as, for example, people are encouraged by lots of ads on the classic Google Maps to use the new Google Maps!

Good luck DXing, all of you,
from Alex Cator.

Hi Alex,

Thanks for the very detailed report about your experiences with various types of propagation.
It's great to read that you also seem very knowledgeable about the different modes of propagation.
I'm very much looking forward to reading your reports in the future.

I have to say that even though I've signed-up to the other forum, I still prefer this one. The other forum was initially favoured because people were experiencing problems with Yahoo! Groups (messages not being delivered or delayed etc).

You are living in a better place than me, for getting continental, particularly Dutch, German and Danish Band II & DAB/DAB+ reception.

For FM Band II, I use a 7 element, vertically polarised antenna in the loft, directed to Netherlands and Belgium. On this antenna, I receive daily signals from Egem. In the same direction is also Mendlesham, so Kiss 106.4MHz is an easy catch (even during "flat" conditions).
On the roof of my bungalow, I have a fixed, horizontally polarised, 3 element Band II antenna, directed to Lille. Again, I receive daily signals from Culture on 98.0MHz and Bleunord on 94.7MHz.

I have a Roberts Stream 83i radio (same as a Sangean) which has DAB+. This is connected to a 5 element Band III, vertically polarised, rotatable, external beam. In the past, during tropo conditions, I have received DAB & DAB+ from the likes of Denmark (channel 8B), Germany (channel 5C) and Netherlands (channel 11C).

With reference to your Sporadic E reception, Algeria is usually the first to come through. The clues are very high/distorted audio levels, no RDS and often French-speaking.

Best regards,

Chris, Lincoln, UK (2E0NDT)

PS. There's another Alex (ACL777) who is a DXer, living in Norwich.

Kiss is one of the most popular radio stations in my area amongst the average youth, so it must be a decent signal. It is not quite as strong as the Tacolneston nationals (5 x 250 kW), but Kiss can be a pest. The Mendlesham transmitter (which I have driven past lots of times en-route to Ipswich, the Suffolk Coastal District or Essex) uses 20 kW, just for Kiss, however it once transmitted ITV Anglia on 204.75 MHz (VHF Channel 11) with 200 kW, and it also transmits BBC National DAB on block 12B with 4.3 kW, and D1 National DAB on block 11D with 1 kW.
Kiss on 106.4 can be heard quite far into the East Midlands, even though it is quite exposed to adjacent and co-channel QRM, as the band is quite crowded with locals and semi-locals there. It has got into the Netherlands via tropo (as Dutch DXer fmdxklaas, Lelystad, has received it), but the band is too crowded in Holland for flat reception.
I have received stations right next to the (semi-local) Stoke Holy Cross transmission, on my Sony XDR-S10HDiP. That includes: France Bleu Nord, from Calais/Mont d'Hubert, F, on 106.2, Heart (London) from London/Croydon TV Tower, G, also on 106.2, Heart (Yorkshire) from Emley Moor, G, yet again also on 106.2, and RTBF La Première from Tournai/Froidmont, BEL, on 106.0. Gem 106 from Copt Oak, G, got over Kiss (Stoke Holy Cross) on New Year's Eve 2014 via tropo, making Kiss unlistenable on my Sony ST-SB920, and Gem had a nice stereo signal, but below the SB920's RDS threshold, even though the PI code (C3AB) would've been visible if I used RDS Spy.
In my home village (East Harling) and surrounding areas, in my shack or mobile, I have not once been able to receive signals at 100 kHz from the Mendlesham transmission of Kiss (106.5 or 106.3), even though, in the Thorpe St. Andrew area, which is very close to and joined on to Norwich but not officially in Norwich (it is officially in the rural Broadland district of Norfolk), I have had France Info from Boulogne-sur-Mer on 106.5, as SHC (106.1) is the main TX over there, and Mendlesham is weaker.
I receive the Lille/Bouvigny nationals via tropospheric scatter on my Tecsun PL-390, in my house, when the antenna is horizontal, and, when the antenna is vertical, I get signals from Egem (also troposcatter). When troposcatter is active to the most, during sunset, I once got Hondert Komma Sieben from Dudelange, Luxembourg, on 100.7 MHz, also on the Tecsun. When any decent continental tropo is active, Hondert Komma Sieben gets knocked out by Q-music from IJsselstein, even though they can be separated, as Q-music is vertical and Hondert Komma Sieben is horizontal.
I wonder where your location is? My location is quite good for continental reception, which is daily in my area, although the annoying West Norfolk and Cambridgeshire locals can annoy me, as many use the same frequencies as continentals, and adjacent channels.

I'm getting Dutch radio today, here in the east of England, where it is not uncommon to receive Dutch stations via tropo or scatter. The highlight was Q-music from IJsselstein, 100.7, with RDS (83C8 Q-music_), and also a weak Radio Decibel from Rotterdam, 98.0. Quite a hissy Radio 538 from Rotterdam, 102.7, as well!
I imagine you got British radio. Did you have luck with the BBC nationals from Tacolneston?

Hi Alex,

I did not try for UK DX yesterday. Only when I start hearing something from the back of the beam, I will turn to the west. The Tacolneston nationals is daily stuff at my location, which is some 20 km from the sea shore. The other UK location that I can hear on a daily basis is Wrotham. Almost every day are Manningtree, Belmont, Peterborough, Sutton Coldfield, Swingate and Holme Moss.

73, Janpeter

35634. 200 churches

Yahoo group: SkywavesDX (2015)
Date: 2015-02-19 21:55:19 UTC
From: harriku@...
Topic: 35634 Message: 35634

Hi all,

I have been into Irish chruch-DXing again this autumn and winter.

Thanks to F2-openings there were again nice signals on 27 MHz.

I have now reached 200 identified churches from Ireland.
Also I have dozens of letters from Irish parish priests.

I have all churches listed here: http://www.parishradio.harriku.com
http://www.parishradio.harriku.com

Now all signals are gone as Solarflux and Sunspot number are down.
(No signals from USA VHF over 30 MHz this season, only once or twice.)

35640. interference on 1080 and 1134 khz

Yahoo group: SkywavesDX (2015)
Date: 2015-02-23 16:14:19 UTC
From: mvarnhem@...
Topic: 35640 Message: 35640

I suppose it was in November 2014 that I observed a nasty interference on 1080 khz and 1134 khz. Since that time the interference is audible daily.

The last week I have put a lot of time in investigating these interferences.
I was also in contact with a group of radio listeners in The Netherlands, Belgium and Germany, who could also hear the interference on both frequencies. The signals are also audible in the UK.
Now it is almost 100% sure that the interference is caused by signals of Talk Sport Radio.
It is difficult to say which Talk Sport Radio transmitter is the origin of the interference.
Also the Talk Sport transmissions were checked on their frequencies 1071 and 1089 khz, but no strange signals can be heard.

I made some recordings of the interference which you can hear on the following link:

https://app.box.com/s/14bw8iwbllfp10iy081d8t66hz4wbxll
https://app.box.com/s/14bw8iwbllfp10iy081d8t66hz4wbxll

Characteristics of the interference:
Frequencies : 1080 khz (best audible in Lower Side Band) and 1134 khz (best audible in Upper Side Band, but also in Lower Side Band)
Direction: In The Netherlands, Belgium and Germany the strongest signals of the interference can be heard on north / north west antennas.
Hours of reception of the interference: The interference can be heard in The Netherlands, Belgium and Germany during the hours of darkness; remarkably, the signal sometimes disappears but returns after a short while; maybe that has to do with propagation.

Now the question is which transmitter of Talk Sport is causing the interference.
Nearby frequencies are 1071 (two low power stations) and 1089 khz (several high power stations and also some lower power stations) .
As you may know Talk Sport carries local advertising so if it was possible to match the interference to adverts on a particular regional transmitter it might be possible to work out where it is coming from.

Because of reception conditions here on the mainland, it is not very easy to find the transmitter which gives the trouble; so, I would like to ask the UK DXers to check their regional frequencies of Talk Sport and the affected frequencies 1080 and 1134 khz, especially also at daylight and not only at darkness.
I hope you can report your findings mentioning your location, also when you don’t hear the interference. As mentioned before, the signal sometimes disappears but returns after a short while, so if you don’t hear the interference, do listen again somewhat later.

In this way we can probably find the faulty transmitter.

Hello Ruud,

I don't know what you mean. I have played those files many times at different bandwidths. The software buttons "Wide" ,"Normal" and "Narrow" can all have the bandwidth varied by the user. You can see me doing that in the videos.

FM+ software needs a wider bandwidth to grab RDS than RDS Spy. Please suggest some optimum settings for FM+ and I'll do another comparison video.

regards

Peter

35656. Test Post

Yahoo group: SkywavesDX (2015)
Date: 2015-02-27 11:40:28 UTC
From: John Faulkner, Skegness
Topic: 35656 Message: 35656

Sadly necessary thanks to the evils of Yahoo.

I wanted to redirect my yahoo email forwarding away from my personal email address and to something less important. While in the settings I noticed that Yahoo had changed a few things. They now insist that our email addresses have to be displayed to everybody, otherwise they won't allow us to post to our groups.

I wouldn't have known this had I not gone into the settings. Having had my post settings set to "Do not display email address" for a while, or so I thought, Yahoo have changed this to publically visible without me realising. No wonder my spam levels have been on the increase.

I thought I should inform everybody as some members may be unaware of this. So if you are using your personal email address rather than a yahoo or hotmail, etc. account, you might want to change it quickly.

Good old Yahoo! Nice of them to tell us.

John

35663. FMLIST and audio clips

Yahoo group: SkywavesDX (2015)
Date: 2015-03-01 19:28:29 UTC
From: ilkka suni
Topic: 35663 Message: 35663

Hi folks,

Sorry to bother you with my thoughts.

I FINALLY DECIDED to start uploading my
[primarily MS] audio clips of the stations that
have QSLed to me, onto the FMLIST database. A
question popped onto my mind, and yes, I know I
may now sound paranoidically oversuspicious.

Those of you, having uploaded your audio clips
publicly available, have you ever noticed your
clips would have been abused, misused? After all,
we do have had this case Bellabarba. It would be
so easy to hoover audio clips from the internet
and pass them on to radio stations, one claiming
having received the very broadcasts by oneself.
.

I JUST NOTICED, there is no choice to label one's
clips with time stamps such as 00.00.2015, 00:00
hrs, when uploading to the FMLIST database. I
wouldn't know how Jürgen and others moderating
might think about this kind of option. I think,
it would be handy. Gosh and after all, I
sometimes permanently miss the time stamps of my
audio clips. One also might take in consideration
the possible abuse of audio clips.
.

Hi Sudipta,

Thanks. There are many more photos to come, it just takes a long time to get them all scanned and edited! I was very keen on low VHF in the 80's and 90's, TVDX, 50 MHz and scanning low VHF. During F2 reception I am sure I often received a police net in India around 36 MHz, I have not kept all the logs so I can't be sure of the frequency.

Hi Ruud,

Thanks for the comment. Yes I will be adding more information to the photos as I get time. There are a lot more photos to come - in fact I have spent this evening scanning a lot of old negatives. Once I have edited all the photos and put them on Flickr I will add more info. Once all that is done I can start on my collection of old UK analogue TV, even the old 405 lines stuff! But all this will take a long time as I have a full time job!

Regards

35688. Re: [SkywavesDX] Italy PI 5061 87.6 Unid

Yahoo group: SkywavesDX (2015)
Date: 2015-03-03 21:57:07 UTC
From: Janpeter van Dijk
Topic: 35679 Message: 35688

Hi Alessandro,

I think it might be only the Valdobbiadene tx using this PI on 87.6 MHz. The Verona tx on 105.4 MHz is using 5061 also. So maybe it is a regional PI for Veneto.

Something to check for when one is in the area.

73, Janpeter

35694. Re:: Distribution Amp Question

Yahoo group: SkywavesDX (2015)
Date: 2015-03-06 21:33:58 UTC
From: davebunyan@...
Topic: 35691 Message: 35694

There has been a bit of discussion on skywaves.org about pre-amps etc. To get the best signal to noise ratio a high gain / low noise pre-amp followed by an attenuator would be better than a distribution amp which has just a few dB gain.

Fringe do a mini-distribution amp the Mini4 (209 021) at around £29. It provides 7dB gain at each of the four outlets with a noise figure of 3.9dB. It is also wideband 47-790 MHz.

They also do a specific masthead preamp the VHF 1220-FM (204-021) at around £17. This has a noise figure of only 1.8dB and a gain of 20dB. Use this in conjunction with a shielded two-way splitter (£2 on e-bay) and an attenuator (£2.50 on ebay for fixed 12dB) you have a more cost effective solution. It will give you a better signal/noise ratio provided that external noise pick up is less than the noise of your receiver and could make all the difference for identifying a weak signal. Also less chance of out of band signals being passed through.

Rgds

David

35695. Band II Tropospheric Loggings for 6 March 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-03-06 22:07:37 UTC
From: Janpeter van Dijk
Topic: 168 Message: 35695

Hi All,

Slightly elevated Band II tropospheric conditions today. The outlook for tomorrow is good.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Friday, 6 March 2015
Band II Tropospheric Loggings:

Unidentified:

95.2 0440 F UNID. French talks. Web address/ID for RFI (Radio France International)

** Personal 'First'

There was a big increase in signals from the Brest transmitter late evening yesterday (7th), reading 58dBf on the XDR-GTK software. Take off 20dB for the pre-amp of course but that is still a healthy signal, the kind of strength where it's time to flip the antenna to vertical to look for local stations. Brest disappeared once the 9.2 was vertical, but it must have grown even stronger shortly after this as it managed to push through clearly despite the wrong polarisation.

After midnight, once vertical, local Breton stations started to appear, bringing me my largest haul from the region. The band started to resemble Land's End! I knew I was in for a long, sleepless night. Daylight was well upon me before I finally pulled the plug so I left the FDM-S2 recording.

Hopefully somebody may know who relays RFI (Radio France International) on 95.2 overnight. This one is a real mystery.

I uploaded some of yesterday's meteor scatter to my YouTube page.

From: orionz25@...
Topic: 35709 Message: 35709

Getting weak Aachen WDR3 on 95.9, also presumed WDR4 on 93.9. It has been France & a bit of Belgium so far during the last few days of tropo at my location, so Germany would be very nice for a change.

sleeper77, Southampton

Yes France is still up a bit here as well. I tried for Germany about 20 minutes ago and briefly heard a very weak WDR 4 on 100.5.
Did you have the big opening to Brittany on Saturday night there?
 Good DX.

Nick, Whitchurch, Hampshire.

Ai ai ai, this site is in big trouble.
The (French) person behind this page is spamming Google and the cyberworld with old, outdated and structurally misleading data for many years now. No way to stop him. Not only for Italy. If you want junk FM data for Europe, follow him. He has no idea of real facts, but he knows how to earn some money from Google.
So if everyone now clicks on his link, he will get some money, but none of the clickers will earn knowledge. Gentlemen, make your choice!

As per FMLIST, the correct location is Cesena-Tessello/Monte dei Feriti (FC). The tx has moved to 104.0 MHz in December 2014.
FC is the acronym of Forli-Cesena province.

73,
Günter

Too right, I absolutely loved it especially during the sunspot cycle peaks when the MUF rose up to E3, even E4 occasionally. Once I have finished editing all the photos to go on Flickr I have hours of tapes to go through and digitise as well, IF I can find a working Philips V2000 format VCR! Keep watching the set on Flickr, there are quite a few more countries to go on, The old West Germany will take me a long time with all its regional stations and so many different TCs!

All the best

Tim

Hi Janpeter,

I spent some hours in Pordenone today and I can confirm that Easy Network has PI code 5361 on 87.5 MHz from Aviano-Bornass (PN).
The same PI code on 87.6 but I think that the received tx is Attimis-Porzus (UD).

Subject: Re: [SkywavesDX] Italy PI 5061 87.6 Unid

Hi Alessandro,

I think it might be only the Valdobbiadene tx using this PI on 87.6 MHz. The Verona tx on 105.4 MHz is using 5061 also. So maybe it is a regional PI for Veneto.

Something to check for when one is in the area.

73, Janpeter

35736. Re:: HS Publications Antenna Phaser

Yahoo group: SkywavesDX (2015)
Date: 2015-03-15 20:04:45 UTC
From: alex_cator_mmi@...
Topic: 29685 Message: 35736

As I have mentioned on the 'new' Skywaves forum, I often find it difficult to receive certain continental transmitters, due to 'interference' from the United Kingdom. In this conversation, 'interference' means unwanted radio stations. A classic example is Heart Cambridgeshire, on 103.0 MHz, from the Madingley transmitter near Cambridge, 66 km from my QTH, with 1 kW. That signal is capable of causing serious problems when I try to listen to Q-music from Egem, BEL (223 km with 20 kW), on the same frequency, which could be a daily tropospheric scatter and/or aircraft scatter signal in my location, East Harling (near Attleborough, Norfolk), as VRT Studio Brussel on 102.1, from the same site with 40 kW, most definitely is, particularly under high pressure conditions, and sometimes with RDS.
My antenna is a Triax FM3 Yagi with three elements, indoors, and I adjust the direction/polarisation in accordance to the radio station I'm listening to. I have occasionally been able to listen to VRT Radio 1 from Egem on 95.7, with the Triax beaming around 110-140 degrees vertically, despite BBC Radio Cambridgeshire from Peterborough (87 km away, with 5.2 kW) on the same frequency, via tropo, but the adjustment is just so difficult. I feel like I could do with an HS Publications phaser, because these British stations cause problems. Seriously, I feel like moving to the east coast, somewhere around Winterton-on-Sea, as they have a much quieter FM band with hardly anything there. But, I just stay where I am, but I will get that phaser.
My phasing antennae will be two. It is guessed that I will have an Antennacraft FMSS omnidirectional, and a Triax FM3, as my phasing antennae, and my DX antennae will be a Korner 9.2 (horizontal) and Antiference FM5 (vertical), all with Hygain AR-35X rotators.

So many stations coming through via aurora, including Brest and Nantes, but I seem to have Toulouse on 87.9. It's France Inter and I cannot see which other transmitter this could be. I have to beam north-east to hear these. Audio is very scratchy.

Good DX!

Regarding my reception of Toulouse on 87.9, I would have thought this to be too far south after looking at the propagation maps, but I see that F5GHP, half way down the western side of France, is working into this. Nick G suggests that my 87.9 could be St Brieuc. That does seem likely given the area of propagation, i.e. Brest and Nantes, but St Brieuc is only low powered. Everything I have identified so far has been high powered. So I wonder who 87.9 really is. Hopefully I can clarify later after I have studied more reports.

Good DX!

No chance of that here Hannu. Total cloud cover here. "PROPER"
astronomical event-viewing weather. The same is forecast for the solar
eclipse on Friday. *******'s Law wins as always.. Nothing will ever
change. Grumble, grumble. :O(

The AuEs didn't last long and had disappeared by the time I had posted
the alerts so nothing was logged. I heard Finnish on 88.0 and there were
carriers visible on 88.5 and 91.1. About five minutes after this, some
weak Auroral signals re-appeared but were short-loved too.

Hopefully this isn't over yet.

John

I was wondering about Joutseno. It's one of the most regular Finnish transmitters here via any form of Es. 88.5 would probably have been Anjalankoski, which isn't far away from Joutseno. Not sure who 91.1 was.

The 91.1 would be YleX Pihtipudas, 50 kW.

BTW, see Andy's logging of 2100 UTC, for reference.

Right now, I have 92.4 Stockholm [60 kW, 600 km], coming strong by
Aurora, so let's hope for some more Au-Es.

Hi John,

We don't have cloud, here in Lincoln, but we do have fog! I don't believe we are far enough north, to be able to see the aurora.
I just went out in the car, to a dark, north-facing road, nearby, but didn't see any aurora, just plenty of fog!
Stars could be seen by looking straight up.

Earlier this afternoon the 6 metre band was full of beacons and I also managed to hear F6HRP (Brest area), as well as many Scottish & Welsh amateurs by beaming my antenna north.

73, Chris (2E0NDT).

Excellent Chris! I was out for several hours this afternoon after posting the first alert.

The cloud cover here isn't visible now - it's obscured by fog. You couldn't make this up! I'm sure it's the Met Orifice doing this. The laws of averages really don't apply when it comes to this sort of thing, but it's been nice to receive the auroral DX earlier this evening. It's the most intense I have ever known with the whole FM band wiped out by scratchy audio from mostly the bigger UK transmitters.

I would imagine the aurora was visible at our latitude and probably even further south. Receiving Nantes and Brest shows you just how southerly this had become. Hopefully this might be covered on the news.

Cheers

John

ANY OF YOU folks ever heard the "voice" of northern lights?

This is an issue been discussed already for
decades, also amongst scientists. Many people
living in northern Finland, within the aurora
borealis belt, have stated having heard the
northern lights making sound. Still, the
phenomena has not been sicientifically thoroughly
studied to conclude whether the sound is for
real, or just by one's imagination.
.

IN THE 80's AND 90's, I took these DXing
expeditions to the utmost northern Finland,
for medium-wave NA stations and oceanians. And
by whatever, I dare state I once, amidst very
heavy northern lights, could hear this
"scratching" noise. And one almost could feel the
skin hair rising up, almost feel the sub-sonic magnetic humming.

Anyway, science never proved the northern lights
sound being true or not. Yet, for instance
researchers of the finnish Meteorogical institute
have audio recordings with the Aurora Borealis noise:
yes, there is a certain sound being heard, yet
what the heck is it that makes the sound?
.

ANYWAYS, THIS afternoon having passed and night
is one of the strongest aurora conditions, I
recall for at least a year or two. I still have
swedish stations coming in strong by Aurora.

Also, we could enjoy the rare as such Aurora-Es.
On this clip
https://app.box.com/s/217w96pe8366e7bpwe4vtywtc4yq23kv´
you can hear
92.4 BBC Radio 3, Swingate [11kW,] and further on,
Radio Leeds [5.6kW] w pops, both around 1990 km from my QTH.
On the clip, there's the swedish SR P1 [60kW, 600km] in distorted Aurora.

The clip was recorded 2015-03-17 at 20:54 to 20:56 UTC..
.

I have not heard it called as such, but I have heard reports that people
have heard the sound of the northern lights. I also understood that it
had neither been proven or disproved.

I had an MRI scan in hospital last year and I was told that it would
cause no discomfort or even sensation at all. It actually hurt when I
was in the tunnel. My wife also had an MRI scan for a different
condition and she reported the same. Muscular aches and pains in our
necks and upper backs. Even pain during the MRI scan itself. I don't
know if that's entirely relevant but there it is for your interest.

Auroral conditions returned with a vengeance before midnight. Several
German stations were logged. Also Denmark.

Meteor Scatter:
I only had time to go through one of my overnight meteor recordings. The auroral event dominated the rest of my radio day. As it happened, there were lots of corrupted files anyway.

Aurora:
The auroral activity at the beginning of this evening came from the north-east. Later on in the evening it had moved to the north-north-west. These made a huge impact. When I first tuned to the FM band I was amazed to see signals on all frequencies, but they were mostly a complete mess with lots of distortion, just like you'd hear when narrowing the IF too much. What a mess! There were BBC national transmitters on every frequency from 88.1 to 94.5. Even Tacolneston was messed up. Belmont was the only transmitter which was left untouched.

Occasionally, a continental station would take over. Each one a high powered transmitter. I knew it must have been a powerful auroral disturbance because I was receiving the Brest and Nantes transmitters, both from the north-east, which was really bizarre to say the least. Beaming south-west, directly towards them, produced only a glimmer of the signals off the back of the beam.

The highlight was when an outlet of France Inter appeared on 87.9. There is uncertainty as to which transmitter I received, but I believe it was more likely to be Toulouse. Such southerly auroral conditions are quite rare, but even North Africa once saw a visible aurora in their northern skies one year. I forget which. The only real alternative to the Toulouse transmitter, as Nick Gilly pointed out, would be St Brieuc in Brittany, not too far away from Brest and Nantes, but St Brieuc is only 200 watts and that might also be unlikely because of the low power. So which one did I receive? At the same time, DX Maps was showing a French radio ham, half way down the western side of France, working into the auroral conditions. Even a ham in Croatia was able to get in on the action, so I still strongly favour Toulouse, though there is no way of

knowing for certain.

Auroral Es:
There were auroral Es just before 2100 but they were very shortlived.
Finland appeared on 88.0 but was only audible for two or three minutes.

Tonight's Visible Aurora:
Pah! You can guess the outcome of that one.

Good DX!

I was not on the band yesterday on aurora-opening, but this reminds me of the year 1989-1990's
heavy bursts.
At that time we had a lot of free frequencies on FM in Finland.

The aurora was so intense that I heard two 160 Watt local stations from Oslo: Topp Radio 106.8
and Radio Nova 107.7 MHz for many hours non-stop. The audio was even readable to id - and defenately it was distorted aurora audio, not Au-Es.

Usually the same stations reflects on different QTHs. SIBC 96.2 (Shetland Isl.) was very common
in MW-Finland via auroras.

At that time here mostly Swedish, Poland, North German and BBC high-powers. Usually it started
from the East ending to UK, but not much Russians on CCIR 25y ago.
The most interesting for me is Radio Noord-Holland 93.9 with aurora giving local id.
(France still not reached via aurora or tropo in Finland)

What a nice program! Thank you for informing us Jürgen.

I remember those years very well. Living near the city of The Hague, I could receive Radio Centraal and Hofstad Radio easily. As well as countless other pirate stations. In fact, I had my own illegal FM transmitter. But using it for QSO-ing only.
Pirate radio-ing was extremely popular in those years. There were thousands of them. Doing FM broadcast DX was difficult with all of the pirate QRM. And there were also the pirate stations from Belgium, running very high power. In case of tropo towards Belgium, the band became a mush due to so many stations interfering.

Regards,
Janpeter

Typical eclipse-viewing weather here i.e. total and thick cloud cover. It did go gloomier at the height of it though, like the light was going from March to December. Sun has come out in the last 20 minutes or so.
 Good DX.

We were very lucky, here in Lincoln, UK. Following a gloomy couple of days, with solid and thick cloud cover, this morning was a complete reversal. We were bathed in sunshine and had clear blue skies.
It was quite weird having the sun fully out, but needing headlights on while driving the car. As Nick said, it was rather like mid-December as regards daylight amount, during the peak of partial totality (at about 9.33am GMT).

John Faulkner (Skegness) has taken some very good photos (see his Facebook page). He also wasn't expecting the weather to behave, judging by his earlier comments.

Chris.

I had given up all hope of seeing the eclipse after seeing the updated Met Orifice forecast, predicting that we would have sunshine here this morning! Against all odds, they were correct and we had a clear view of the whole of the eclipse in cloudless blue skies. Well done the MO and credit where credit is due. (Or maybe they were just lucky ;O) So we were very pleased.

It was an unusual light, or lack of, when the sun reached the maximum eclipse state. Any darker and it would have been necessary to switch on the lights. Hopefully we will be as lucky with an aurora one night.

Best wishes all.

John

I missed this part of your message, Chris.

At the beginning of the week, the MO weather forecast for Friday's eclipse said the entire east of England would be covered in cloud due to the easterly winds picking up moisture off the North See, but there was an update Wednesday evening's forecast suggesting that there might be holes in the cloud here. Then Thursday's forecast said there could be lengthy sunny periods along the east coast and the Midlands. Quite a different forecast from the one at the beginning of the week, so we really weren't hopeful. Luckily it all came good.

Glad you caught the eclipse too Chris. I know Nottingham also saw the eclipse, as did other parts of the Midlands/West Midlands, but southern England suffered in places, particularly in the London area.

John

Yes, that was very interesting to see, really. There were thousand of pirates
in Holland, like the DXers there remember very well... In the countryside mainly
on MW (mainly NE Holland) and cities on FM + 27 MHz CB with illegal power.

I was at school at that time (end of 70s) and I tuned Dutch MW-pirates very often
in the evenings in Midwest Finland. I identified over 400 stations. I posted letters
to the stations and I got almost 200 replies. Some letters, photos, stickers are
scanned here: http://www.harriku.com/piratenzenders.htm
http://www.harriku.com/piratenzenders.htm

The stations over 1600 kHz had no contact-address, so I made a list of stations
and asked in every letter their home addresses. Then I made a short reel-to-reel
tape and wrapped it around cardbroard and posted it. Cheap way to send the

recordings in a letter. At that time it was a big thing for them to reach Finland!

This little transmitter/station from Hardenberg for example was big thing to hear:
http://www.harriku.com/images/vaderabraham1.jpg
http://www.harriku.com/images/vaderabraham1.jpg
And this lady-pirate's reply from Elburg (Zendster Bel-Amie):

http://www.harriku.com/images/vaderabraham1.jpg
http://www.harriku.com/images/vaderabraham1.jpg

One nice QSL I got 33 years after listening! It was lady-pirate from Oude Pekela,
NE Holland. She was on the air weekly on 1620 kHz "met plaatjes" around 1976>.
Her friend found my old recording from my page in 2009. The result was a QSL!!
Here is that QSL and a photo when she is writing it to me in year 2009:
http://hkdx2.blogspot.fi/2009/10/female-pirate-qsl-after-33-years-of.html
http://hkdx2.blogspot.fi/2009/10/female-pirate-qsl-after-33-years-of.html

The end of the 70s I was also active pirate, but closed because all my friends
around Finland (8-10 stations) raided with heavy penalties. We were mobile,
on the air from woods etc, so no raid.

That's it of that topic.

Wow Harri, what a nice web page! And written in perfect Dutch also! This can't be a google translation.

Unfortunately the second link you have posted is identical to the first link. And the third link doesn't work.

I have heard a lot of these MW pirates in the past, but somehow they did not trigger my interest. I guess it was not so much of a sport, with the band above 1600 kHz always jam packed with stations.

I have not tuned the MW band for a very long time. Are these pirates still active? On the FM band there are still a lot of pirates, sometimes with up to 100 kW ERP. Most of these are located in the east of the country. In my area the number of pirates these days is very small. Most of them are active during the weekend only, but not all weekends. Which is understandable. If you are caught now, you will have to pay a high fine. Or even go to jail if you are a recidivist. On the other hand, I think that the chance of being caught is still not very high nowadays.

73, Janpeter

Onderwerp: Re:: Re: [SkywavesDX] look back on Dutch pirate radio

Yes, that was very interesting to see, really. There were thousand of pirates
in Holland, like the DXers there remember very well... In the countryside mainly
on MW (mainly NE Holland) and cities on FM + 27 MHz CB with illegal power.

I was at school at that time (end of 70s) and I tuned Dutch MW-pirates very often
in the evenings in Midwest Finland. I identified over 400 stations. I posted letters
to the stations and I got almost 200 replies. Some letters, photos, stickers are
scanned here: http://www.harriku.com/piratenzenders.htm

The stations over 1600 kHz had no contact-address, so I made a list of stations

and asked in every letter their home addresses. Then I made a short reel-to-reel

tape and wrapped it around cardbroard and posted it. Cheap way to send the

recordings in a letter. At that time it was a b ig thing for them to reach Finland!

This little transmitter/station from Hardenberg for example was big thing to hear:

http://www.harriku.com/images/vaderabraham1.jpg

And this lady-pirate's reply from Elburg (Zendster Bel-Amie):

35800. Algeria 153 kHz ???

Yahoo group: SkywavesDX (2015)
Date: 2015-03-25 09:39:26 UTC
From: Günter Lorenz
Topic: 35800 Message: 35800

While Sergio Sarabia from Spain reports that Algeria 153 kHz is inactive, on SDRs all over Europe, three distinct carriers can be seen on 153 kHz.
Obviously, Romania dominates the channel, and the Norwegian tx is also visible below 153.000. The third carrier, very close to nominal, shows distinct fades, so any local QRM can be excluded. It seems to operate 24h.

Offsets: http://www.mwlist.org/mwoffset.php?khz=153

One theory is that Algeria is on air, but without or with very low modulation.
Otherwise, there must be an unknown tx on 153, or a mixing product with a very wide "coverage".

Any thoughts / observations are welcome.
Two screenshots taken in Central Europe are availabe here:
http://www.mwlist.org/public/4_carriers.png (March 11, 2015, 14:22 UTC)
http://www.mwlist.org/public/153_why_fadeout.jpg (March 10, 2015, 17:41 UTC)

Thanks Paul.

There are some new clips of Chennai Tropo with clear IDs, as well as Sri Lankans. I recorded audio from my Sony ICF-SW7600GR and added captions. The Sony is actually more sensitive than the Tecsun and has better audio. Fortunately my very strong locals are from 87.9 to 91.0MHz, so above about 93MHz the Sony is without images and overload.

Tropo conditions have ended here for now.

Shame I'm still not in the habit of hitting the REC button first or I could have given a much better idea of the station involved. Still what I have is the closing credits for the programme segment ending in "Feature Story News" followed by a song. I picked up the transmission around 20:00 on 25 Mar 2015 when I had time to do a bit of listening. Didn't seem to be local as initially there were a couple of deep fades almost to the noise. It had displaced Fr Musique although the latter was breaking through. Part way through the song it fades and there are bursts of noise - which is what I would associate with SpE. An internet search reveals that Feature StoryNews - based in Washington DC provides news feeds to many stations including RTE and Capital FM (UK) to pick out a couple.

Aerial was beaming slightly north of east - but it was also coming in on the vertical. Any ideas anyone? I'd like to think it's RTE as I doubt a pirate or community station would be buying in from FSN.

https://app.box.com/s/zvzp053ho0bvtya2nkn20fv2j31word1
https://app.box.com/s/zvzp053ho0bvtya2nkn20fv2j31word1

The bursts of noise around 3 mins in might have been me switching aerials - I know I switched aerials to check early on - but not if I did it in the recording.

Hi Dave, I heard american EE on 88.7 in Suffolk in July 2005, couldn't ID it

I was listening to RTE yesterday they didn't take US news at 20:00
plus RTE 88.7 is mega rare, not sure if i've even had it in Aberdaron

some of the UK Community stations take US feeds but none are on 88.7

Faza 97.1 in notts take a US news provider for some reason

Preston FM 103.2 take US based "democracy now" or "the west is evil,
we love Putin now" - as they should call it ;-) it has US presenters

Mike in the USA,

Oh har! har! har! At least Tim Bucknall came back with some sensible comments. Just to put you in the picture - Belgium and the Netherlands are only 100-200 miles away and AFN has transmitters in both countries. And I've even managed AFN from Wiesbaden with RDS.

I would be happy to find out it is/was a semi-local pirate being received through tropo enhancement - which is what I tend to think it was as it was similar strength on the vertical and horizontal.

Tropo enhancement doesn't have to be mega distance either. The 25 watt community stations 20-30 miles away can come up quite nicely at times as do the 100 watt coastal stations from Belgium. It's just the puzzle of a station like that relaying essentially American news.

I suppose it could be a North Sea oil rig relay - but tropo conditions in general weren't that good and power would be low.

Then it could be some 'dumb dumb knucklehead' over here playing with a pirate transmitter and relaying something random. Which still raises the question of the original source. I must say I have noticed some pirate activity popping up at the low end of the band for a day of so before disappearing including Max FM with a pi code of EF44

Not sure if I can be bothered to ask FSN to give us a clue as to who was taking the news feed at the time.

Thanks for the laugh

David

Hi Tim,

I'd say all the oil platforms are North East of here but a good deal further away from me than from JF - and unfortunately it turns out the was a bit south of east - misread the dial. Easily done in my case 'cos its 90 deg offset so I don't keep have to spin the aerial 340 degrees to get NW or NE bearing.

Meteor conditions are very poor here. I see very few bursts over the last few days and only an occasional burst strong enough for RDS. These are the worst MS conditions I have known in the five months I have been MS DXing with the Elad FDM-S2.

The directions I have monitored over the last few nights, north-east and south-west, vertically, are hardly the most conducive for good meteor scatter DX, but I would have hoped to hear more. So I will monitor to the east overnight with the 9.2 horizontal and I will log everything I identify and report back tomorrow evening.

I plan to move away from overnight meteor scatter recordings soon as I want to concentrate on sporadic E. We're getting close to the season now :) Let's hope it's a good one for us all.

Good DX!

John

** Personal Skegness 'First'

Here's the full picture of meteor scatter overnight here from yesterday morning, April 4th.

After a few days of minuscule meteor scatter, a small improvement. These are mostly the most regular of regulars, but I logged everything I could identify to give the full picture. However, I am not seeing the hundreds of random meteor pings I usually see. These are the sort which are far too weak for RDS. It really is very quiet for meteor scatter. All 'firsts' were from regular transmitters already received elsewhere.

For the record, I tend to record six hours of each quarter of the band overnight, then I run SDR File Analyser to highlight the meteor bursts so I can go straight to them in the recordings. It's a much quicker process than you might expect, but after the April Lyrids and Eta Aquarids I will probably skip meteor scatter for the duration of the Es season. I need more hours in the day to do both :O)

Good DX!

Hi All,
Just re erected the Band I antenna ready for the Sp E season.
Receiving plenty of MS pings on 49.750,000 Mhz from Belarus. Understand Belarus will be all analogue switch off by May 15th ?
Also receiving 49.749,975 St Petersburg and 49.739,455 Mhz which I think may be Ukraine down from .511 last year.
So I guess Russia , Ukraine and middle east (?) will be the main targets this year.

Best Regards

Hi John,
congrats on the phasing set up and the various sdr enhancements to your set up.

was at Carsington water yesterday, i noticed a definite gain
enhancement on meteor reception, like when we went to spurn point

Had a stonking long ping of pop mx on 99.1 (sadly just below rds
level- but a better rx would have grabbed it) and that was during the
afternoon which is normally the dead period for meteor

on tropo scatter, had a poor but totally stable black hill 95.8
oddly 2BR on 99.8!
3 way pile up on 103.5 BBC Essex, wiltshire and an unid playing cont.
motown mx any ideas on that last one?

at the other end of the technical scale from Johns SDR, if anyone goes
hilltopping on weekends i must recommend one of the most useful tools
for ID'ing BBC locals ..... the sports
pages of the newspaper!
the fixtures list is absolutely invaluable for id'ing stations
carrying football!
I will never leave home without it again :-)

F2 MUF at Carsington water was 34mhz to cyprus, Tierra Del Fuego radar
on 32.55 was present but very poor

today at Beeley Moor nr Matlock the MUF was struggling to reach 30.51
(akrotiri radar)
and that was with the height advantage and zero man made noise.
(mounted the aerial on forestry commision gate to reduce qrm from cars
electronics)

today the Stanton Moor spurious was the strongest its been since 1998
when we first id'ed it (confirmed its really there on the icom rx- it
passed the attenuator test)
wondering if its related to water layng on the ground?
I got RDS off it for the first time in about 16 years
anyway if it reaches these levels again our friends outside the UK
should definitely look for it during e skip to England
its on 106.8 and carries the audio of BBC Radio 1

Raaj FM has been radiating a blank carrier on 91.3 for 2 days now!

BBC WM had dead air for 6 minutes this afternoon, there didn't seem to
be anything else on the channel sadly

rough carrier on 91.798 this afternoon

all the best

35831. SDRSharp RDS Data & Signal Strength Loggers

Yahoo group: SkywavesDX (2015)
Date: 2015-04-05 20:24:06 UTC
From: Andy Pritchard
Topic: 35831 Message: 35831

Hi All

There have been a number of updates to the RDS Data Logger Plugin (see screenshot):

http://www.apritch.myby.co.uk/rdsdatalogger.png
http://www.apritch.myby.co.uk/rdsdataloggerBeta12.zip

I have also created a new Plugin called Signal Strength logger which will log the signal strengths of specified (SignalStrengthLogger.csv) stations. This is useful for studies of different propagation types such as grey line propagation. The data is saved to SignalStrengthLogger-yyyy-mm-dd.csv daily files

http://www.apritch.myby.co.uk/SignalStrengthLogger.png
http://www.apritch.myby.co.uk/SignalStrengthLoggerBeta3.zip

At a guess, your pop station on 99.1 would most likely be Antenne
Steiermark from Graz. This transmitter is a regular on meteor scatter.
If not that then perhaps PR3 from Olsztyn?
<javascript:void(window.open('fi_auswahl-zeigen.php?filter=locationid&filterwert=6400215&sort=QRG','Auswahlfenster1','width=1000,height=700,left=0,top=0,resizable=yes,scrollbars=yes'))>

Counting the days now for the Es.

Good DX!

35834. video of JF's Geminids IQ file

Yahoo group: SkywavesDX (2015)
Date: 2015-04-08 04:34:26 UTC
From: pe1etr@...
Topic: 35834 Message: 35834

Having re-located from slow speed Myanmar to high speed Thailand, I've at

last been able to d/l this file and make a quick video. For newcomers to

SDR/FMDX, you will quickly see the benefits of being able to record a chunk

of RF spectrum for later analysis. You will see I'm playing the same time

range over and over again, corresponding to an overdense meteor burst. I

used the "pause' control in Bandicam for ad hoc editing.

Analysis of an Elad FDM-S2 IQ WAV file of FMDX Meteor Scatter recorded in

Skegness UK during the 2014 Geminids. I used HDSDR and RDS Spy.
I wanted to see if my laptop can cope with the CPU load, and it can :)

http://youtu.be/nciLK3VgkLk

I've also been able to d/l the Elad SW but it is a bit of a learning curve

so I need to play with it a bit more before uploading a video.

35841. Few SDR related questions (HDSDR, Perseus (with FM+), Studio1 and SDR Console)

Yahoo group: SkywavesDX (2015)
Date: 2015-04-09 20:06:04 UTC
From: Hannu Piirainen
Topic: 35841 Message: 35841

Moi, on behalf of one finnish guy who owns SDR Play (and Perseus with FM+ and Studio1) few questions if someone knows..

1) Does HDSDR wav file(s) include RDS ?

2) HDSDR audio file (recorded with SDRplay) does not open with Perseus (and FM+ downconverter) even the the format selected as Perseus. Is this normal or situation called as not a fault but a "feature"..?

Mielenkiintoista on se, ettei HDSDR:n file aukea Perseuksen FM+:lla, vaikka siellä nimenomaan valitaan formaatiksi Peseus.

Ja SDR Consolen wav ei aukea Studio1:llä.

Eli mun valinta on HDSDR tallennukseen ja Studio1 tallenteen kuunteluun

Answers 1) Yes all HDSDR IQ WAV files include RDS (and stereo even though HDSDR does not decode stereo FM)
2) I suspect you meant IQ WAV recording not audio? if so, then yes, you can choose the file format as Perseus when you make the recording, providing the hardware can give exactly a Perseus (2MHz, 1MHz etc) bandwidth.
3 SDR Console can record IQ WAV files in "standard" Winrad format so they can be played back on Studio 1 and HDSDR (I don't have Studio 1 to check this, but they play in HDSDR)

not sure if i'm thinking of a different file now
i thought 14/12 was the one full of Poland?

can anyone suggest whats going on with the unlisted PR2 on 103.9?
image/switching error?

i use software without RDS but its // with the other PR2's and its
carrying the same historical play I heard when i was in Warsaw in sept
- not just the BBC who have repeats apparently ;-)

Hello Tim,

There is only one 14/12 file, and there are a lot of Poles.

Peter

2-bar signals on the Denon tuner to Caen, Cherbourg and recently Alençon on 88.0, but more interestingly, a small handful of lower-powered verticals:

87.9 Fun Radio Yvetot
88.2 RCF Le Havre fair mono
101.8 Virgin Radio Normandie Le Havre (this one had me scratching my head for a while) Good DX.

Nick, Whitchurch, Hampshire.

Kenwood L-1000T, Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, horizontal Körner 9.2 beam (Antennenland version), Yaesu G-450C rotator

Excellent pictures.

Unfortunately analogue DXing is fading very rapidly worldwide. I wonder what I can still get this season. Hungary used to be a regular visitor at my location but now as I understand it is no more.

sleeper77,

Southampton.

Yes I am reading this! Thank you for your kind comments, I am glad my enthusiasm was passed on to at least one person. I am still annotating all the TVDX photos mentioned below. When I have finished those I shall add a few 405 lines DX pics as well. I kept a 405 lines/VHF TV running until the end of that system! BBC1 Scotland was DX, after all it was as far away from where I lived as some of the German TXs.

Tim

35858. Norway FM closing

Yahoo group: SkywavesDX (2015)
Date: 2015-04-20 19:32:59 UTC
From: g1mxp@...
Topic: 35858 Message: 35858

Norway will become the first country to scrap FM radio after it announced final plans to switch to digital radio in the next two years.The goverment said in a statement that it will make the transition to Digital Audio Broadcasting by 2017, following up on a 2011 government proposal. It will be the first country to do away entirely with FM radio.
Despite rumours, the 88 - 108 mhzs band will not be allocated to amateur radio
The move will allow for roughly 40 national channels, including 22 already in use, compared to five national channels on the FM system. Transmission costs are also eight times more expensive on the FM network than the DAB network. “Radio digitization will open the door to a far greater range of radio channels, benefiting listeners across the country,” Minister of Culture Thorhild Widvey said in a statement. “Listeners will have access to more diverse and pluralistic radio-content, and enjoy better sound quality and new functionality.”

This is shocking news.

Surely low power Norwegian community stations will remain on band 2,
won't they?

Hello!

Yes, low powered community radio will be left on the FM-band.

I think Norway is making a huge misstake as probably Sweden nor Denmark will switch over to DAB+.

Phew! That's something Chris.

Are there any opposing organisations trying to fight this switch-off? It sounds like this is all being dealt with in the same dictatorial manner we have had in the UK.

Yes, "better sound quality", of course!

Christian
Denmark use DAB+ for all the DR P4 regional Programmes, and all other DAB channels will change to DAB+ in the Future before 2018.

But I don't think there will be a switch off for FM in 2019, it will happen later.

In Norway they have more than 20 Nationwide Radio Channels with DAB+ and space for further 20 Channels. On FM there is only 5 Nationwide Channels, FM cost 200 million NOK more than Nationwide DAB for these 5 channels per Year. (That's 40 million NOK pr Channel - a lot of Money pr. Radio Channel).

Poor Norwegian victims of lobbyism!

In Sweden, like in Finland, the trend is turning away from DAB following strong negative reports by several authorities. See:

From: Christian Stödberg
Topic: 35858 Message: 35868

Sweden began with DAB 1995, the same year as UK.

In those days we had 78% coverage.

But no one bought receivers. Still no one buys receivers for DAB. Sveriges Radio is transmitting for deaf ears.

2004 the former minister of Culture, decided to mothball the nation wide DAB-net 2004 because of too high costs and too few listeners.

I think he made the right decision.

DAB transmissions are kept in Stockholm, Göteborg, Malmö and Luleå/Boden, 35% coverage of the population.

The listeners don’t request DAB. FM works very fine and internet radio or radio through the cell phone net are far more popular.

The radio industry wants DAB. But our Post and Telecom Agency says no. Swedish Armed Forces says no. In all 17 authorities says no to DAB and only 14 says yes. The present FM-net can be used better the reallocation.

A few days ago the Swedish National Audit Office said no with scathing criticism. They can’t even see a profitability in 50 years.

Maybe this report was the complete death for DAB in Sweden.

Sveriges Radio wants to build a nation wide DAB+ net financed by loans. SR must have 99,8% cover of the population. Note cover of the population, not 99,8% of the country. The commercial stations only have to cover 70% of the population. And you can realize where most of the cover will be.

SR pays the expansion and the commercial stations just joins without paying. If the commercial stations turns over to DAB, they don’t need to pay expensive license fees. For they this is a benefit and a possibility to start more stations with even more crap music. And that makes SR neglected.

There is a risk that people won’t buy new receivers. Why continue with a format outdated 20 years ago?
And the sound quality doesn’t impress. In Norway the authorities in fact ”forces" people to buy new receivers.

Topic: 35847 Message: 35871

That works a treat! I've now got a shortcut to the RDSDataLogger folder for each instance of SDRSharp Ihave installed.

I've been playing with this instead of DX-ing seeing how well RDSDataLogger works in conjunction with Jeff Knapp's frequency scanner.

There is no sign of RDS data hanging up and appearing on the next frequency even when using Jeff's scanner to do the work. Beta 12 would log data that was hanging about eg jumping from 107.9 to 87.5 and with Jeff's scanner would log local FM as the SDR tuned past without stopping. No sign of that happening either using the scanning facility in RDSDataLogger or Jeff's frequency scanner.

It's a definite must have for FM DXing - 24/7 monitoring for SpE outbreaks. If you live in an area where continental European stations come through regularly it can give a good picture of changing tropo conditions over a period. You can choose to use the built in scanning of RDSDataLogger - with a fixed dwell on each frequency. Or you can use Jeff's scanner which whips past the weak/quiet channels with the option for muting and set the mute level to allow anything through that might give RDS.

The only drawback of having Jeff's scanner installed is that it sets the bandwidth for you whether you are using the scanner or not - which is a nuisance if you want to pause at a weak signal and narrow the bandwidth as the moment you go off frequency it will set the bandwidth to what is in the frequency scanner's database. My workaround - a second instance of SRD# without Jeff's scanner

Being a Norwegian DX-er I kind of welcome the move. Although I am mostly into MW DX-ing I also do some amount of FM DX, especially during summertime, and this will clean up the FM-band for interference from local stations, so FM DX-ing may offer new opportunities.

The political side of it, however, is a different issue. I think it is a rather stupid for a number of reasons. But since I do not listen very much to national radio in Norway I do not really care. I have no plans to purchase a DAB radio in the foreseeable future.

Hi

Further to my earlier email announcing about the closure of Norway FM I have further news
---
FM transmitters will be closed in a region-by-region basis throughout 2017, beginning on 11 January in Nordland, and continuing through the year. The final FM transmitters will be closed in 13 December.
Many smaller, local radio broadcasts on FM will not be ceasing.
Perhaps surprisingly, NRK, the public service broadcaster, is switching their FM transmissions off before the commercial stations in most counties. Oslo, the country's capital with 1.5m inhabitants, will lose NRK's services on FM on 20 September, while commercial radio will continue on FM in the area until 8 December.
STATS FOR DIGITAL RADIO IN NORWAY *
- 56 % of radio listeners use digital radio every day
- 44 % of listeners hear only via FM radio every day
- 20 % of private cars are equipped with DAB radio
- 55 % of all Norwegian households have at least one DAB radio.
There are 2.1 million DAB radios in Norway .
- 7.9 million radio sets will be affected by FM-extinction.
FM radios can be upgraded or recycled. * Digital radio survey , TNS Gallup 2015
Thor Gjermund Eriksen, head of NRK, says: “This is an important day for everyone who loves radio. The minister`s decision allows us to concentrate our resources even more upon what is most important, namely to create high quality and diverse radio-content to our listeners.”
Several countries in Europe and Southeast Asia are in similar processes, choosing DAB as the backbone of future radio distribution.
Ole Jørgen Torvmark, CEO of Digital Radio Norway says: “The White Paper from 2011 and a unique collaboration between the radio industry is the main reason why Norway is far ahead in the transition to digital radio. Many countries are now looking to Norway to learn.

Err – what about them. If the question is what will they listen to or do in their cars then (a) listen to hundreds of local stations who stay on Band II, (b) listen to their own favourite stations via 3G/4G streaming or (c) Play i-spy….

Don’t see this as valid point. Country should not determine its radio strategy on basis on visitors in cars, surely.

hi, just an old mans thoughts

Looking back over the last 60 years of DXing I am wondering if we are going to be the last generation to enjoy the hobby
I started off the hobby by DXing on shortwaves, now i find stations are closing down, then I went into VHF TV/DX (Band 1 and 3), and find they also are all closing down, next was MW/DX and again find MW stations are closing down. Finally I went into VHF/FM DXing and guess what, they are now all closing down. What next ??
Thankfully the amatuer bands are unchanged. Like I said earlier are we to be the last generation to enjoy DXing.

Thanks Jurgen for your advice.
However, I do not think that in the future all sigs will be of terrestial origin. The DAB radio in my car has the satellite DAB channels on it, so perhaps in later years terrestial stations will move to satellite. Looks like I am going to join the ranks of DAB Dxers soon

Edward

The MF stations closing down in Europe open up better possibilities for MF dxing both North and South America, Africa, Asia and Far East. I'm hoping that Spain starts to close some more stations down following France and Germany's good work.

The assertion that all VHF/FM stations are closing down is ridiculous. So Norwegian national stations will be going - plenty of possibilities to dx some of the lower power stations then.

Regards

Stuart

Hi Hannu, folks,

IT'S BEEN STARTING to seem, us Finnish DXers are going to loose real big time, in this digital radio game. Take some 5 to 10 years ahead, most likely in Finland we still have analogue FM, whenas most of European countries already have switched to digital.

Kind of funny, yet not pleasantly. The Finnish Broadcasting Company. YLE, started DAB transmissions around the capital area already in 1995. Was it in 1996 or 1997, I purchased a Sony DAB tuner [both analogue and DAB], but I quickly sold it as I realised, this is not going to happen. In 2005, the national broadcaster seized the DAB broadcasts, as it did not happen.

As to digital TV, in Finland the switchover 10 years ago was more of a circus, with all the clowns crying out loud - or crying in pain. Those involved, afterwards stated there was three to five years wasted just in trivial dabbling. It remains to be seen, how smoothly the radio switchover goes.
.

I WONDER IF FINLAND is willing to switch to digital, before Russia does. At least where I live, in South-Eastern Finland, the band is full of Russian broadcasters, mainly with sites 47 and 162 km [up to 100 kW] away from where I live. It would be quite an awkward situation, with every household and their even ancient radio apparatuses, being able to listen to Russian broadcasters but maybe not having the digital gadgets in cars, homes and offices, for the domestic broadcasters.

Be that as it may, I don't like the foreseeable at all. My band is filled with, above all, the 4 domestic transmitters within 20 kms, and in all my band is so crowded there is no chance to DX with IF wider than 80 kHz. And in the meanwhile, analogue transmitters all around are turning silent.

Wishes for DXing DAB+ is merely fooling oneself, I think.

Hi Niels,

Thanks for the demo. I would not know whether that is common, just an exception. or otherwise a comfort.

The progress being as it is, I would find it very important, for DXers to load up their demos for DAB+ reception. Just to prove, the FM aspect of this hobby still has some hope.

 Hi Hannu, folks,

IT'S BEEN STARTING to
seem, us Finnish DXers are going to loose real
big time, in this digital radio game. Take some
5 to 10 years ahead,
most likely in Finland
we still have analogue FM, whenas most of
European countries already have switched to
digital.

Kind of funny, yet
not pleasantly. The Finnish Broadcasting Company.
YLE, started DAB transmissions around the
capital area already in
1995. Was it in
1996 or 1997, I purchased a Sony DAB tuner [both
analogue and DAB], but I quickly sold it as I
realised, this is not
going to happen. In

2005, the national broadcaster seized the DAB
broadcasts, as it did not happen.

As to digital TV, in Finland
the switchover 10 years ago was more of
a
circus, with all the clowns crying out loud - or crying in
pain.
Those involved, afterwards stated
there was three to five years
wasted just
in trivial dabbling. It remains to be seen, how smoothly
the radio switchover goes.
.

I WONDER IF FINLAND is willing
to switch to digital, before Russia
does.
At least where I live, in South-Eastern Finland, the band is

full of Russian broadcasters, mainly with
sites 47 and 162 km [up to
100 kW] away
from where I live. It would be quite an awkward
situation, with every household and their even
ancient radio
apparatuses, being able to
listen to Russian broadcasters but maybe
not having the digital gadgets in cars, homes
and offices, for the
domestic
broadcasters.

Be that as it
may, I don't like the foreseeable at all. My band is
filled with, above all, the 4 domestic
transmitters within 20 kms,
and in all my
band is so crowded there is no chance to DX with IF
wider than 80 kHz. And in the meanwhile,
analogue transmitters all
around are
turning silent.

Wishes for
DXing DAB+ is merely fooling oneself, I think.

DAB DX is amazing !My record is 900 km on a indoor 6 elements Yagi without amplifier !
More amazing logs done one day later in Germany:
Datum: 12. Februar 2015 16:25DAB Scan im Thüringer Wald. Dank guten Nord-Tropo konnten am 12.02.2015 folgende Ensembles geloggt werden:
12A - Schweden - Teracom - Stockholm/Nacka - 1081km
13C - Schweden - Teracom - Uppsala/Vedyxa - 1128km - Erstempfang
And as I remember well Norway 13A also heard in southern Bavaria which is around 1300km but I cannot find that report.

Hi Hannu, folks,

IT'S BEEN STARTING to seem, us Finnish DXers are going to loose real big time, in this digital radio game. Take some 5 to 10 years ahead, most likely in Finland we still have analogue FM, whenas most of European countries already have switched to digital.

Kind of funny, yet not pleasantly. The Finnish Broadcasting Company. YLE, started DAB transmissions around the capital area already in 1995. Was it in 1996 or 1997, I purchased a Sony DAB tuner [both analogue and DAB], but I quickly sold it as I realised, this is not going to happen. In 2005, the national broadcaster seized the DAB broadcasts, as it did not happen.

As to digital TV, in Finland the switchover 10 years ago was more of a circus, with all the clowns crying out loud - or crying in pain. Those involved, afterwards stated there was three to five years wasted just in trivial dabbling. It remains to be seen, how smoothly the radio switchover goes.

.

I WONDER IF FINLAND is willing to switch to digital, before Russia does. At least where I live, in South-Eastern Finland, the band is full of Russian broadcasters, mainly with sites 47 and 162 km [up to 100 kW] away from where I live. It would be quite an awkward situation, with every household and their even ancient radio apparatuses, being able to listen to Russian broadcasters but maybe not having the digital gadgets in cars, homes and offices, for the domestic broadcasters.

Be that as it may, I don't like the foreseeable at all. My band is filled with, above all, the 4 domestic transmitters within 20 kms, and in all my band is so crowded there is no chance to DX with IF wider than 80 kHz. And in the meanwhile, analogue transmitters all around are turning silent.

Wishes for DXing DAB+ is merely fooling oneself, I think.

A major bug has recently been reported, and hopefully has been fixed now:
When entering a log at certain times of day, the log was incorrectly considered to be in the future, and rejected.
Please let me know if you still encounter the respective error message.

73,
Günter

35897. Volcanic ashes and DX conditions

Hello,

Chilean Calbuco volcano erupted this week and has been ejecting tons of vocanic ashes to the atmosphere.

Is there any correlation noticed by the european fellow DXers between volcanic ash presence and improvement/degradation of DX conditions?

Best regards,

Log as if yesterday's date and then edit the date afterwards. It works.

This workaround works, but is not recommended, as logs are passed to DXMaps on "insert", and not updated.
Anyhow, I've removed the "future" check.

Does anyone know if there has been any changes at this tx e.g. from vertical to mixed polarisation? It has become a regular on scatter here in the last few days, with 87.8 and 104.3 sometimes peaking up well. I've just been listening to Voltage on 96.9, only very weak but easy to follow in parallel with the web stream. I have never noticed reception from this tx until very recently. Good DX.

Hi Nick,

I have been experiencing the exact same thing. A DX friend living in Northern France has passed my question about the antenna polarisation of 104.3 MHz RTL on to the RTL technician responsible for the Tour Eiffel tx. The reply was that the polarisation of the 104.3 MHz tx is vertical and that nothing had changed. My friend added a note saying that any information on technical parameters is mostly treated as strictly confidential. So he was surprised to see an answer coming back and suggested that the answer may not be correct. My own note to this is that the answer cannot be correct. I have been listening carefully to 104.3 MHz the last time there was a lift. There is hardly any signal strength difference when listening in on my vertical and horizontal antenna. So the horizontally radiated power will be a bit less than the vertically radiated power, but it is for sure a couple of kW's. The polarisation could also have been changed to circular.

Thanks very much Janpeter. I knew something must have changed as it used to be very very rare to hear this one and now it's there a lot of the time. Other frequencies will be more of a challenge, but I did just hear Fun Radio on 101.9 as well when 87.8 and 104.3 peaked up, although it had to get past a whining noise that is on that channel.
 Good DX.

** Personal Skegness 'First'

Unidentified:
87.5 1210 I Radio Ascona, Unlisted Clear vocal ID in pile-up

I had only two 'live' loggings from this opening, but all 15 minutes or so were recorded for later playback on the FDM-S2, where I discovered the rest of the stations. There were also the usual "multi-tx" catches, which I omitted.

I won't be recording and playing back many openings this way as this one took me almost four hours. It was only a meagre opening compared to a mid-season frenzy. It would be sensible to concentrate on recording only the more interesting openings, unless time permits.

Good DX!

Hi John,

Very interesting to see what a mediocre opening that lasts only 15 minutes can produce. And you were recording only 25% of the whole of Band II! Imagine what an 8 hour, MUF to the top of the band could produce. It may take you a weak to sort that out. Stil a nice thing to do on cold winter nights.
It is remarkable to see how this Es cloud was shifting from one minute to the next.

I would recommend to always press the record button. And if you then catch 2 x Es, listen to everything that has been recorded in the same time frame.

I am still working with the Sony XDR, waiting for an SDR that can record the entire FM Band and still has a high enough ADC.

It is good to see the Es getting started. And like every year, the UK will be getting more than anywhere else in Europe.

With regard to your UNID. I would suggest you heard Radio Ascoli. That matches well with your other catches.

73, Janpeter

I remember how surprised I was when using the Perseus for the first time on medium wave. Up until then, I had never experienced a true west coast US / Canada opening. This was the goal of many UK medium wave DXers. It had never happened to me. Then one night when conditions were right for this, it happened. But I didn't just get one or two west coast stations, I got several, and these became surprisingly regular when the conditions repeated.

Now, to expect the same on band 2 may be different. I still have no idea if I am best positioned for two E hops, but if I have the same chance as everybody else then I should hear several double hop stations with any luck.

I now also have the luxury of being able to record a third of the band when I go out. Naturally it would have to be 87.5 to 93.5, but I can create a record schedule so I can record the whole band in thirds, then have the S2 keep jumping back again, so 1-2-3, 1-2-3, 1-2-3, etc. for a couple of minutes on each section.

Good idea. This is the plan, hard drive space permitting, then I am prepared for the event of a double hop.

I thought this too, but the ID was definitely Radio Ascona, as opposed
to Ascoli. Perhaps it's a variation in the city name, like how we say
Manchester, Mancunian, Manc, Madchester, etc. Same city, different names.

Thank you again. Best DX.

35922. For info Studio 1 sdr software

Yahoo group: SkywavesDX (2015)
Date: 2015-04-27 14:07:42 UTC
From: koalabang
Topic: 35922 Message: 35922

*_See on elad forum:_**_
_*/
There is a “cracked” release of Studio 1 available by some underground P2P channels since some time.//
//
//Being curios, I tried that version using (of course) all the precautions of the case; WARNING: don’t try yourself at home (see below for a detailed explanation).//
//
//The hacker renamed it “Studio 1 open version”, probably because calling it “badly cracked and dangerous” wouldn’t have been as much as “nice”.//
//
//While it is relatively simple for a skilled hacker to skip the early stages of the protection scheme, once you get to the core there is no way: things start to be too much complicated as they involve many aspects of the DSP itself.//
//
//So, the program starts, windows are showed correctly giving a false impression of a working program but the fun starts when you try to tune on a signal: the DSP is totally screwed up (of course) so you get very funny noises, ogre like or cartoon like voices etc.//
//
//Now the SERIOUS part: the real purpose of the hack is to propagate MALWARE, taking advantage of the popularity of the program. Specifically, after a certain run time the program starts its dirty tricks so it is actually a time bomb.//
//
//The malware in question is that kind of ransomware that try to encode your files with a cryptographic algorithm so stay away from it!//
//

Subject: Re: [SkywavesDX] Paris Tour Eiffel tx

Hi Nick,

I have been experiencing the exact same thing. A DX friend living in Northern France has passed my question about the antenna polarisation of 104.3 MHz RTL on to the RTL technician responsible for the Tour Eiffel tx. The reply was that the polarisation of the 104.3 MHz tx is vertical and that nothing had changed. My friend added a note saying that any information on technical parameters is mostly treated as strictly confidential. So he was surprised to see an answer coming back and suggested that the answer may not be correct. My own note to this is that the answer cannot be correct. I have been listening carefully to 104.3 MHz the last time there was a lift. There is hardly any signal strength difference when listening in on my vertical and horizontal antenna. So the horizontally radiated power will be a bit less than the vertically radiated power, but it is for sure a couple of kW's. The polarisation could also have been changed to circular.

Does anyone know if there has been any changes at this tx e.g. from vertical to mixed polarisation? It has become a regular on scatter here in the last few days, with 87.8 and 104.3 sometimes peaking up well. I've just been listening to Voltage on 96.9, only very weak but easy to follow in parallel with the web stream. I have never noticed reception from this tx until very recently.

Good DX.

Nick, Whitchurch, Hampshire.

They are going to update and replace the cabling to the antennas: 32 cables of 20m length and 3 cm thickness. Should reduce the transmission line losses!

I am still captioning all my analogue TVDX photos. Does anybody know what AVVC HVS seen on a lot of Dutch testcards, stood for?

Does anybody have any info on the AFN TV that used to be on A80 from a USA base in the Netherlands?

Thanks

Tim

Hi Tim,

AVVC means Audio Video VerbindingsCentrum. Which has the meaning of audio and video connection center.
HVS stands for Hilversum, the location of this center.

What kind of information on AFN do you need?

Regards,
Janpeter van Dijk

In Denmark, the planned FM switch-off 2019 has now been postponed without setting any new date.

The location was Soesterberg, which is where the American Forces had their base camp. The exact ERP was not officially known, but was around 20 kW.

35939. UNID TV on Channel R2

Yahoo group: SkywavesDX (2015)
Date: 2015-05-01 09:40:49 UTC
From: davebunyan@...
Topic: 35939 Message: 35939

Thanks to Vassili's plug in I was getting video on R2 from 1147 to 1201UTC - not clear enough or a big enough picture to see anything clearly but there was a long black rectangle in the top right with writing on it. It seemed to be a chat show. It was strong enough to be picked up on the analog tuner of the PC monitor - language sounded Ukrainian rather than Romanian/Moldavian - if I can really tell the difference. Around 1205 when I playd back my 7 minutes of recording from the HDSDR I got the sound from Ch R4 on 99.75 - almost certainly Ukrainian - dubbed over American English. Probably explains why on the laptop dongle there was big 'noise peak' mid-band - it would have been the video.

The R2 is either UKR or MDA as the DXer in East Sussex reported both intermingling.

It probably 35 years since I last did any Band I DXing

Rgds

** Personal Skegness 'First'

I spotted this opening just as I was about to go out, so it was another day of playing back recordings later in the day. I was surprised by the number of low power Romanian station I received with full RDS. For instance, 89.5 Radio Brasov Special is listed with only 40 watts. The Galati transmitter is 50 watts and Adjud is 80 watts.

Good DX!

Hi John,

Definitively starting with Romanian language „publicitate“ and YL spot (a native speaker might catch the phone number at the end of the spot), BUT from 01:55 the OM is talking Russian, URL autosms.md (“auta sms dotschka em de” @ 02:10) - So the second part would be Radio STIL, a station from Moldowa broadcasting in Russian.

73,
Günter

Thank you very much G?nter and Ilkka.

So that's another Moldovan station in the log! What a day!

I ask myself, was yesterday a good day for Es? Or was my log the result of me being able to study each frequency closely on the S2? I think it is the latter, but it has been a decent early start to the season. The feed from the S2 to RDS Spy is helping enormously as even very weak and noisy signals are now producing RDS.

Thank you and good DX!

John

35945. Iceland: New radio station

Yahoo group: SkywavesDX (2015)
Date: 2015-05-01 22:04:46 UTC
From: Günter Lorenz
Topic: 35945 Message: 35945

http://www.radioicelandfm.is/

We are an all English speaking station in Iceland. you can listen to us online and before the summer is here, you will be able to listen to Radio Iceland while driving around the ring road with some minor shadow areas. Feel free to take part of the live interviews by sending us questions and comments on our Twitter or Facebook account.

You will only hear Icelandic music on our station with possible rare exceptions should the occasion arise.

FM 89,1 - Reykjavík [I think we can safely assume that the Radio France relay on 89.0 is history]
FM 87,7 - Akureyri
FM 89,9 - South Coast (Háfell and Jórvík)
FM 91,7 - South Coast (Hnjúkar)

73,
Günter

35946. AirSpy 10 MHz recording/playback?

Yahoo group: SkywavesDX (2015)
Date: 2015-05-02 14:33:54 UTC
From: harriku@...
Topic: 35946 Message: 35946

Hi from Finland!

I bought AirSpy just because it has 10 Mhz bandwidht recording with good enough RF-performance, if there are no high-power tx's close. It will be installed to distant remote-FM-DX-site among with FM+ and XDR (http://remote-fmdx-uto.blogspot.fi/) http://remote-fmdx-uto.blogspot.fi/.

I have it working, but I have a question for AirSpy-users who record 10MHz bandwidht:

1)
What software do you use for recording 10MHz with AirSpy?
SDR Console V2 seems to make max. under 1 minutes long files and 2Gb each.
Possible to have that longer?

2) SDR Sharp can make longer time recordings with plug-in, but there seems to be no good playback-tool in SDR Sharp. No chance to skip back or forward within time scale on one file.
Can those SDR Sharp-files be played with Console V2 (or Studio 1)?

3)
I have not managed to use AirSpy with HDSDR. When installing drivers to the HDSDR-folder the software gives error: "Can't start, MSVCR100.dll is missing from the computer" (it might be solved to Visual C++ 2010.exe).
Should I fight more with HDSDR to have easiest was to record/playback?

(Two years ago I managed to record RTL-SDR-stick (2-4 Mhz bandwidht? can't

rememeber) with SDR Sharp and play the files by inverting them in V2.)

So, how do you take AirSpy 10 MHz bandwidht and play it in the most reasonable way?

Harri, and others (silent as well;),

Heard today that listening / recording with 10MHz BW is possible via SDR Sharp# (or whatsoever the official name is for this sw), BUT not possible to listen those files..

So seems/and it is that lot of these SDR receivers and softwares are not so compatible/matching, mainly designed for listening not for recording and play-back purposes (like DVB-T/DVB-T2 tv boxes are).

interesting topic but radiosilence is seems to be normal as no-one knows / has tested.

Hannu

ps. HKU, heard via MSO ;)

There's a very interesting discussion about this on the Skywaves BB forum: http://skywavesdx.org/viewtopic.php?f=37&t=365 Go to page 7 for the latest on this, but there's been plenty of discussion about this. I am also debating whether to sell my FDM-S2 and venture into the 10 MHz IF spectrum.

There's a lot going for the Elad FDM-S2 and I can't recommend it enough recommend it, but there might be a brighter future with Airspy and the various software packages which can be used with it.

John

Having imitations on playback of files is highly frustrating
I believe the Airspy was designed to run with SDR #, and
as John has mentioned, l would post your question on the
provided link.

John and Myself and others have been chatting direct to
the designer of Airspy and SDR # 'Youssef' about possible
additional software add ons for the Airspy. So this could be
a great chance to improve the software for band 2 users.

I am currently a Elad S2 user, and tbh the only attraction is the
possibility of 10mhz recording and playback, so I really
hope some improvements are made, as the 10mhz capture
is a bit pointless unless you can access it properly, imagine
your 40 minutes into playback, you struggle on a ID, and
have to start playback again from the beginning... nightmare
if this is the case?

Damien

35953. MS triggered Es

Yahoo group: SkywavesDX (2015)
Date: 2015-05-09 13:43:11 UTC
From: ilkka suni
Topic: 35953 Message: 35953

Hi folks,

NOW, AS I HAVE gathered in the year and say adding three quarters to
that, I have been subsrcibing to this group, I have noticed some
irratic postings concerning
Meteor Scatter, combined with other forms of propagation.

Herewith, I am posting a link to a fresh case:
https://app.box.com/s/wrs2t78mvpgl6i4wers4luplgf3a6idz

In the clip, you can hear 88.8 RTE1 Maghera via Es, triggered by MS.
The 158 kW Maghera TX is located 2.380 from my QTH.
You can hear the MS "snap", sounding like a german male voice uttering "info",
and the MS immediately followed by RTE [the male voice].

The meteor is coming from an unfavourable azimuth to my location,
thus the scatter being a mere popper.
.

WHAT I FIND interesting is, my 8-element yagi was pointing to 215 degrees,
whenas the RTE Maghera tx stands in my 265 degrees.

The 8-ele yagi pointing pointing to 215, normally covers roughly 190
to 240 degrees,
not picking up as far to west as 265 deg.
.

LATER ON, in the clip, there is 88.8 [D] RBB Berlin carried by a decend MS.
By which one might conclude, curently there are various meteor
concentrations running in various phases.

73, ilkka
[FIN-Joutseno]

Who told you this? Airspy IQ WAV files recorded in SDR# can be played in HDSDR/RDS Spy or SDR Console V2, as long as you invert (swap I and Q).
BTW Airspy works in SDR Console V2, HDSDR and Studio 1, as well as working in SDR# anyway.

I don't have an Airspy, but I do have some IQ WAV files recorded using Airspy, and I can play them in other SDR apps.

Hi Peter,
Nobody has stated this! The comments were in response
to a question asked by a Airspy user, who was struggling
to playback his 10mhz recordings.
We have been hoping for a reply by a user, as if you read the
Original post, it paints a poor picture for playback of 10mhz capture
Files.
Being that I use Elad software, we where looking for a comment from
a user like yourself.

Hello

Thanks to NJ Nick on t'other Skywaves forum for the head's up..

Prolific SDR# plugin developer Vasili has written a great plugin for SDR# which gives a 192kHz MPX output so RDS Spy can now be used with SDR#

I've made a quick video showing SDR#/RDS Spy using Vasili's MPX plugin. (10MHz Airspy SDR# IQ WAV file)
RDS Spy is the winner

A few interesting logs here during the tropo on the 10th:

87.7 Euskadi Irratia Azkoitia 901 km
87.9 France Inter Toulouse/Pic du Midi 929 km
87.9 France Culture Parthenay/les Chateliers 502 km
88.9 Euskadi Irratia Bilbao 899 km
90.4 France Inter Clermont-Ferrand/Puy-de-Dôme 684 km
91.1 France Musique Niort/Maisonnay 568 km
91.2 Gaztea preumed with pops Monte Oiz 895 km
93.8 France Inter Parthenay/les Chateliers 502 km
95.7 France Culture Toulouse/Pic du Midi 929 km
96.4 France Culture Niort/Maisonnay 568 km
96.9 RNE Radio Nacional Cantabria (Santander) Liérganes/Peña Cabarga 892 km
98.4 France Culture Clermont-Ferrand/Puy-de-Dôme 684 km
98.5 France Musique Parthenay/les Chateliers 502 km
99.4 France Inter Niort/Maisonnay 568 km RDS levels
100.5 France Bleu Gascogne Bayonne/la Rhune 881 km
105.0 RNE Radio 5 Todo Noticias Santander Liérganes/Peña Cabarga 892 km

The Spanish signals were weak at best. Good DX.

From: Janpeter van Dijk
Topic: 35847 Message: 35989

Okay, thank you Günter. I do not care so much about my loggings showing up on dxmaps. I would like to keep my 'administration' within myFM in good order though.
On a separate note. When working in myFM, after entering a frequency, the response of the system is a list with transmitters on that frequency. As a default setting, the sorting of that list is with the strongest transmitter on top. I was wondering if the field strength of the transmitters as listed, is taking into account the antenna pattern. Which for many transmitters is a directive pattern. Taking it even further, is the geography between the receiver and the transmitter location being taken into account, like mountains? 73,
Janpeter

35998. AW: [SkywavesDX] FMLIST in Error

Yahoo group: SkywavesDX (2015)
Date: 2015-05-12 16:43:47 UTC
From: Günter Lorenz
Topic: 35847 Message: 35998

I have checked the server logs and together with Janpeter we found that no log is missing. Some logs had got a different date.
There may be a nasty bug behind this, which I will try to reproduce. Please let me know if you observe any similar problems.

The field strength in myFM is calculated in the same way as the predictions on FMSCAN, actually I am using Peer-Axels set of algorithms.
I _think_ I have implemented the antenna pattern, but will doublecheck.
The geography is taken into account, but only in a rough way. Peer-Axel is using data with a 500 m resolution. The algorithm is tuned for speed – if you ever calculated RadioMobile maps, you know how long calculations with higher resolution take.

73,
Günter

Betreff: Re: AW: [SkywavesDX] FMLIST in Error

Okay, thank you Günter. I do not care so much about my loggings showing up on dxmaps. I would like to keep my 'administration' within myFM in good order though.
On a separate note. When working in myFM, after entering a frequency, the response of the system is a list with transmitters on that frequency. As a default setting, the sorting of that list is with the strongest transmitter on top. I was wondering if the field strength of the transmitters as listed, is taking into account the antenna pattern. Which for many transmitters is a directive pattern. Taking it even further, is the geography between the receiver and the transmitter location being taken into account, like mountains?

Thank you Harri, Paul and Reijo.

The ID is hazy but it does sound like "Radio Prizren". The Shimano advert is clear enough. I think you are correct. I logged this one in 2013 and I see that Prizren is exactly inline with the DX path too, so it makes sense.

Thank you for your help.

John

36003. Band II Tropospheric Loggings for 11 May 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-05-12 19:29:30 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36003

Hi All,

With some delay herewith my loggings for yesterday evening. Thanks to Günter, who was able to retrieve some of my loggings that had moved to the year 2014 by themselves!
No dazzling distances, but unusual short tropospheric Band II skip instead. I was pleased with several first time catches.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Hi John,

To be 100% correct, the tx name is Radio Prizreni. From Prizren, Kosovo. Congratulations, a very nive one.

73, Janpeter

36013. AW: AW: [SkywavesDX] FMLIST in Error

Yahoo group: SkywavesDX (2015)
Date: 2015-05-14 18:25:27 UTC
From: Günter Lorenz
Topic: 35847 Message: 36013

The „orange“ (not the yellow) is derived via the date of the last entered log, and stored in a browser session. If you log out of FMLIST and come back later, nothing will be orange, until you enter your first log or bandscan entry.
Reason for not using the current date is to make this work also if you enter your logs at a later time.

73,
Günter

I have checked the server logs and together with Janpeter we found that no log is missing. Some logs had got a different date.
There may be a nasty bug behind this, which I will try to reproduce. Please let me know if you observe any similar problems.

The field strength in myFM is calculated in the same way as the predictions on FMSCAN, actually I am using Peer-Axels set of algorithms.
I _think_ I have implemented the antenna pattern, but will doublecheck.
The geography is taken into account, but only in a rough way. Peer-Axel is using data with a 500 m resolution. The algorithm is tuned for speed – if you ever calculated RadioMobile maps, you know how long calculations with higher resolution take.

Betreff: Re: AW: [SkywavesDX] FMLIST in Error

Okay, thank you Günter. I do not care so much about my loggings showing up on dxmaps. I would like to keep my 'administration' within myFM in good order though.

On a separate note. When working in myFM, after entering a frequency, the response of the system is a list with transmitters on that frequency. As a default setting, the sorting of that list is with the strongest transmitter on top. I was wondering if the field strength of the transmitters as listed, is taking into account the antenna pattern. Which for many transmitters is a directive pattern. Taking it even further, is the geography between the receiver and the transmitter location being taken into account, like mountains?

Hi Janpeter,

I will check the server log later. I did not do anything last evening, so I wonder how things got fixed.

DXMaps has a minimum distance of 200 km for tropo logs.

73,

Günter

36014. Re: AW: AW: [SkywavesDX] FMLIST in Error

Yahoo group: SkywavesDX (2015)
Date: 2015-05-14 18:30:20 UTC
From: John Faulkner, Skegness
Topic: 35847 Message: 36014

Ah. I understand - thank you for the explanation.

The orange background used to stay orange, but I just cleared my cache,
so that will explain it.

Thanks.

John

I have uploaded 2 videos of Belarus TV 1 one is a bit noisy with sound the other is noise free but no sound.

https://youtu.be/65aaKP4Nj8o

https://youtu.be/gDngR6G_C_4

Also Россия 1 from this morning.

https://www.youtube.com/watch?v=Syma1LhkLoM

Hi Tim,

This is a real tx, location Trokeniki, Hrodna oblast, 0.5 kW TRP, v-pol.

Nice catch!

Janpeter

Onderwerp: [SkywavesDX] 70.76 BR2 Kanal Kultura (Belarus)

see subject line,
is it an IP radiated at one of the sites or a new tx?
if IP, i haven't been able to work out the maths

its in now

Hi All,

A persistent and more or less stationary Es cloud brought a lot of radio activity today.
The MUF struggled to reach Band II though.
The day was topped off with a 6 meter F2 / eTEP opening into South America, assisted by Es.
Not a bad day at all this early in the season.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

36020. Today's Es (14.5.15)

Yahoo group: SkywavesDX (2015)
Date: 2015-05-14 20:54:01 UTC
From: nick gilly
Topic: 36020 Message: 36020

I missed virtually all of the Es today, as most of the activity happened whilst I was at work. I managed to hear a few minutes of Sweden on 87.6 driving home home from work but this faded before I reached the A34.

At home I heard about 3 signals briefly whilst beaming ESE as there were very high MUFs of >144 MHz over the Balkans and DXers in central Europe were getting FM from LBN, SYR, TUR around the same time (about 1729 UTC):

87.6 had pops
87.7 had Richard Marx 'Right Here Waiting'
87.8 had a couple of brief fade-ups of what I think is a Turkish song after listening to the recording. Very intriguing. I had a look on MyFM and found a 'Radyo Seymen' listed from Celikhan/Tarim Müd. yani in southern Turkey north of the Syrian border. The format is right after listening to their web stream, and it matches the area being heard in central Europe. Of course this is all guesswork but I do think that this signal was probably a double-hop. One that got away unfortunately.

So that was all I managed to hear. I hope tomorrow brings more. Good DX.

Nick, Whitchurch, Hampshire.

Serbia
Slovakia

This was a great opening as it is still early in the season. There were
plenty of low power catches too and even some short hop to Germany! The
Baltic opening was the best for Latvia, Lithuania and Estonia I have
experienced. I have uploaded two files of this reception, available for
download here:

http://www.mediafire.com/download/53xu2a4aznaqine/2015-05-14_16-23-00_Baltics_(1).ape
http://www.mediafire.com/download/8kz936o3vl1a985/2015-05-14_16-24-00_Baltics_(2).ape

You will need Monkey's Audio to de-compress the files.
http://www.monkeysaudio.com/

The signals are mostly weak so this should be a good test for RDS
software. Interesting how stations from these countries were prodicing
RDS with very weak and noisy signals.

Again, it's thanks to the FDM-S2 that I was able to record the openings
and play them back later.

Good DX!

36027. Q'uranic programmes on 105.5 but who?

Yahoo group: SkywavesDX (2015)
Date: 2015-05-15 14:59:30 UTC
From: nick gilly
Topic: 36027 Message: 36027

This has been in for over an hour with Q'uranic px, peaking about 150 deg. I have a couple of recordings including some OM talk which I'm hoping will give some clues as to it's origin. The only 2 stations I found in MyFM from North Africa on 105.5 Chaine 3 in Algeria (not this as I checked the web stream) and ex LJBC Al Q'uran al Kareem from Libya. Perhaps it is the latter?
Did anyone else hear this station? Good DX.

Nick, Whitchurch, Hampshire.

Unluckily for me , we only have a few empty frequencies here , and local stations all over the band ! But I managed to receive BBC at 88.5 from Rowridge , France Culture at 88.8 and Radio Berlin at 88.8 again! Also 2 unid Italian stations at 88.7
Right now I am uploading the videos and I will post them later.

Hi Thanos,

That means I might have had Laikos on 87.6, (Rowridge is my local) but I was at work!

I was able to do a little dx-ing remotely from work, but the proxy used there is show to deliver web pages, so it made matching streams hard going. Did record a few SDR streams, going through them now to see what I can squeeze out of them.

36032. Some unids from today's E-skip - is this Libya on 105.5?

Yahoo group: SkywavesDX (2015)
Date: 2015-05-15 21:04:05 UTC
From: nick gilly
Topic: 36032 Message: 36032

Hi all. A station was heard on 105.5 here during this afternoon's E-skip conditions for well over an hour. The band was open to north Africa, Italy and the Balkans: much of the north Africans were from Tunisia although Algeria was present too. The station on 105.5 peaked at about 150 deg, had Q'uranic programming, was not in parallel with anything I could find and had no RDS. I wonder if it could have been Libya? Some clips below

https://app.box.com/s/jxqj39yc1075p6qkw82lu90c7bc5wx6h 105.5 unid part 1 (some talk near the end that might be news)

https://app.box.com/s/lffil4kp0x929kdwutwlx0944o31kyft 105.5 unid part 2 (sermon, was peaking at 3 bars here)

https://app.box.com/s/ajrw99k3qca0j8y6bk35h131sd85nnuo 105.5 unid part 3

https://app.box.com/s/6tw6e1dea4a49stieukf48d63bcn8hhr 105.0 unid - Tunisia?

https://app.box.com/s/ifou7e5u2iswf0fd1ei6e1w8zc6hkeeg 90.0 unid, probably Tunisia?

Any help with these would be much appreciated.
 Thanks and good DX.

Nick, Whitchurch, Hampshire.

36033. Sporadic E Loggings for 15 May 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-05-15 21:26:32 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36033

Hi All,

WOW, WHAT A DAY!! Many, many hours with Es propagation. And in the afternoon and evening some nice tropo as well.

For long periods during the Es, logging stations was difficult. Generally there was a lot of distortion on most signals, requiring a high strength to give RDS.
And with up to 10 countries coming in at the same time, at least two or three stations were fighting for each frequency.
Most memorable was about one hour with an opening into Libya. Either a lot of new transmitters have been installed in the country, or this was the first
good opening that I have experienced ever. But where to find information on active stations in Libya?

This is a very impressive start to the season!

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Hi Nick,Great receptions !Your 105.0 is the same as the 105.5 because it's the same man with a little echo in his voice !On the 90.0 I hear some French accent so this could have been from TUN?Ruud

Subject: [SkywavesDX] Some unids from today's E-skip - is this Libya on 105.5?

  Hi all. A station was heard on 105.5 here during this afternoon's E-skip conditions for well over an hour. The band was open to north Africa, Italy and the Balkans: much of the north Africans were from Tunisia although Algeria was present too. The station on 105.5 peaked at about 150 deg, had Q'uranic programming, was not in parallel with anything I could find and had no RDS. I wonder if it could have been Libya? Some clips below

https://app.box.com/s/jxqj39yc1075p6qkw82lu90c7bc5wx6h 105.5 unid part 1 (some talk near the end that might be news)

https://app.box.com/s/lffil4kp0x929kdwutwlx0944o31kyft 105.5 unid part 2 (sermon, was peaking at 3 bars here)

https://app.box.com/s/ajrw99k3qca0j8y6bk35h131sd85nnuo 105.5 unid part 3

https://app.box.com/s/6tw6e1dea4a49stieukf48d63bcn8hhr 105.0 unid - Tunisia?

https://app.box.com/s/ifou7e5u2iswf0fd1ei6e1w8zc6hkeeg 90.0 unid, probably Tunisia?

Any help with these would be much appreciated.
 Thanks and good DX.

Nick, Whitchurch, Hampshire.

You're right Ruud! I hadn't realised it was in parallel with 105.5. This is also listed from LBY (Misratah) again as "ex LJBC Al-Quran al-Kareem" like 105.5 so these are presumably both from Libya.
 Good DX.

Nick, Whitchurch, Hampshire.

Another excellent day of Es! Most Belmont frequencies managed to
disappear under the army of Italian stations around the middle of the
morning. 88.8, 93.1 and 100.5 lost their footing and were completely
buried. 102.2 Lincs FM became Radio Maria (I don't know which

transmitter site) and BBC Radio Lincolnshire 94.9 suddenly had an Italian presenter! It's days like this when you start to believe that anything is possible.

I've had to record and catch-up, as usual really, but I didn't get chance to go through all the files. Still, I am very pleased with today's haul. Excellent going again for such an early part of the season.

Good DX!

Hi

First day of the season here in Beauvais, a long and weak session with Italy and Tunisia dominant.

Italian stations mainly from Sicily with local RAI news often.

Only one new frequency at the end of the day : Shems FM on 96.2 (Sfax) at RDS level.

All thru the day a German station kept popping up and out on 88.8(most likely WDR5 Langenberg)

so Tropo ducting was active too.

Pat

Today Belarus has switch off the last UHF (21-59) analog TV txs.
6-12 will be closed 16 June.
1-5 probably will survive until 1 Jan 2016.

The 1-5 channels are politically sensitive issue so any options are possible.

Victor

i agree with Hutch

sorry :(
have you got any scanner you can use to see which channels are active,
a uniden type set will do the 9000 was a nice desktop set thats prob
available second hand cheaply

thats quite a leap from the day before when it was .780

873 is much more normal for Jordan,

any CCI on it? if not i reckon syria has gone

there was no CCI on the 14th or 15th either

Thanks Paul there's a comment saying it was Russia as well so may well be an image but when I did check R1 and nothing was there at that time but unless R1 came up while I was viewing E 3 so I will have to watch that.The TV is a Samsung TV/PC monitor and is of course wideband although presets tuned to the R and E ch's.

Hi Ruud. I have heard from another DXer that 105.5 is in fact an unlisted station from Tunisia, possibly from the Ksour Essaf tx south of Monastir. Unfortunately there don't seem to be any IDs on the clips.
 Good DX.

  You're right Ruud! I hadn't realised it was in parallel with 105.5. This is also listed from LBY (Misratah) again as "ex LJBC Al-Quran al-Kareem" like 105.5 so these are presumably both from Libya.
 Good DX.

Subject: [SkywavesDX] Some unids from today's E-skip - is this Libya on 105.5?

  Hi all. A station was heard on 105.5 here during this afternoon's E-skip conditions for well over an hour. The band was open to north Africa, Italy and the Balkans: much of the

north Africans were from Tunisia although Algeria was present too. The station on 105.5 peaked at about 150 deg, had Q'uranic programming, was not in parallel with anything I could find and had no RDS. I wonder if it could have been Libya? Some clips below

https://app.box.com/s/jxqj39yc1075p6qkw82lu90c7bc5wx6h 105.5 unid part 1 (some talk near the end that might be news)

https://app.box.com/s/lffil4kp0x929kdwutwlx0944o31kyft 105.5 unid part 2 (sermon, was peaking at 3 bars here)

https://app.box.com/s/ajrw99k3qca0j8y6bk35h131sd85nnuo 105.5 unid part 3

https://app.box.com/s/6tw6e1dea4a49stieukf48d63bcn8hhr 105.0 unid - Tunisia?

https://app.box.com/s/ifou7e5u2iswf0fd1ei6e1w8zc6hkeeg 90.0 unid, probably Tunisia?

Any help with these would be much appreciated.
 Thanks and good DX.

Nick, Whitchurch, Hampshire.

Yes R 2 is closer to E3 but nothing there when I checked before seeing it on E 3 oh well. One other question on my video of Россия 1 14/05/15 there's a comment that Sankt-Peterburg closed on 15/05/15 so does anyone know if it has or not.

Hello Andy.

Do you still have an RTL dongle? These are great for Band I, even if useless for FM in your location. You can see the video carriers on the display. No need to buy a scanner.

I have many videos on my YT channel showing Band I TV carriers in SDR# (and HDSDR).

Hi Andy,
This looks very like the unid. station I received at 9:30am BST on Friday (15th May) in S.E. Essex, judging by the logo TR. It was definitely E3 and not R1/R2
and was viewed using an HS D100. I also measured the video carrier on a scanner as no-offset to at least 3 DPs.

Cheers
Tom

Hi All
In an attempt to assist with cross referencing RDS Spy logs with SDR#
I have added a ‘Log Every Frequency Change’ feature to my plugin which will create a RDSDataLoggerFrequencyLog-yyyy-mm-dd.csv file entry for every frequency change my plugin does.

Hello Andy.
Do you still have an RTL dongle? These are great for Band I, even if useless for FM in your location. You can see the video carriers on the display. No need to buy a scanner.
I have many videos on my YT channel showing Band I TV carriers in SDR# (and HDSDR).

Andy,

Maybe you might need a low pass filter in your location, or an FM bandstop filter (FM trap).

Another 192kHz audio file for RDS Spy tests. Dynamic PS during Es from Italy in 2011.
WAV format audio file.

(From Peer-Axel's FM+ demo file)

From: pe1etr@...
Topic: 36068 Message: 36069

Possible use:

Unfiltered audio (MPX) from a tuner eg SB920 can be recorded in Adobe Audition (or Audacity) using a sample rate of 192kHz, rather than the default 44.1kHz, and played back through RDS Spy later.

For example you could record from your tuner eg SB920 for 3 hours whilst you are out, come home edit the audio file,and play it through RDS Spy.

Set the audio out of VLC (or similar player) to the same as the MPX input for RDS Spy. eg VAC1. Use audio repeater to hear the audio

You sound card must be capable of sampling at 192kHz.

Hello Paul,

Yes, a text file comes with the DLL, which is called "Magicline". Copy and Paste the contents of that file into the Plugins (XML file), anywhere before the last lin. Open the xml file in Notepad rather than double clicking it.

Hello Paul,

Are you referring to the output level of MPX for RDS Spy or for recording 192kHz audio? For the former it doesn't seem to matter much, although about halfway is fine. For the latter adjust the level until you get almost full scale in the recording app.

Peter

36082. Gibraltar, Andorra, Monaco, Liechtenstein?

Yahoo group: SkywavesDX (2015)

From: harriku@...
Topic: 36082 Message: 36082

Any of these small countries have never been received in Finland on FM.

How about in UK or other parts of Europe with ideal distance for Es-skipping?

MONACO
It seems very clearly that the tx's in Monaco (and Nice) are in the dark side of the mountains. Nothing
heard from there altough many openings around it (France/Italy) during the decades.
Any windows to UK or more east from Monaco?

GIBRALTAR
This is in ideal distance to UK and N.Germany etc. Never identified there?? I have visited GIB once and
I think the transmitters there can not be in the dark side??

ANDORRA
Last summer I identified French R Transparence 93.7 only 15-20 km from Andorra - but nothing from AND.
Are the transmitters beaming south from some northern mountain slope or are they in the deep valley?
If Andorra is never noticed anywhere I think it will never be possible in Finland either.

LIECHTENSTEIN
This might be too close for UK and other Euro-DX. I have identified Radio Ri from Switzerland only 5 km
from Liechtenstein boarder. The only certain frq to id LIE is Radio L on 96.9 MHz (and possibly some more
20-25 watters of Radio L in LIE area).
Are Vaduz trasnmitters in a low place in the valley or again in the mountain dark side??

Enclave Baarle Hertog HOL 87.8 MHz would be nice to hear as well (or tx in Baarle Nassau?) - like
enclave Campione d'Italia (I have Radio International from there, but tx 102.4 was in Italian mountains).

Ceuta is identified in Finland and QSLed.
San Marino is very common here.
Vatican also quite easy.
Malta heard once long time ago.
Cyprus every now and then.

Any experiencies on these listed here??

Hi Harri.
Of the main countries on your list, I have received Monaco before (Riviera Radio on 106.5 on more than one occasion).
Of the last 5, San Marino I'm not sure of, but I have heard Vatican, Malta and Cyprus on Band 2.

Hope this helps. Good DX.

Harri, don't forget that "Carlo" "and" "Giovanni" Bellabarba from Bologna Italy and during their "numerous" travels around the globe as they do have a fantastiq qth / and with the numerous travels they have had have heard all radiostations from the world. What a fantastiq qth they have/or had in Via della Dozza, 14 during the last 30 years. I suppose those countries / enclaves are just pests when "they" "open" the radio. Unfortunately they seem to be a bit inactive during the last few years, maybe all qsl's and stickers already collected ? Btw, anyone knows how "they" are doing ?

Thanks for comments!

Yes, Riviera 106.5 is in French side. I have heard is long time ago and I think it was on dep 83 at that time beaming the coast N.E.. Now it is in dep 6. Departement 6 from France is difficult here.

I looked closer Monaco in FMLIST and Paul's catch of Jardin Botanique/Monaco-site seems to be extremely difficult as those low powers must be in the mountain slope. Perhaps a small window to NW??

I am pleased that Paul has heard GIB and AND. That gives a tiny chance for us, too, alhough the beam is
a bit different between us.

It seems that "Baarle Hertog'-tx" 87.8 MHz is in Baarle Nassau in Holland (acc to FMLIST), so that is not a new country for us. (Someone confirmed that by standing beside the tx-mast???)

If somebody has knowledge about the tx-site in Vaduz, please let us know. If I understood right, when I drove by car beside Vaduz, it was in the valley. If the transmitter is there it might not be skipping out.

The islands from our point of view:
Corsica is rare here, 88.7 Jazz Corsica heard several times - and only 2-3 others only during the years.
Sardinia is also quite rare and with short weak openings when up.
Sicilia is a bit more common with 2-hops - the distance exceeds the critical one skip level (2400 km) here.
Aland island is easy, only 90 km distance :)

Jan Mayen and Svalbard are difficult to id for 100% because no local programmes there.

36088. Thessaloniki's stations

Yahoo group: SkywavesDX (2015)
Date: 2015-05-23 07:28:24 UTC
From: thanos.thessaloniki@...
Topic: 36088 Message: 36088

Hello to all. Because Sporadic E days are coming soon, I filmed the local stations of my town, Thessaloniki. You can see the stations which have rds, and their ps-pty. All the stations in these videos are from Thessaloniki and are broadcasting from Xortiatis, except from the first station at 100.6 and 101 which are from Thessaloniki but they're broadcasting from Filippeio. On 100.6 although it sounds very weird, we have two stations. The first one is covering the west part of Thessaloniki and the second one covers the east side. Here's a list and then the videos :
87.6 Laikos
88 Nerit 1
88.5 88 miso
89 Rainbow
89.4 Arena
89.7 Imagine
90 Nerit 2
90.4 Aristera sta fm
90.8 Zoo
91.1 Vfm
91.4 Ola
91.7 Rso
92 Nerit 3
92.4 Ekfrasi
92.8 Radio Naousa
93.1 Music radio
93.4 Sto kokkino
93.7 Gnomi
93.9 Kosmos
94.2 Radio Lydia
94.5 Radio Thessaloniki
94.8 Eroticos
95.1 Cosmoradio
95.5 Metropolis
95.8 Nerit Makedonias
96.1 Next fm
96.5 Alpha
96.8 Velvet
97.5 Easy
98 Radio North
98.4 Panorama
99 Radio Ena
99.4 Flash
99.8 Ekrixi
100 Fm 100
100.3 Republic
100.6 Fm
100.6 (the first one) and Radio Mygdonia (the second one,it has got rds with ps:

MYGDONIA_100.6 FM and pty : varied
101 Fm 101
101.3 Radio Pops
101.7 Radio Kalamaria
102 Nerit Makedonias
102.3 Radio Akrites
102.6 Plus radio
103 More
103.6 Focus
104 Rythmos
104.4 Radiokymata
104.7 Rock radio
104.9 D.E.TH. radio
105.2 Live fm
105.5 1055 Rock
105.8 Hroma
106.1 City International
106.5 1055 Rock Xtreme
106.8 Iera Mitropoli Lagkada
107.1 Real fm (it has rds, ps : REAL FM_107.1, pty :none)
107.4 Libero
107.7 Sunshine

And now the videos :

Part 1 : https://m.youtube.com/watch?v=azfjlL7NYpQ Part 2 : https://m.youtube.com/watch?v=3YHOwknKzzY Part 3 : https://m.youtube.com/watch?v=S4gwJQAgYyY

Hi Harri,

I was very pleased to catch the 87.8 Baarle Nassau tx a couple of weeks ago for the first time in 40+ years of DX-ing.

Information on Dutch FM transmitters can be found here:
http://radio-tv-nederland.nl/876-1048mhz.html
This excellent web site is maintained by two well known Dutch DX-ers. You will find the exact tx locations and photo's by clicking on any of the links.

Regards,
Janpeter

Hi all,

I take advantage of this occasion, to ask to the FMlist staff a revision of the list of facilities filed under "Monaco".
And I ask them to move under "France" the transmitters which are -in reality- situated in France.

I sometimes receive signals from Monaco when I am in the Tyrrenian coast of Tuscany, but it seem that the only "real Monegasque" transmitter I've received is 102.4 (Rire et Chansons).

On the other hand there's four transmitters situated in Italy, on the top of Monte Capanne in Elba Island, (88.2, 92.3, 96.8, 99.8) who are been filed under "France" because they broadcast french public channels (Culture, Inter, Musique, Bleu).
But I think it's a mistake.

36095. UNID English news from the south on 87.8

Yahoo group: SkywavesDX (2015)
Date: 2015-05-23 12:38:45 UTC
From: nick gilly
Topic: 36095 Message: 36095

Did anyone hear this during the opening to Spain & Morocco earlier on? YL reading the news in slightly accented English on 87.8 with a lot of articles about the Arab world so presumably MRC or ALG? The signal was weak but with slow fades and quite a difficult copy due to adjacent channel splatter. It didn't sound like the lively style of a tourist/ex-pat station, but more like the international programmes that are aired on short-wave.

I'll have to wait for the CD to be filled up before I can upload a clip though.

Any ideas much appreciated. Good DX.

Nick, Whitchurch, Hampshire.

Sorry, I didn't realise you had already received Andorra, Paul. So good to see that something gets out of this place.

Can somebody confirm that Baarle-Nassau is a separate country? I am confused. I occasionally Lokale Omroep Baarle from Baarle-Nassau/Parallelweg (nbr) via tropo.

Thanks

John

Hey Franco !

Nice to hear that you have visited Thessaloniki.

Last year I had a Sporadic E from Italy and I identified Radio Maria at 88.6 with rds !

If you ever receive a Greek stations this summer and it's unid, please contact me.

Now I am looking at your scan !

Thanos

Hi Thanos,

I've been three or four times in your lovely city (unfortunately, it was some years ago and, more, it was BEFORE the financial crisis in our countries.....) and also you can find in Fmlist the Bandscan I've done in the western part of Thessaloniki back in 2008 (FMLIST).

So, I will take a look to your videos, with real pleasure but also with a little bit of emotion.....

John,

Not a separate country by DXCC standards.

Mind you - neither is Sicily, though Sardinia is.

Jim.

==========

Jim, Bournemouth, Dorset. IO90BR.

Elad FDM-S2, Perseus/FM+ and Funcube Dongle SDR Recievers

8-element OP-DES for Band 2, 12-ele ZL Special for 2m, plus wideband vertical.

Thanks Jim.

So is Corsica. It's awkward having two systems, each with different country totals.

Surprised to have some replies to my last post - still waiting for it to appear on here, lol. Good old Yahoo!

It is currently being added. What would FMLIST do without knowledgeable people like Ruud!
If I understand this article of 18/03/2015 correctly, the station has both a Belgian and a Dutch license:
http://www.gva.be/cnt/blrva_01586385/radio-bahena-start-weer-met-uitzendingen

I am FMLIST editor for France and Monaco (and a few more). Transmitters in FMLIST are assigned to a couutry based on the main target area, on the official license and on the country according to ITU assignments. The actual location of the transmitter is not relevant.

Many of the FM stations listed in FMLIST under Monaco are obviously targeted at listeners in France (besides a few in Monaco), and the transmitters are located on French territory (Mont Agel or Col de la Madone). However, none of these stations has got a license by the French autority (CSA). The licenses and the ITU allocations are from Monaco. Thus these stations are listed under Monaco (which is also the "official" target area, although the stations obviously are mainly interested in the spill-over to France).

> On the other hand there's four transmitters situated in Italy, on the top of Monte Capanne in
> Elba Island, (88.2, 92.3, 96.8, 99.8) who are been filed under "France" because they

> But I think it's a mistake.

It is not a mistake. These four transmitters operate with licenses by the French CSA to serve a costal area of Corse, using a highly directional antenna pointing west (250°). Again, the actual location of the transmitter is not relevant for the decision under which country a transmitter is listed in FMLIST.

The question under which country such "extraterritorial" transmitters are listed in FMLIST has been discussed thoroughly by the editors years ago. Obviously there are pros and cons for various options. Finally we decided in favour of the criteria mentioned above and apply them also in other parts of the world. I would like to keep it as consistent as possible and thus stick to the current scheme. So, I hope you can live with that :-)

From: Janpeter van Dijk
Topic: 36082 Message: 36109

Hi Uli,

I take the liberty to step into this discussion, I hope you don't mind :-)

FMLIST has been set-up and is maintained by the DX-ers community. So the set-up of FMLIST should primarily serve us, DX-ers. For us DX-ers, knowledge of the exact tx information is essential to DX-ing. Especially with the most popular propagation mode, Es, the skip area often has a narrow angle as seen from the receiving antenna.

For this reason I utterly disagree with the decision taken some time ago by the group of editors. In addition to this, particularly for FMLIST France, the names of the tx locations are very strange. Most of them start with the name of the coverage area, in most cases a big city nearby. Where the antenna location could be 30 kilometers away from that city.

Don't be mistaken, I have a lot of respect for all the hard work you put into keeping FMLIST F up to date. But I would prefer to see correct tx names. And in general, a tx location in country XX, should be listed under country XX. Anything else does not make sense. Monte Capanne is a good (or bad) example: this location is not even close to France.

73, Janpeter

Thanks all for the comments on this item! We here in Finland have challencies to hear these 4 tiny countries
+ Baarle Hertog and Campione d'Italia (which are counted here as DX-countries) and why not add Jan Mayen
and Svalbard to this challence-list.

The big news is that Radio BaHeNa 106.7 is in Baarle Hertog and on air again - as 87.8 seems to be a few
hundred meters from the boarder in Baarle Nassau (HOL) side. Tnx Ruud!

I am pleased to know that Gibraltar is possible (and even received today by Nick!) and Andorra also.
Thanks Paul for giving the observed AND-frequencies 94.2 (R-N.A.) and 90.1 (Tele R Taxi).

Nobody seems to have DX to LIE, but that is not ideal Es-distance for you there, and like mentioned, the tx's
seems to be in the valley behind the mountains. These days with wideband SDR-recording it is much easier
to catch these as we do not have to be on the right frq at the right time.
And about Monaco. Those low powers situated in Monaco seems to be in the dark side of the mountains for us in Finland.

(Naturally the exact location of the transmitters on FMLIST is important, but I understand that this info might be often hard to get.
The transmitters can be listed to the countries by the stations head-office, like it is now.)

good DX for the season.

I agree completely with Janpeter and, no mistake - I also greatly
appreciate your hard work.

If the transmitter is in France, it is in France. Not Monaco. Simple!

Best wishes.

John

From: pe1etr@...
Topic: 36113 Message: 36113

Audio recorded from the "line out" of a Sony ICF-SW7600GR portable radio,
in Audacity using a sample rate of 192kHz. Play it back with VLC, choose

RDS Spy input (eg VAC1) as Audio Device. (Use Audiorepeater to hear audio)

Audio file here:

https://app.box.com/s/gb3f0j6chjgj0y44pgi7rvoqupk32l0j

Agree!!

If you take the DXCC criteria, then for an entity/country to count, the station has to be transmitting from that country/entity.

Hi Uli,

I take the liberty to step into this discussion, I hope you don't mind :-)

FMLIST has been set-up and is maintained by the DX-ers community. So the set-up of FMLIST should primarily serve us, DX-ers. For us DX-ers, knowledge of the exact tx information is essential to DX-ing. Especially with the most popular propagation mode, Es, the skip area often has a narrow angle as seen from the receiving antenna.

For this reason I utterly disagree with the decision taken some time ago by the group of editors. In addition to this, particularly for FMLIST France, the names of the tx locations are very strange. Most of them start with the name of the coverage area, in most cases a big city nearby. Where the antenna location could be 30 kilometers away from that city.

Don't be mistaken, I have a lot of respect for all the hard work you put into keeping FMLIST F up to date. But I would prefer to see correct tx names. And in general, a tx location in country XX, should be listed under country XX. Anything else does not make sense. Monte Capanne is a good (or bad) example: this location is not even close to France.

73, Janpeter

I am FMLIST editor for France and Monaco (and a few more). Transmitters in FMLIST are assigned to a couutry based on the main target area, on the official license and on the country according to ITU assignments. The actual location of the transmitter is not relevant.

Many of the FM stations listed in FMLIST under Monaco are obviously targeted at listeners in France (besides a few in Monaco), and the transmitters are located on French territory (Mont Agel or Col de la Madone). However, none of these stations has got a license by the French autority (CSA). The licenses and the ITU allocations are from Monaco. Thus these stations are listed under Monaco (which is also the "official" target area, although the stations obviously are mainly interested in the spill-over to France).

It is not a mistake. These four transmitters operate with licenses by the French CSA to serve a costal area of Corse, using a highly directional antenna pointing west (250°). Again, the actual location of the transmitter is not relevant for the decision under which country a transmitter is listed in FMLIST.

The question under which country such "extraterritorial" transmitters are listed in FMLIST has been discussed thoroughly by the editors years ago. Obviously there are pros and cons for various options. Finally we decided in favour of the criteria mentioned above and apply them also in other parts of the world. I would like to keep it as consistent as possible and thus stick to the current scheme. So, I hope you can live with that :-)

It won’t work like that. Perseus filters the audio.

You are best off using SDR#.

From: harriku@...
Topic: 36119 Message: 36124

I have noticed the same but it is not in playback, only live tuning - but it is annoying!

I have also slight flutter on audio (or RF) when having 5 / 10 Mhz bandwidht tuning
with AirSpy. It is not audible in 2 MHz bw.
Any ideas on that feature??

V2 is so complicated software with so many things to adjust.

I have always considered FMLIST a superb resource – no question about that. However this current practice which has come to light goes against all DX tradition and practice. These debates were concluded in the 1970s – the country is where the txer is physically located – certainly not where the programming is ostensibly directed.

I think all dxers would appreciate these mistakes being corrected.

Regards

Stuart

Subject: Re: : Re: : Re: [SkywavesDX] Gibraltar, Andorra, Monaco, Liechtenstein?

I agree completely with Janpeter and, no mistake - I also greatly appreciate your hard work.

If the transmitter is in France, it is in France. Not Monaco. Simple!

Best wishes.

John

On 23/05/2015 19:59, Janpeter van Dijk janpeter_van_dijk@... [SkywavesDX] wrote:

Hi Uli,

I take the liberty to step into this discussion, I hope you don't mind :-)

FMLIST has been set-up and is maintained by the DX-ers community. So the set-up of FMLIST should primarily serve us, DX-ers. For us DX-ers, knowledge of the exact tx information is essential to DX-ing. Especially with the most popular propagation mode, Es, the skip area often has a narrow angle as seen from the receiving antenna.

For this reason I utterly disagree with the decision taken some time ago by the group of editors. In addition to this, particularly for FMLIST France, the names of the tx locations are very strange. Most of them start with the name of the coverage area, in most cases a big city nearby. Where the antenna location could be 30 kilometers away from that city.

Don't be mistaken, I have a lot of respect for all the hard work you put into keeping FMLIST F up to date. But I would prefer to see correct tx names. And in general, a tx location in country XX, should be listed under country XX. Anything else does not make sense. Monte Capanne is a good (or bad) example: this location is not even close to France.

>

> I sometimes receive signals from Monaco when I am in the Tyrrenian coast of Tuscany,
> but it seem that the only "real Monegasque" transmitter I've received is 102.4 (Rire et Chansons).

I am FMLIST editor for France and Monaco (and a few more). Transmitters in FMLIST are assigned to a couutry based on the main target area, on the official license and on the country according to ITU assignments. The actual location of the transmitter is not relevant.

Many of the FM stations listed in FMLIST under Monaco are obviously targeted at listeners in France (besides a few in Monaco), and the transmitters are located on French territory (Mont Agel or Col de la Madone). However, none of these stations has got a license by the French autority (CSA). The licenses and the ITU allocations are from Monaco. Thus these stations are listed under Monaco (which is also the "official" target area, although the stations obviously are mainly interested in the spill-over to France).

> On the other hand there's four transmitters situated in Italy, on the top of Monte Capanne in
> Elba Island, (88.2, 92.3, 96.8, 99.8) who are been filed under "France" because they
> broadcast french public channels (Culture, Inter, Musique, Bleu).

> But I think it's a mistake.

It is not a mistake. These four transmitters operate with licenses by the French CSA to serve a costal area of Corse, using a highly directional antenna pointing west (250°). Again, the actual location of the transmitter is not relevant for the decision under which country a transmitter is listed in FMLIST.

The question under which country such "extraterritorial" transmitters are listed in FMLIST has been discussed thoroughly by the editors years ago. Obviously there are pros and cons for various options. Finally we decided in favour of the criteria mentioned above and apply them also in other parts of the world. I would like to keep it as consistent as possible and thus stick to the current scheme. So, I hope you can live with that :-)

> Most of them start with the name of the coverage area, in most cases a big city nearby.
> Where the antenna location could be 30 kilometers away from that city.

Sorry Janpeter, I strongly disagree. Most of the transmitter locations in France are available in FMLIST with accurate coordinates (accuracy a few 10m) - a colleague and I have checked most of them using Google Earth. I trust that you can disregard the "very strange" transmitter names for a moment and locate the towers using these coordinates (if not a click at the Google earth button). The exact information needed by DXers _is_ available in FMLIST.

The location names follow the principle "Town of service area / location of antenna tower", as obtained from the CSA database, for instance Toulouse/Pic du Midi, although Toulouse is quite far away from that mountain. Please note that FMLIST does not only serve DXers, but also regular listeners - so we need the city of license as a piece of information in the database to generate service maps and frequency tables. The DXer can grab accurate location data from the location name behind the slash sign and in particular from the geographical coordinates which as I mentioned are usually quite accurate. You will find the postal address of the transmitter site under the wave button in the location table, for instance: "TDF, pic du Midi, 65200 Bagnères-de-Bigorre".

I am aware that the naming convention for transmitter towers does not suit everybody or they even find it "very strange". However, sorry - I will not spend any time in renaming these to cater the special needs of DXers, knowing that at the same time we would lose information that is useful to average listeners.

With regard to Monte Capanne - this transmitter is needed in the French listing of FMLIST because it serves parts of the northeast coast of Corse. From the perspective of a radio listener, it is a French transmitter, and they expect to see it in the radio coverage of Corse. For a DXer, it is a genuine Italian transmitter because it is located on Italian soil. By the way, that information is indicated in the transmitter name "Ile d'Elbe/Mt.Capanne [I li] ".

I cannot resolve this dilemma at the moment, and although I am more a DXer myself I will stick to the rules that we have discussed and agreed upon in the editors team about two decades ago (not being aware of the discussions in the 70s mentioned by Stuart).

I could imagine that we might implement a user setting in FMLIST that would change the display of such extraterritorial transmitters either in the country of service area or in the country of antenna tower location. I will discuss with Günter because it would need an adjustment to the database and in the way we code this information.

Janpeter, John and Stuart: Would such a user setting for the display of transmitter sites (if it can be implemented) resolve your concerns?

Dear Uli,

Thank you for the comprehensive explanation. No news for me though, I have seen your explanation in the past.

About the exact transmitter location, I was not referring to the geographical coordinates. Like you say, these are generally very accurate.

About the naming of tx sites: we would have to agree to disagree. I am just happy that the naming convention as you apply it, is only applicable to France. Although being a work in progress, I would take Italy as one of the best examples: community, followed by the rough site name indication (could be a building, a mountain, etc.), followed by the exact tx name (could be the exact address, the name of the transmitter site, etc.). I would love to see this being applied to all countries.

Your suggestion to add a user setting is much appreciated.

Keep up the good work!

Pye Green is a few km south of Stafford (near Cannock) and according to the Ofcom database is serving Stafford. But no problem with omitting "Stafford" if that's too misleading.

With regard to BBC Radio Stoke on 104.1 MHz: According to both BBC Reception and Ofcom, the transmitter is located in the town centre of Stafford (SJ923232) rather than at Pye Green. Is there any observation which suggests that it's located there or that it has been relocated to Pye Green? Otherwise this may be an error in FMLIST.

FMLIST is relying fully on OFCOM for the coordinates (based on NGR), and any errors that we might find in FMLIST should also be reported to OFCOM. I have a good contact there and they did a lot in the last months to get their data right ;-).
The last sync of FMLIST with OFCOM data was done in early March 2015. I plan to do another sync next week.

73,
Günter

re: 96.9/104.1
its definitely not in Stafford town centre,
I was at cannock chase 17/5/15 and the mast was looming over us
I can take pictures of the mast next time i visit the Katyn memorial
if that helps

Just came across another exclave which perhaps you never heard of:
http://en.wikipedia.org/wiki/Ll%C3%ADvia

Not sure if there is a FM tx there.

73,
Günter

36153. Re:: Airspy SDR first impressions

I don't have an Airspy, but someone sent me IQ files to play with and there is major overload like Paul said. My contact comments that it is very deaf, even with a preamp, compared to the Sony XDR.

So I don't know why some people were saying it is the bee's knees. Maybe they believed the marketing hype?

Peter

Hello Paul,

In short the answer is no. Best to keep IQ files of short duration if to be played back in SDR#.

Peter

i love all this stuff http://en.wikipedia.org/wiki/List_of_enclaves_and_exclaves

theres some Russian Exclaves in Belarus but they're totally
uninhabited since chernobyl

Lithuania signed away all its enclaves in Belarus when it joined the EU

The day began with weak signals from Bulgaria. Then conditions dropped off dramatically. The 6m map looked very quiet indeed, such that I went out for a couple of hours and didn't bother to leave the FDM-S2 recording. I just knew there wouldn't be any more openings. How wrong I was. My return home found sporadic E to the top of the band.

A solid three hour session followed, most of which had to be recorded. How glad I am to have an SDR which can record almost a third of the band at a time. I recorded more than 100 minutes of the DX in total, playing back later in the evening. I couldn't go through all of it though as there was just too much. I concentrated on Portugal, one of my favourite Es DX countries and many new stations were heard. I decided to ignore the recordings where Spanish signals took over.

This wasn't a strong opening by any means, but there were a few good signals and, beaming around 210 degrees, produced a sufficient drop in signals from some of my local pests that Portuguese stations were easily able to override Great Massingham, Peterborough, Mendlesham, Stoke Holy Cross and Tacolneston.

I tried something different during this opening and I was surprised by the difference it made. It was thanks to Andy Webster who commented in the Skywaves Skype chat, that he had switched to his vertical FM antenna which made the Portuguese DX stronger. I have always believed, no doubt incorrectly, that vertical is never a good polarisation for sporadic E reception, but that's how it's always been for me whenever I have flipped polarisation. I was pleasantly surprised on this occasion.

Good DX!

"Inseln" meaning islands the RDS seemingly comes from Europa Radio in Tenerife, their slogan is apparently "Radio-Europa – 7 Inseln ein Sender!", however it's listed on 100.6 as per RDS.
It's weird because the 5158 PI code on FMlist seems to be associated, (but on 100.7!) , to R. Taoro.

SDR Console is much better at this. You can stop, start and navigate very easily around a recording.

I do not know if it will play back recordings made by SDR#, but I know it will play back Perseus and Elad files just fine, as well as record its own. The only thing SDR Console lacks at present is a recording scheduler.

Jim.

Hello Paul,

In short the answer is no. Best to keep IQ files of short duration if to be played back in SDR#.

As someone said in this thread, Airspy is not like a kitchen radio. Advanced users (ie. ones with some RF engineering background) will know how to adjust the gain distribution to maximize the dynamic range and lower the noise figure. If you don't know what these metrics mean, get a kitchen radio ;-)

Speaking of HDSDR... http://www.sm5bsz.com/lir/sim1/sim1.htm#HDSDR
http://www.sm5bsz.com/lir/sim1/sim1.htm#HDSDR Lower CPU usage with so-and-so filtering is not an option. Again, most users without engineering background will enjoy the low CPU usage and completely forget about things like aliases, SNR, dynamic range, etc.
Some education is needed here.

Paul,

I have one also, it's not that bad.
However my main use monitoring the 88-108 range

It's not like a normal kitchen radio, you have to know what you do.

Carefully adjust the 3 frontend controls.
Disconnect the antenna,
1. set LNA to low value
2. adjust the other 2 controls just so high, that background artifacts get overriden
3. connect antenna
4. adjust LNA to avoid overload and also to see the weak signals

Of course during strong Es you need to turn LNA down, but in that case you have already strong signals, so high sensitivity is not needed then.

I don't use SDR# anymore, it's a real CPU hog, causing VLC to stutter when playing a mp3 stream.

HDSDR is much better allowing me to use use TVcard / Winradio and Perseus at the same time.

> t's my location + shortcomings in the Airspy
I'dd add "+ your understanding of RF" heh. Airspy has the highest dynamic range of all receivers under $1000 today. Overloading only means you don't understand how the gain distribution works on receivers. Did you follow the tuning tips in the quickstart guide?

---In SkywavesDX@yahoogroups.co.uk, <paulloganradio@...> wrote :

Despite careful adjustment I see about 14 images across 88-108, some loud and blocking otherwise clear DX frequencies. It's my location + shortcomings in the Airspy, in some other location it might not be as bad, but near a strong transmitter, it might be a lot worse.

This said, it did work well yesterday evening, because of strong incoming E skip overriding a few of those images.

Nothing is perfect, and it does record 10 mhz!, so..... more strong opening please :-)

I will give hdsdr another go as well.

I have AirSpy in distant island with no high-power local transmitters. I have compared it to Perseus FM+ (same antenna splitted). I have not found any clear difference in weak signals. Positive surprise! (No experience with close local transmitters).

But I have one annoying problem (Tuning with SDR Console V2):
With 5/10 MHz bandwidht I have slight but clear flutter on audio (I am not sure if it is in RF). It does not exist with 2,5 MHz bw. So, hardware problem?

Any quick hints what to try?
It is not distroying DX but not nice to listen.

36175. Band II Sporadic E Loggings for 28 May 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-05-28 20:34:48 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36175

Hi All,

Another day while being on the edge of an intense Es cloud. Again resulting in a short lived, weak Band II opening.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Thursday 28 May 2015
Band II Sporadic E Loggings:
MHz UTC ITU Program + Location Details km
87.70 1832 ALG Radio Chlef, Aïn N'sour (48) 1812km

Many hard core DXers are reporting the complete opposite. The S2 overload easily and needs an attenuator (!) and the FM+ is rather deaf with its high NF. You must be doing something wrong.

---In SkywavesDX@yahoogroups.co.uk, <paulloganradio@...> wrote :

The airspy has it's settings adjusted properly and still has images. My Elad FDM S2 and Perseus don't, and both cost less than $1000. I don't know what their quoted dynamic range figures are :-)

Talking about adjustments could you dial back a little on the patronisation it's terribly unbecoming of one with such obvious wit.

thanks.

I'dd add "+ your understanding of RF" heh. Airspy has the highest dynamic range of all receivers under $1000 today. Overloading only means you don't understand how the gain distribution works on receivers. Did you follow the tuning tips in the quickstart guide?

---In SkywavesDX@..., <paulloganradio@...> wrote :

Despite careful adjustment I see about 14 images across 88-108, some loud and blocking otherwise clear DX frequencies. It's my location + shortcomings in the Airspy, in some other location it might not be as bad, but near a strong transmitter, it might be a lot worse.

This said, it did work well yesterday evening, because of strong incoming E skip overriding a few of those images.

Nothing is perfect, and it does record 10 mhz!, so..... more strong opening please :-)

I will give hdsdr another go as well.

Paul,

I have one also, it's not that bad.
However my main use monitoring the 88-108 range

It's not like a normal kitchen radio, you have to know what you do.

Carefully adjust the 3 frontend controls.
Disconnect the antenna,
1. set LNA to low value
2. adjust the other 2 controls just so high, that background artifacts get overriden
3. connect antenna
4. adjust LNA to avoid overload and also to see the weak signals

Of course during strong Es you need to turn LNA down, but in that case you have already strong signals, so high sensitivity is not needed then.

I don't use SDR# anymore, it's a real CPU hog, causing VLC to stutter when playing a mp3 stream.

HDSDR is much better allowing me to use use TVcard / Winradio and Perseus at the same time.

May be you should ask in the sdr-radio-com group.

---In SkywavesDX@yahoogroups.co.uk, <harriku@...> wrote :

No, it is not this kind of problem (link below).

When I use 5/10 MHz bw and listen some usual FM-station, for example 89.8 MHz,
the audio includs slight flutter ("vibration"), it is not clean audio.
I wonder it does not exist in 2,5 MHz bw.

Noboby else has reported this, so I might have own internal problem. The AirSpy is
remote-controlled and I will have closer look at the system next week when at present:

Right, I didn't dream. I read it on SkywavesDX forum itself:
http://skywavesdx.org/viewtopic.php?f=37&t=365&p=3687#p3687
http://skywavesdx.org/viewtopic.php?f=37&t=365&p=3687#p3687

I don't know if these figures ring in your head (from http://microtelecom.it/fmplus/ http://microtelecom.it/fmplus/)
Noise figure: 9dB
IIP3: 8dB

But the clear advantage of these radios is that they are easier to manipulate. Just like a kitchen radio ;-)

---In SkywavesDX@yahoogroups.co.uk, <satnipper@...> wrote :

Err no.

The S2 does not overload easily – I'd say most dxers are reporting it needs a pre-amp. The FM+ is also not deaf and I've not seen that reported. The FM+ does overload in London but I've just tested the FM+/Elad and Sony XDR in rural south of France and all have around same sensitivity (no overloading) with XDR being just more sensitive than the others.

You would be advised not to continue your current attitude of insulting your clients (and potential clients) and instead work with them to make your products better.

Stuart

Instead of defining what a die hard DX is, let's define gain distribution, noise figure and dynamic range - More accurate than emotions and decades of experience.

There are three gain settings exposed for Airspy. The ADC offers about 80dB of wide band dynamic range and 90dB at 300kHz bw (the typical WFM bw). The gain distribution should be set to minimize the noise figure of the system (down to the nominal 3.5dB) while keeping the strongest and weakest signals within the dynamic range of the ADC. The analog dynamic range in the other hand is about 100dB which is better than what you may need on FM.
Let's assume a wide band setup: If the blocker signal is 80dB higher than the signal of interest, you will still have 90 - 80 = 10dB SNR given you adjusted the gain distribution properly. And 80dB difference is extreme.
If you offset the gain, say, 10 higher you will saturate the ADC and get overloading. If you set it 10dB lower, the blocker will be at -10 dBFS and the signal of interest will be bellow the noise floor. So, you have to be really careful.
Given all of this, can you describe the spectrum you get (blocker and signal of interest in dBFS) and the associated settings?

---In SkywavesDX@yahoogroups.co.uk, <paulloganradio@...> wrote :

"Many hard core DXers are reporting the complete opposite. The S2 overload easily and needs an attenuator (!)"

Not here it doesn't, but the airspy overloads at this location with the same antenna.

"and the FM+ is rather deaf with its high NF. You must be doing something wrong"

Not my experience either.

Do you really think someone with more than three decades experience in radio can't adjust three sliders properly?

What exactly is a hard core dxer by the way?

It can be just as easy to operate as a kitchen radio - with meh performance - or as complete as a lab instrument when you know what you are doing.

Paul,

I have one also, it's not that bad.
However my main use monitoring the 88-108 range

It's not like a normal kitchen radio, you have to know what you do.

Carefully adjust the 3 frontend controls.
Disconnect the antenna,
1. set LNA to low value
2. adjust the other 2 controls just so high, that background artifacts get overriden
3. connect antenna
4. adjust LNA to avoid overload and also to see the weak signals

Of course during strong Es you need to turn LNA down, but in that case you have already strong signals, so high sensitivity is not needed then.

I don't use SDR# anymore, it's a real CPU hog, causing VLC to stutter when playing a mp3 stream.

HDSDR is much better allowing me to use use TVcard / Winradio and Perseus at the same time.

Instead of defining what a die hard DX is, let's define gain distribution, noise figure and dynamic range - More accurate than emotions and decades of experience.

There are three gain settings exposed for Airspy. The ADC offers about 80dB of wide band dynamic range and 90dB at 300kHz bw (the typical WFM bw). The gain distribution should be set to minimize the noise figure of the system (down to the nominal 3.5dB) while keeping the strongest and weakest signals within the dynamic range of the ADC. The analog dynamic range in the other hand is about 100dB which is better than what you may need on FM.
Let's assume a wide band setup: If the blocker signal is 80dB higher than the signal of interest, you will still have 90 - 80 = 10dB SNR given you adjusted the gain distribution properly. And 80dB difference is extreme.
If you offset the gain, say, 10 higher you will saturate the ADC and get overloading. If you set it 10dB lower, the blocker will be at -10 dBFS and the signal of interest will be bellow the noise floor. So, you have to be really careful.
Given all of this, can you describe the spectrum you get (blocker and signal of interest in dBFS) and the associated settings?

---In SkywavesDX@..., <paulloganradio@...> wrote :

"Many hard core DXers are reporting the complete opposite. The S2 overload easily and needs an attenuator (!)"

Not here it doesn't, but the airspy overloads at this location with the same antenna.

"and the FM+ is rather deaf with its high NF. You must be doing something wrong"

Not my experience either.

Do you really think someone with more than three decades experience in radio can't adjust three sliders properly?

What exactly is a hard core dxer by the way?

I'dd add "+ your understanding of RF" heh. Airspy has the highest dynamic range of all receivers under $1000 today. Overloading only means you don't understand how the gain distribution works on receivers. Did you follow the tuning tips in the quickstart guide?

---In SkywavesDX@..., <paulloganradio@...> wrote :

Despite careful adjustment I see about 14 images across 88-108, some loud and blocking otherwise clear DX frequencies. It's my location + shortcomings in the Airspy, in some other location it might not be as bad, but near a strong transmitter, it might be a lot worse.

This said, it did work well yesterday evening, because of strong incoming E skip overriding a few of those images.

Nothing is perfect, and it does record 10 mhz!, so..... more strong opening please :-)

I will give hdsdr another go as well.

Hi C?dric

I will go to Friedrichshafen and also some other guys from the
UKW/TV-Arbeitskreis. We will have a stand at the exhibition (in the main
hall A1, stand No. 746 - see also the following weblink in german
language with a plan:
http://www.ukwtv.de/cms/ukw-tv-arbeitskreis/neuigkeiten-im-arbeitskreis/572-ukw-tv-arbeits
kreis-auf-der-ham-radio-2015.html)
and we will try to promote the FM and TV DX hobby, as we already did in
the last years.

If you also go there, a personal meeting would be interesting. In that
case, please write me a personal email and I will send you my mobile
phone number.

Well guys. Feel free to use whatever you want. DSP is hard to crasp even for seasoned engineers, so I can't blame "real DXers" who don't get the point about its importance and all the compromises done in the vast majority of the applications to lower the CPU usage. This is the kind of education I'm speaking about. But I definitely think this kind of knowledge has not democratized enough.
Just passing by, sorry for the disturbance and happy real DXing ;-)

Indeed !
Read on, and learn what real DXers need. :-)

SDR# created VLC stuttering already with the RTL stick when running in WFM.
I was totally puzzled, and never saw that on HDSDR.
So I dumped SDR# since then.
Just because of Paul's issue I started it again, and switched to WFM, its audio is badly stuttering. All other programs are stopped. That is on a 3 GHz dual CPU !!!
HDSDR is much better, I can run all the other programs that I need.
The ExtIo is a bit bad, I tried the other created by Andrea that has lower spurs, but has ~10% higher CPU usage. So I went back to the other. Slightly higher spurs is way better than a complete stuttering Rx.
So a lot more improvements can be done on SDR#
Also I dislike the GUI with the large controls that waste a lot of precious screen estate. Don't think SDR# is the only one app running on my system. That mistake a few other creators also made. :-(
HDSDR has its flaws too, like missing deemphasis, but the slow moving waterfall, better annotated frequency ruler, and smaller screen usage makes it my favourite.

SDR receivers do not behave the same way as full analog ones. In our case the ADC samples at 20MSPS which gives 10MHz bw, then it it decimated to around 300kHz THEN the channel filter is applied to get the nominal 250 kHz or lower. The "selectivity" in the traditional sense is realized using "lose" analog filters and very sharp digital ones. In a full analog radio, one would put one or multiple IF filters to narrow the bandwidth to a usable level. More advanced analog receivers even offer the possibility to switch a bank of IF filters. In SDR, you have even more choice: The bandwidth can be set continuously from a few Hz to the maximum bandwidth of the ADC eventually notching spurs or completely blanking the blockers. Also, there are fancier processing techniques in DSP for noise reduction apart from the filtering itself, and I think they should be considered for high performance RX systems.
Experience is fine for getting good results in a given situation. But at some point signal processing knowledge is key to discover optimizations that cannot be intuitively consulted. I like technical challenges and FM DX might be one of them in the future developments.
Thanks!

I’m sure I speak for other dxers when I say you are very welcome here. Without meaning to sound patronising I’m sure you can learn a lot from experienced dxers such as Jurgen and Paul which will greatly help you to improve your products – hardware and software.

In the other email you mention a 300 kHz WFM bandwidth example. No Band II dxer would use such a wide bandwidth – I would say 150 kHz and below (down to 80 kHz perhaps?) are what the use cases should use.

Bien a toi

Youssef and all,

There seems to be some confusion here. The attraction for FMDXers for an SDR such as Airspy is the ability to monitor 10MHz of bandwidth and being able to record it and playback the IQ recording later for identification of individual stations either by RDS or other means.

You seem to be stressing that Airspy works best, in the presence of strong blocking signals, by decimating down from 10MHz to about 300kHz. This is not of use to an FMDXer! This means in affect that your advertised 10MHz bandwidth device can only be used at 300kHz bandwidth for band II FMDX.

The ability to change the IF bandwidth to any value from 0 to 250kHz is very useful yes, but that can be achieved with all SDRs in the current SDR apps.

To show you I am not your enemy, I regard the SDR# (with Vasili's MPX plugin)/RDS Spy combo to be currently the best tool for recovering RDS from marginal FM DX signals.

Regards

Peter Wilson

** Personal 'First'

Another belter of an opening! Lots of recordings and not a lot of time for live listening, so plenty of recordings were checked afterwards.

There was a big frustration today. The FM List website was extremely slow when it came to entering loggings. This appears to be a Windows 7/64 problem, or the fault of my poor, overworked computer. I am quite sure it is not the FM List itself as the problem exists at 03:00 in the morning. At worst, it takes fur to five minutes to enter a logging. The Windows egg timer just goes round and around and around. Clearing my cache doesn't help. Neither does re-starting the computer. Switching browsers can help ... for a few minutes, then it's back to square one, so it has been a battle to compile today's log.

The conditions? Lots of stations from a wide area. It wasn't always easy to determine the sites as there was more than one path coming in from the same country, at the same time, so many loggings got away. Even so, I am very pleased with 228 loggings and 88 personal firsts.

I was driving through town when I was first aware of the opening. I turned on the car radio, which had been left on 87.9, to hear French and the RDS "INTER" and France Inter red and white logo displayed on the screen. I love RDS v2.0 as the station's logo can appear before the PS name.

When Italy appeared around 1723, signals were peaking at S9+50dB on the FDM-S2. (Don't forget to factor in my 20dB pre-amp.)

Good DX!

John Faulkner
Skegness, Lincolnshire (JO03dd) <3m ASL.
Blog: http://skegnessdx.blogspot.co.uk
YouTube Channel: https://www.youtube.com/user/g1vvp
Vimeo Channel: https://vimeo.com/skegnessdx

Receivers:
Elad FDM-S2 (Meteor Scatter)
Sony XDR-F1HD with Konrad i2c mod. (Tropo/Scatter)

Aerials:
Körner 9.2 @ 5.5 metres agl. QTH is 3 metres asl.
Triax FM3, one metre above the ground as a phasing antenna.
Fringe Electronics 20dB & Labgear 30dB band 2 pre-amps.
HS Publications Antenna Phaser.

Software:
Elad FDM-SW2, SDR Console File Analyser & RDS Spy via VAC.
XDR-GTK v0.3.1 for the Sony XDR-F1HD

Rotator:
Yaesu G-5500 azimuth & elevation rotator, allowing antenna to be vertical, horizontal, etc.

That's a shame Ruud.

We love the FM List and really appreciate the hard work involved, but a lot of people using this at the same time can slow things down. I am sure that my own problems are due to Windows as the slowness happens randomly even at 03:00.

I have many other problems with Windows 7 (Pro 64 bit version). That's Windows for you though.

Best DX.

John

Yes, I am very satisfied to AirSpy, too. The main reason to buy it was the amazing 10 MHz bw-recording, and it was a nice surprise that the sensitivity to read weak signals on FM-band is so good with that bw!!

I did not expect it could handle my close local 6 x 60 kW national radio transmitters (18 km away) without overloading, at my home, so I did not even test it here. I have it in distant island far away and it is perfect there.

I think the weak flutter/vibration, which I have in audio of a single FM-station, when I use 5/10 MHz bw, comes from slow USB2.0, which can not handle it. I must try it with dual USB-cable later.

Well, the usable dynamic range depends on so many parameters and the way to achieve it in SDR architectures is oversampling and decimation. The debate whether full analog is better than SDR technology depends on your use case. If you need wide band performance, then there's no contest. The analog radios can't do that. Now when it comes to actual narrow band performance, I'd say watch Leif videos and learn how to make an SDR behave better than an analog radio, and what parameters are key to successful reception.

> yes, but that can be achieved with all SDRs in the current SDR apps.

This is exactly my point. Not all SDRs have the same narrow band performance. This have been demonstrated with careful measurements http://rtlsdrblog.rtlsdrblog.netdna-cdn.com/wp-content/uploads/2015/01/results_3.png with real signals injected to multiple radios, cheap and expensive ones.

Now I have the feeling that most of the work left is about simplification. We need to make SDRs look like kitchen radios while keeping the performance advantage - we cannot expect from everybody to be a radio engineer.

> enemy
I have no enemies. Hopefully :-) Vasili contributed, and is still contributing a lot to the SDR# project. He's one of the rare people who know how to use the SDR#'s DSP to build useful stuff.

---In SkywavesDX@yahoogroups.co.uk, <pe1etr@...> wrote :

Youssef and all,

There seems to be some confusion here. The attraction for FMDXers for an SDR such as Airspy is the ability to monitor 10MHz of bandwidth and being able to record it and playback the IQ recording later for identification of individual stations either by RDS or other means.

You seem to be stressing that Airspy works best, in the presence of strong blocking signals, by decimating down from 10MHz to about 300kHz. This is not of use to an FMDXer! This means in affect that your advertised 10MHz bandwidth device can only be used at 300kHz bandwidth for band II FMDX.

The ability to change the IF bandwidth to any value from 0 to 250kHz is very useful yes, but that can be achieved with all SDRs in the current SDR apps.

To show you I am not your enemy, I regard the SDR# (with Vasili's MPX plugin)/RDS Spy combo to be currently the best tool for recovering RDS from marginal FM DX signals.

Regards

Peter Wilson

Log out of FMLIST, close and restart your browser, log in - that would be the first thing to try before going crazy ;-)
You could also have used the [clear] button next to the frequency field in myFM.

FMLIST runs some maintenance jobs in the night. Database backup is done between 2230 and 2300 UTC, and there is a vacuum/reindex task starting at 0200 UTC.

No RDS v2.0 out in the field yet. I guess you are driving a Peugeot or Citroen? In that case, the station logos are stored in the car radio, and displayed based on PI code. Also some VW cars can do that. Curious to see if a French logo pops up when you get Norway (same PI code).

73,
Günter

Hello Günter.

I already tried this and it makes no difference. My Windows 7 is surely the problem, as I pointed out. The problem is completely random though, which is unusual. I believe some of the background processes are to blame - even after a fresh restart and only running the necessary programmes. I did a full Wondows 7 re-installation around Christmas to cure these problems - which it did, but I have many, many programmes installed again now.

Whatever I try to do with my computer, it works against me. :O) Very annoying.

Best DX!

John

You're right. When you run out of dynamic range, you can no longer hear the weak signals. That said, you can see on that table there are many 16bit SDRs that have less dynamic range than Airspy, and the only one that beats it is the SDR-14 from RFSPACE. What makes the difference here is:
ENOB (Effective Number Of Bits), Analog dynamic range which depends on the dynamic characteristics of all the analog stages preceding the ADC, and the gain distribution, Oversampling factor. You get one bit of resolution (about 6 dB of dynamic range) every time you divide the sample rate by 4Relying on a single number to predict the RF performance won't work, you need many parameters and the three I listed are, in no particular order, the most influent ones. In the end you will have to do actual measurements by injecting a blocker signal with a weaker one and assess the SNR.
I think I should expose the IF filter setting so one can cancel the blockers before even they reach the ADC. For the moment, it's a debug parameter in the config file and it should be promoted to a user setting:
<add key="airspy.debug" value="1" />

> There are three gain settings exposed for Airspy. The ADC offers about 80dB of
> wide band dynamic range and 90dB at 300kHz bw (the typical WFM bw). The gain

To tell you a real world situation:

I beamed my 15ele ant with preamp to my local 25kW tx 20km away

Peak level is +20dB
Noise floor is -75dB
I can still hear BBC tx 600km away running 250 kW, just above the noise.

All measured on SpecLab with Perseus.

So I need at least 95dB dynamic range.
Perseus works fine.

I had to strike a balance in reducing the preamp gain to avoid overloading and still get the BBC tx everyday.

Now assume your 20km station runs 100 kW or higher, that other DXers have to face. Then 95dB is dynamic range way too small.

Now you will understand that your 80dB (or 90dB) becomes hopeless. You need an ADC with at least 16bit or more. Elad proved that apparently.

Thank god that I don't live near such strong tx.

Thank you Andrea.

Are you saying this is 100% Europa Radio from Tenerife? Or is there
still some uncertainty?

Thanks.

John

Hi John,

Fact is, it looks as the RDS of the station you logged on 88.5 it's the same as Radio Europa's, which is listed on 100.6 however. It may well be that Europa operates a second frequency on 88.5.

But I wonder... Considering that the PI Code you provide - 5158 - corresponds to a station operating from Canarias on 100.7, could it be that there's a mismatch with what you're reporting as it's being extracted from your log? Perhaps we're not talking about 88.5, but we really should read 100.6?

Andy

Thanks Andrea.

That would be a difficult mistake to make as 88.5 would have been recorded on a different file to 100.6. The conditions at this time were good to south-west Portugal, which would tie in nicely. What are the chances of another Europa FM being on the same frequency? Slim I guess.

I have seen Europa FM on several other frequencies this month and none of them had the "Inseln__ ein_____Sender__ TFnderd_ 100.6_M_" PS. It certainly seems like a strong possibility.

I wonder if the "TF" part of the PS name is for _T_e_N_erife.

I checked the conditions on DX Maps at that time and there were multi-hop Es between Tenerife and Germany. Not sure I would have been able to tap into that path, but there was quite a cluster of high MUFs running into band 2 at that time. It's certainly possible.

I have deleted the files now, as I need to every day to make way for the following day's files. But the logging itself would have been made when playing back the recording, so the logging itself would have been manual, not automated.

Maybe somebody in Spain knows more.

Thanks again Andrea.

John

Hi John, I am not in Spain, but still :-) I simply checked the Radio Europa web site and found a comprehensive description of their transmitter sites. They are indeed active on 88.5 MHz from Aroyo, close to Santiago del Teide. Congratulations on getting CNR! 73, Janpeter ----- Oorspronkelijk bericht ----- Van: "'John Faulkner, Skegness' john.faulkner@... [SkywavesDX]" Aan: SkywavesDX@yahoogroups.co.uk Verzonden: Vrijdag 29 mei 2015 20:37:01 Onderwerp: Re: [SkywavesDX] Skegness Log: 27-05-15 Thanks Andrea. Topic: 36164 Message: 36219

It is "Radio Europa" (http://www.radio-europa.fm/) and not "Europa FM" (which also exists on the Canaries).
In FMLIST we have this PS on 98.7:

Radio___ Europa__ viele___ Inseln___ ein____ Sender__ TF_Nord_ 100.6_FM 98.7_FM_ TF_Ssd__ 106.8_FM 92.2_FM_ wir_sind von_hier Tel._902 10_17_08

And now for the real facts: http://www.radio-europa.fm/radio-kanaren-frequenzen.html clearly mentions "Sendeanlage von Aroyo bei Santiago del Teide schaltet sich die 88,5 FM zu". This is an exceptional precise indication of the transmitter site. I will ask our Spanish FMLIST editors to update. Keeping track of all those tourist radio stations is not a simple task.

73,
Günter

36220. Re: AW: [SkywavesDX] Skegness Log: 27-05-15

Yahoo group: SkywavesDX (2015)
Date: 2015-05-29 20:50:01 UTC
From: John Faulkner, Skegness
Topic: 36164 Message: 36220

What a nice surprise!

I had been meaning to search for a website for Radio Europa FM in Tenerife to see if I could find the frequencies used. One thing and another got in the way and I forgot, but I happened to be chatting with Nick Gilly on the phone earlier this evening and he kindly did the research and found the website with all the details. I can remember hearing German at time too and just assumed it was a holiday station in the south of the Spanish mainland. So 100% Canaries reception and thank you very much for the confirmation.

Updating the log now.

Best DX!

John

From: pe1etr@...
Topic: 36221 Message: 36221

Just received my first "TEP zone" evening Es.

Nakhon Ratchasima (Korat) to Singapore

952 miles/1532 km

SNG Singapore

88.9 BBC World Service 5kW

92.4 Symphony 10kW

Some unids including Malay or Indonesian lang on 88.8 adjacent to BBC Singapore.

Tecsun PL-606 telescopic whip

Peter Wilson
Korat

From: nick gilly
Topic: 36223 Message: 36223

Some more clips from the 23rd of May, plus a couple of tropo+Es clips from the 27th:

https://app.box.com/s/tqrm89rfu14rf04sru89qogxqo4yn7eq - unid Moroccan on 93.7, maybe Radio 2M or SNRT Tetuoan?

https://app.box.com/s/24hgzjn64kqmghrb0qx5rqtq7t7jixom - 87.9 SNRT Inter with English programming

https://app.box.com/s/z8xnhafdlyt1gp26z95c3194z1ijvjgi 107.7 unid Spanish

https://app.box.com/s/ohr19o1wfczakjkts0yk9sikk5ixpi22 102.5 AFN Rota

https://app.box.com/s/o57q9h58row0iyupyni66y6prrqvbatd 103.5 SNRT Quran unlisted site. Anyone know more? In the clip there is a YL reading out towns and frequencies. We need an Arabic speaker to hear this

https://app.box.com/s/fqite1tn2r0nznrga5xdbr4ke7811yep 88.3 another unlisted SNRT Quran tx

https://app.box.com/s/nlji76ov30qo50vqzpmifmetplnlsjmu 91.4 unid French Moroccan. Any ideas?

https://app.box.com/s/464dkkumeznzp05gg2fldna2xs740xdt 87.9 unid Greek with a pop station also, probably Italian. Any ideas on the Greek please (maybe NERIT 1?)

https://app.box.com/s/d9xpss5uqdywibvbr52kl4i132gyly9q 89.8 another unid Greek, sounded similar to NERIT 1's web stream when I checked shortly afterwards, but I'm not sure to be honest

https://app.box.com/s/b3pmwh0t1y4czsd4hzo9aknuzu6zccca 89.0 Radio Drininoupoli pt 1. This station was in on & off for about an hour and was frequently the only Es signal on the band. Very odd.

https://app.box.com/s/dx45c7m2l85ejm98f16duy0pp5nheecr 89.0 Radio Drininoupoli pt 2

https://app.box.com/s/5ks1ayjdxghlbmbeg7roab3wkr8ougcv - 95.7 France Culture, Toulouse/Pic du Midi via tropo. Some Portuguese Es tries to push it out of the way towards the end of the recording

https://app.box.com/s/ppohebv50dea07hofp2o2h5ooppnovg0 87.9 France Inter Toulouse/Pic du Midi (tropo) and Spanish via Es (OMR FM Valencia)

Any help with the UNIDs much appreciated. Good DX.

Nick, Whitchurch, Hampshire.

36226. Re:: Airspy SDR first impressions

Yahoo group: SkywavesDX (2015)
Date: 2015-05-30 15:30:39 UTC
From: brian.martlew@...
Topic: 36152 Message: 36226

Thought I'd follow up on this.

I've owned an Airspy for a few weeks but only today given it an airing on Band 2.

Generally performance is impressive with no obvious signs of overloading (despite a number of 250kw txs within 50km). Dynamic range and sensitivity are both good also.

The catch - on my unit at least - seems to be the IF image rejection. I've only done some very crude measurements but it seems to be in the range 50-55db.

The Airspy uses a 5MHz IF (when in 10MSPS mode) and appears to use a low side LO so the images appear 10MHz up the band.(eg. a strong signal on 89.3 MHz also appears on 99.3 MHz)

Given that 70db+ signals are to be expected from my local stations it means that the top half of the band contains a number of 10-20db images!

I've not yet had the opportunity to see what happens during a strong Es event.

The specs for the Airspy don't quote a figure for image rejection but discussions in other places and the spec for the R820T2 tuner suggest a "typical" figure of 65db

Brian

Nick, I tried to ID 107.7 Spain. Judging by the accent of the presenter & style of presentation it sounds like a community station. They were talking about a project consisting of rooftop painting & photography. A web address was given as well although I didn't quite catch it. That is all I can go by.

That's rather strange. The image rejection should be always better than 65dB. Are you using the same gain setting in your scan? Note that the AGC may alter your results.

Hello,

There are hungarian. On 88.9 you received "Radio 1" from Bekescsaba. On your record is a part of local cultural event guide from Bekescsaba (it is local for me, this transitter is 9 km far from my QTH :-)), on 87,6 is a talk program, may be MR1 - Kossuth and on 88,3 is an other talk program, may be Maria Radio.

regards,
Jozsi from Hungary

Hello, i'm from Spain.
They are speaking about this:
http://www.theguardian.com/world/2014/sep/01/spain-reclaiming-rooftops-redetejas-culture
Is not easy to know what is the exact transmitter or the city but the
language is Andalucian.
I can't to confirm nothing but i think Sevilla.
I can to send to redetejas web site, the link with the audio and ask for
this radio interview.
Saludos!!

Very nice!

I wonder if it was Rowridge (250kw)? I am 40km away from there and barely had a sniff of Es all day, even on 6m.

The only other high power Radio 2 TX is in northern England, not too far from the Scottish border.

Hi Nick,

I had my sister listen to the SNRT Quran audio clip. She has lived in Jordan for more than 20 years and is fluent in Arabic.
Indeed the lady is reading out city names and frequencies. But only big city names like Rabat and Casablanca are mentioned, with frequencies for the Quran program that are already listed in FMLIST. The frequency that you received was not among the ones mentioned.

73,
Janpeter

Thank you Günter. :O) *This works!* But not always for very long.

I wonder what the problem is with modern browsers which causes these problems. It must be more than just the cache filling up as the problem sometimes exists when the cache has only just been emptied.

Chrome is the biggest culprit for running slow with FM List, but other sites also have problems. Run more than three or four instances of Chrome and the computer sometimes falls over. Firefox is not as stable as it used to be can also be slow with FM List, though less frequently. The problem is definitely not FM List itself.

I wonder if there is a more suitable browser to run FM List? I used Opera for a while and don't recall any problems. Will give this another try.

The only thing which makes me go crazy is the amount of problems I have with Windows 7 in general. It can be very frustrating. My logon profile became corrupted this morning so I had to fix it in the registry. Windows 7 has been a problem for me on all machines. It has a mind of its own.

Hi Günter, John and Ruud, Just to add some of my recent experience with FMLIST. Not to criticize, but to provide input to improvements or solutions.99% of my logging sessions, I am using Firefox. Only if FMLIST gets completely stuck, I would try to see if switching to IE brings a solution. This has not happened this year.During busy times, like with the May 15th opening, I would notice a significant slow down of the FMLIST response time. Going up to 30 seconds or more to load a page. This is especially true when no filter is applied, so the search is for all stations on a given frequency.30 seconds for a page to download, when the DX is pounding in, is creating unhealthy stress levels with me. So I would like to see this being improved. The slowing down is not really a malfunction of FMLIST, it is simply heavy traffic on the FMLIST server. At least, to me that is the only plausible explanation.Since I would expect the number of active DX-ers to further increase substantially, this will be adding to the problem. And also, May 15 was a good day, but still far from being exceptionally good. So my opinion is that some smart solution should be found. Unless the FMLIST server capacity can be further extended. I know that Jürgen Bartels has developed StationList. But this is a standalone development, not integrated with FMLIST. In general I would suggest a solution into the direction of a download of (part of) the database upon signing in to MyFM. The user can then work in this downloaded database on his own computer. Upon signing out of MyFM, the loggings will be uploaded to the FMLIST server.Could something like this work? 73,Janpeter

Log out of FMLIST, close and restart your browser, log
in - that would be the first thing to try before going crazy ;-)

You could also have used the [clear] button next to the frequency field in myFM.

73,Günter

Thank you Günter. :O) This works! But not always for very long.

From: davebunyan@...
Topic: 36152 Message: 36262

From the AirSpy specifications: "10 MHz panoramic spectrum view with 9 MHz alias/image free"

In comparison the SDR Play offers a maximum ADC sample rate of 8 MHz and in reality the usable bandwidth is around 7.2 MHz as sensitivity rolls right off beyond +/- 3.6 MHz. [and pro-rata with the smaller bandwidths].

So with regard to images/aliases on the AirSpy - do you see any images within +/- 4.5 MHz of the centre frequency? e.g. place the strongest station to one side of the centre frequency (say 500 KHz and see if it shows up as a mirror image on the other side. This happens with the SDRPlay unless you ensure that the I/Q amplitude/phase are precisely balanced out. This is done automatically in SDR# with v2.0 of the SDRPlay plug-in and on HDSDR has to be set up manually under the Options menu. It shouldn't happen with the AirSpy as it has a different receiver architecture.

Dave,
Airspy doesn't use a zero IF architecture like SDRPlay. As a consequence it doesn't suffer from mirror image signals caused by I/Q imbalance. Neither does it have a troublesome centre frequency spur.
The few images I've seen are IF images caused by strong signals on the opposite side of the local oscillator finding their way into the IF processing chain. In the good old days of analogue superhet design a 10.7 MHz IF was chosen to place the IF image frequency 21.4 MHz (2 x 10.7) away from the wanted signal and therefore outside of Band 2.
The IF frequency of Airspy varies between 2.5 and 5 MHz depending on sample rate and therefore the image frequency is only 5-10 MHz away and often falls inside the band. Rejection is specified at 65db which is good enough for all but the strongest of signals - but I've got enough local powerhouses near me for them to still make themselves known.

From: Janpeter van Dijk
Topic: 35847 Message: 36267

Hi All,

A persistent sporadic E opening on the OIRT Band today. It was nice to be able to hear the Radio Rossii regional program for Karelia.

On the downside, having an OIRT Band opening for many hours on June 2nd, while the MUF does not reach any higher than 85 MHz, is not a good sign.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Hi Ruud,
on 88,70 signal was very strong so I think it is not was wrong picode...
Today , for example, came Shems FM but picode was 7213...
for the 92.1 I verified streaming algerian, but it was difference!
Thanks
Cristian

Hello Cristian.
Was 91.2 not tropo from Metili ALG transmitter?
Otherwise it could have been ERTU EGY Suez.
PI 7737 on 88.7 was that not a fake PI code?
Only listed TUN transmitter is Shems FM with other PI.

Thanks Janpeter, much appreciated. See me comments below.

> 99% of my logging sessions, I am using Firefox. Only if FMLIST gets
> completely stuck, I would try to see if switching to IE brings a solution. This
> has not happened this year..

From every "complete stuck" situation in the last years, there were lessons learnt and solutions implemented. I will not promise that it won't happen in the future, but statistically we should be on the save side.

> During busy times, like with the May 15th opening, I would notice a significant
> slow down of the FMLIST response time. Going up to 30 seconds or more to
> load a page. This is especially true when no filter is applied, so the search is
> for all stations on a given frequency.
> 30 seconds for a page to download, when the DX is pounding in, is creating
> unhealthy stress levels with me. So I would like to see this being improved.
> The slowing down is not really a malfunction of FMLIST, it is simply heavy
> traffic on the FMLIST server. At least, to me that is the only plausible
> explanation.

Correct. And 30 seconds is two eternities. Way to long.
Just to explain: The FMLIST server is used by FMLIST, FMSCAN, and a number of other websites. Some queries are pretty simple, and are fast also under heavy load.
Other pages aggregate and filter data in a more complex way. They are fast with few users, but slow down when many users access the server.
I have been spending a lot of time to optimize things, creating lean and smart (SQL) code. But - by design - there are complex tasks (most of the FMSCAN stuff) which cannot easily be optimized. We have started preparations to move the server to a newer HW platform, but there are plenty of compatibility issues and I have only limited time to spend on this. I would need an experienced PHP programmer for a few weeks.

> Since I would expect the number of active DX-ers to further increase
> substantially, this will be adding to the problem. And also, May 15 was a good
> day, but still far from being exceptionally good.
>
> So my opinion is that some smart solution should be found. Unless the
> FMLIST server capacity can be further extended.

Capacity is one thing - but architectonical measures are smarter and better ... so I like your approach.

> I know that Jürgen Bartels
> has developed StationList. But this is a standalone development, not
> integrated with FMLIST.

Yes and No:
No: StationList is integrated -it gets all required data from FMLIST, and places proper log records into FMLIST.
Yes: It is not integrated from a UI / SW tool point of view.
But I think it serves the purpose!

> In general I would suggest a solution into the
> direction of a download of (part of) the database upon signing in to MyFM.
> The user can then work in this downloaded database on his own computer.
> Upon signing out of MyFM, the loggings will be uploaded to the FMLIST
> server.
> Could something like this work?

Yes, certainly. Especially the first part would be fine, because the biggest "stress" for FMLIST server (and DXers) is the repeated loading of the myFM main page.
I implemented the "Sports" vs "Comfort" option last summer, to optimize performance. And I think there is some room for more "Sports", cutting down some features.
Log posting (upload) should not be a problem - I would prefer it in realtime, but bulk is possible as well.

But let me remind you of other solutions:

Andy Pritchard's RDS Logbook: FMLIST is supporting it since many years, and I have forgotten how it works, perhaps Andy can explain. For sure, it gets data from FMLIST, and puts back logs.

Olivier Guillaume has written software for the Sony XDR - it can post logs, and - as it does not get data from FMLIST - FMLIST will try to find out the transmitter location. Was in use last season.

DF8RY CSVUserlistBrowser: Initially created for WinRadio receivers, works as a standalone tool or can communicate with many SDRs. Gets personalized data files from FMLIST, and can put back logs (at least for MWLIST, the FMLIST interface is easily implemented).

Then, there is good old RDSDX. The Finnish guy has disappeared many years ago with the source code in his orchid garden, but still many users download data files. In every readme.txt that comes with the download, I ask people to send me their RDSDX log files. Guess how many I received? Whatever number you guess, divide it by that number. That will be the correct result.

As you can see, there are a number of offline solutions. FMLIST is open for, and I can only encourage, such offline solutions, where "offline" means that you do not use up internet bandwidth and server capacity to identify a program and a transmitter site. Once that is done, posting a log to the web server is simple, and efficient, sharing your log with the rest of the gang.
Personally, I cannot handle development of a DX logging client - but I am ready to help and support any good tool, like the ones I mentioned above.

A question regarding performance: Assume that page load performance is perfect - how many logs would you post per minute? I'd use this number, multiply by 150 DXers - that gives me a good baseline for a load test on log posting.

Günter

36271. Sporadic E logs for 2/6

Yahoo group: SkywavesDX (2015)
Date: 2015-06-03 06:21:27 UTC
From: thanos.thessaloniki@...
Topic: 36271 Message: 36271

Hello and good morning to everyone! Yesterday I had a great Sporadic E from Middle East and I received :
88.5 88FMB
88.7 Radio Masr
88.8 IBA reshet dalet

Here's a video : https://m.youtube.com/watch?v=VMTnZlVW_gw

I only received these stations because the band is full here , otherwise the list would have been much bigger ;)

Thanos

36272. Re: [SkywavesDX] AW: Skegness Log: 28-05-15 (Browser Issues)

Yahoo group: SkywavesDX (2015)
Date: 2015-06-03 07:00:44 UTC
From: Janpeter van Dijk
Topic: 36204 Message: 36272

Thank you for your detailed answer Günter. It once again shows that the FMLIST project is an exceptional one, with unique functionality. It has even reached a stage where money could be earned with it. But that is a totally different subject.

I guess I just need to sort out to get StationList to work. I have been in contact with Jürgen and I have downloaded one of the previous versions of StationList. What I don't like though from DX-ers logs via StationList is that in the remark column it shows something like (direct)StationList. Instead of for example the RDS information received.

The other option available to me is the Olivier Guillaume software. But as you say, it uses a database created by the user. In my case it is my bandscan as created with myFM.

Your question is a difficult one. In case within one minute all DX is received with instant RDS, it would be possible to log one station every ten seconds I would say. So you could use this number as the upper limit. Although I would not exclude the possibility of future more sophisticated receiving systems. Where an SDR receiver that samples the entire FM band, auto-picks all RDS codes, automatically uses those as input to a search engine for automatic processing of loggings. That would multiply my 6 loggings per minute by approximately 100. But now I am dreaming and I would not be engaged in something like that. I am just too old for that.
But maybe you should rethink the number of 150 DX-ers. If I look at the country where I live, the number of active DX-ers using FMLIST is about double the total number of DX-ers that were ever active in the pre-FMLIST era. And their number is still growing. So we may be seeing many more active DX-ers in the coming years. That also shows how good FMLIST really is.

Best regards,
Janpeter

36273. FMLIST myFM minor change

Yahoo group: SkywavesDX (2015)
Date: 2015-06-03 09:43:01 UTC
From: Günter Lorenz
Topic: 36273 Message: 36273

I did some performance fine tuning on the myFM table page.
As not everyone who uses this page needs immediate and constant acess to the web streams, I have "experimentally" removed the web stream list from the bottom of the table, so it will not cause unnecessary server load.
If you want to access the stream list, you can either click on the link at the bottom of the table, or on the word "STREAMS..." which is shown in the REMARKS column.
It will open in a separate tab. You can leave this tab open, and when you change frequency or other criteria, just click again on the initial link - and the page in the other tab will refresh.

Any comments welcome.

73,
Günter

36274. RE: [SkywavesDX] FMLIST myFM minor change

Thanks Gunter, that is more convenient.

One can also right□click STREAMS and open in new window. Saves mucking about scrolling up and down too.

Thank you.

All we need is some Es here to try it out with!

One logging in a late evening opening to Portugal in five days here, (end May beginning June) is not really cutting it.

Jim.

> explanation.

Correct. And 30 seconds is two eternities. Way to long.
Just to explain: The FMLIST server is used by FMLIST, FMSCAN, and a number of other websites. Some queries are pretty simple, and are fast also under heavy load.
Other pages aggregate and filter data in a more complex way. They are fast with few users, but slow down when many users access the server.
I have been spending a lot of time to optimize things, creating lean and smart (SQL) code. But - by design - there are complex tasks (most of the FMSCAN stuff) which cannot easily be optimized. We have started preparations to move the server to a newer HW platform, but there are plenty of compatibility issues and I have only limited time to spend on this. I would need an experienced PHP programmer for a few weeks.

> Since I would expect the number of active DX-ers to further increase
> substantially, this will be adding to the problem. And also, May 15 was a good

>
> So my opinion is that some smart solution should be found. Unless the
> FMLIST server capacity can be further extended.

Capacity is one thing - but architectonical measures are smarter and better ... so I like your approach.

> I know that Jürgen Bartels
> has developed StationList. But this is a standalone development, not
> integrated with FMLIST.

Yes and No:
No: StationList is integrated -it gets all required data from FMLIST, and places proper log records into FMLIST.
Yes: It is not integrated from a UI / SW tool point of view.
But I think it serves the purpose!

> In general I would suggest a solution into the
> direction of a download of (part of) the database upon signing in to MyFM.
> The user can then work in this downloaded database on his own computer.
> Upon signing out of MyFM, the loggings will be uploaded to the FMLIST
> server.
> Could something like this work?

Yes, certainly. Especially the first part would be fine, because the biggest "stress" for FMLIST server (and DXers) is the repeated loading of the myFM main page.
I implemented the "Sports" vs "Comfort" option last summer, to optimize performance. And I think there is some room for more "Sports", cutting down some features.
Log posting (upload) should not be a problem - I would prefer it in realtime, but bulk is possible as well.

But let me remind you of other solutions:

Andy Pritchard's RDS Logbook: FMLIST is supporting it since many years, and I have forgotten how it works, perhaps Andy can explain. For sure, it gets data from FMLIST, and puts back logs.

Olivier Guillaume has written software for the Sony XDR - it can post logs, and - as it does not get data from FMLIST - FMLIST will try to find out the transmitter location. Was in use last season.

DF8RY CSVUserlistBrowser: Initially created for WinRadio receivers, works as a standalone tool or can communicate with many SDRs. Gets personalized data files from FMLIST, and can put back logs (at least for MWLIST, the FMLIST interface is easily implemented).

Then, there is good old RDSDX. The Finnish guy has disappeared many years ago with the source code in his orchid garden, but still many users download data files. In every readme.txt that comes with the download, I ask people to send me their RDSDX log files. Guess how many I received? Whatever number you guess, divide it by that number. That will be the correct result.

As you can see, there are a number of offline solutions. FMLIST is open for, and I can only encourage, such offline solutions, where "offline" means that you do not use up internet bandwidth and server capacity to identify a program and a transmitter site. Once that is done, posting a log to the web server is simple, and efficient, sharing your log with the rest of the gang.
Personally, I cannot handle development of a DX logging client - but I am ready to help and support any good tool, like the ones I mentioned above.

A question regarding performance: Assume that page load performance is perfect - how many logs would you post per minute? I'd use this number, multiply by 150 DXers - that gives me a good baseline for a load test on log posting.

73,
Günter

No special event on the server in this time period, not too busy at all.
I use Nagios to continuously monitor CPU, memory, threads, network IO and other details.
Can you run a command prompt with

ping www.fmlist.org -t

This would help to exclude network issues.

73,
Günter

From: ilkka suni
Topic: 36273 Message: 36278

Brilliant! Thanks, Günter.

Up until now, I have been using the Firefox,
avoided the Explorer browser, as with my rather
slow internet connection, the FMLIST pages have
loaded far too slowly, to utilize in rapid Es
moves. I just tried, and the whole site appears
to load much faster now, with the MSIE browser.

Also, the separate tab window is very visual, and handy to use.

Thank you, Günter!

From: John Faulkner, Skegness
Topic: 36282 Message: 36282

https://app.box.com/s/75dh9taxcjcl9vtlgj5bmc6p1bygh642

It sounds Balkan, but the ID doesn't match anything I can see in FM List.

Apologies for the glitchiness - computer problems here meant that the
recording stuttered and I don't know if this has chopped part of the ID.

Thanks

John

36283. Re: [SkywavesDX] FMLIST myFM minor change

Thank you G?nter. It seems like a good idea to move the web streams to a new page.

But .... I have a new problem this morning which I wasn't going to mention for fear of giving you unnecessary 'bad press', but while we are discussing the new features and changes this may be of some use if it highlights a problem which has resulted from these changes.

When I enter the frequency and a PI code, then search, I get an empty result, even though the PI code exists, is correct for the frequency and no filtering has been applied.

This occurred with the majority of my searches during today's Es opening, but improved as the opening began to diminish. A browser issue? I have no idea, but suspect it probably is.

John

From: Günter Lorenz
Topic: 36273 Message: 36286

Hi John,

no bad press, and perhaps not even a browser issue. "Software specialists" are known to break things while fixing others. So I just fixed a bug that I introduced this morning. Please give PI + frequency search another try.

73,
Günter

36287. Startrek reflection

Yahoo group: SkywavesDX (2015)
Date: 2015-06-03 16:25:02 UTC
From: Günter Lorenz
Topic: 36287 Message: 36287

No sporadic E for me today (did not try OIRT band), so I thought I quickly tell you what happened last night.
I was working and had the radio running on 89.3, usually empty channel and a good indicator. It was few minutes past 11 pm local time.
Suddenly, out of the noise, there was the Startrek theme - the intial sequency. Clearly fading like Es. So I pushed the "record" button on HDSDR (I like the fact that it immediately starts recording without asking for a file name) and recorded a few minutes. The signal disappeared and came back a few times. Not very strong, no RDS.
Who could that be? NCC 1701 coming to pick me up?
Based on earlier propagation paths, I picked the web stream of NERIT Trito programa from Greece, and after some hassle with the Flash player and advertising header on their website, there was the wonderful music. Simply: Fascinating!

The RF file is 2 GB (6 MHz bandwidth) - I'll try to find a place to put it, or create a video in the next days.

73,
Günter

36291. AW: AW: [SkywavesDX] Skegness Log: 28-05-15 (Browser Issues)

Yahoo group: SkywavesDX (2015)
Date: 2015-06-03 20:03:38 UTC
From: Günter Lorenz
Topic: 36204 Message: 36291

> I wonder if there is a more suitable browser to run FM List? I used Opera for
> a while and don't recall any problems. Will give this another try.

Not sure. I use FF almost all the time. IE - no, enough MS around. Chrome - no, enough Google around. Safari? No, I prefer other fruit.
Opera? Has its fans and seems a good alternative. There is something that I've been using in the past, and it is worth a try: http://en.wikipedia.org/wiki/SRWare_Iron - sometimes driving off the beaten roads is much more fun.

73,
Günter

36292. OIRT Sporadic E Loggings for 3 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-03 20:25:52 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36292

Hi All,

A similar OIRT Band Es opening compared to yesterday. Except that this opening was even much more persistent.
Like yesterday, the MUF simply refused to reach Band II, very frustrating. How different this was in parts of the UK.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Wednesday 3 June 2015

36293. Unknown Avtoradio frequencies

Yahoo group: SkywavesDX (2015)
Date: 2015-06-03 20:33:43 UTC
From: mvarnhem@...
Topic: 36293 Message: 36293

Today, during the OIRT opening , I heard Avtoradio on the usual 68.00 Mhz frequency.
However, also I heard Avtoradio on 65.96 and 70.05.
Does anybody has an idea which are the locations of these transmitters?
Many thanks,
73
Max van Arnhem
The Netherlands

Hi John,

The stations language are romanian and gypsy. On the record I listened
start of program for Gypsy community.

I have not idea... may be Vocea Evangheliei, but not sur.

regards,
Jozsi from Hungary

Thank you Jozsi.

A mystery.

Many, many stations from the Balkans today. Still checking my recordings
at this late hour.

Best wishes.

John

36297. Es log 3rd June

Yahoo group: SkywavesDX (2015)
Date: 2015-06-04 05:50:41 UTC
From: Jim Smith G0OFE
Topic: 36297 Message: 36297

At last, an opening on Band 2 after 5 more or less blank days. In fact, even 6 metres has been very quiet during that time.

Was on the edge of the opening as others had it much better but still managed to log seven stations in ROU and HNG.

Full logs and map:

http://www.fmlist.org/fm_logmap.php?datum=2015-06-03&omid=2748

==========

Jim, Bournemouth, Dorset. IO90BR.

Elad FDM-S2, Perseus/FM+ and Funcube Dongle SDR Recievers

8-element OP-DES for Band 2, 12-ele ZL Special for 2m, plus wideband vertical.

36298. French & German tropo

Yahoo group: SkywavesDX (2015)
Date: 2015-06-04 05:57:06 UTC
From: nick gilly
Topic: 36298 Message: 36298

French tropo here this morning with a bit of Germany for good measure. So far:

Bourges
Niort
Parthenay
Clermont-Ferrand
Lyon Mont-Pilat
Hornisgrinde

Signals on those are weak. Of course, the usual cross-Channel sites are stronger. Good DX.

Nick, Whitchurch, Hampshire.

Kenwood L-1000T, Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, horizontal Körner 9.2 beam (Antennenland version), Yaesu G-450C rotator

Hi Jurgen,

No, that is not a coincidence.
Good you observed this !
I am using a RTL Dongle and it is the first time I have issues with the RTL Dongle on the OIRT band.
I was always very happy with the Dongle and OIRT (and FM) recordings , but now I am doubting :-(
I checked my recordings and I found that both receptions were on the edge of the recording:
65.96 was heard on a recording with center frequency 66.88 Mhz
70.05 was heard on a recording with center frequency 69.12 Mhz
Thanks for your help to solve this problem !
Max

36301. Utö FM-DX- 24/7-pedition

Yahoo group: SkywavesDX (2015)
Date: 2015-06-04 07:51:24 UTC
From: harriku@...
Topic: 36301 Message: 36301

Hi all,
Traditional Utö FM-DX-pedition (Utö 16) started yesterday evening in a little distant Utö-island in SW Finland.
For the next 10 days 8 FM-DXers are hunting stations 24/7.

You can follow our FM-conditions (ionos/tropos) in Utö FM-DX-blog. It is updated daily:

http://uto-fmdx.blogspot.fi/ http://uto-fmdx.blogspot.fi/

We have 2x Körner 15.11 (H and V) and 6-elements yagi for OIRT. For the first time we have low noise FM Preamp Type 1301 88-230 MHz (Research Communication Ltd / UK) in use and the first impression is good.

We have here all kind SDR-receivers connected to computers - and in all over 20 Sony XDR-receivers with GTK/StationList-features.

The crew wish ionospheric weather to be very cloudy, but stratospheric not... (the start was opposite)

muf108's
Harri

36302. Arabic with ID from last night's ES

Yahoo group: SkywavesDX (2015)
Date: 2015-06-04 08:06:46 UTC
From: Németh Józsi
Topic: 36302 Message: 36302

Hello,

On 88.0 MHz I received this from Middle East last night. At 2:02 and at 3:00 are ID's "Radio Rotana". On this frequency transmitters listed only in Saudi Arabia by FMlist. May be, received I this over 3000 km far?

http://enjoe.ucoz.hu/_ld/3/345_880unid.mp3

Thanks.

Jozsi from Hungary

36307. Re: AW: [SkywavesDX] FMLIST myFM minor change

Yahoo group: SkywavesDX (2015)
Date: 2015-06-04 14:52:54 UTC
From: John Faulkner, Skegness
Topic: 36273 Message: 36307

Hello G?nter.

As promised, I said I would let you know if there were still problems
and there are.

I am still going through yesterday's Es recordings and making loggings.
The same thing happens. I enter frequency and PI code. Search ...
nothing found. Yet the PI code is clearly listed and within the search
parameters.

One other thing regarding adding loggings between 0000-0100: This
problem is largely fixed, but I still have difficulties between 0000 and
0001. I can live with this, but just to let you know the problem is
still there.

Best regards.

John

It's marginal but there have been some weak German signals this evening:

93.0 SWR 2
100.5 WDR 4
101.1 SWR 3
104.3 hr4
105.6 SWR 4 RP

They are coming and going at various times. Good DX.

Nick, Whitchurch, Hampshire.

RDS Logbook allows you to lazy (or after the event) lookup stations using
the FMList database.

Steps:
1. Log the PI, PS and Frequency in RDS Logbook
2. Click on search FMList and it will return a list of possible matches.
3. Pick the one you want
4. When you are ready, upload your logs to FMList.

The help pages are here:
http://www.apritch.myby.co.uk/help/rdslogbook_index.htm

Andy.

[snip]
Andy Pritchard's RDS Logbook: FMLIST is supporting it since many years, and
I have forgotten how it works, perhaps Andy can explain. For sure, it gets
data from FMLIST, and puts back logs.

36312. DX Loggings for 4 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-04 21:11:21 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36312

Hi All,

Todays Es propagation featured one of the most chaotic Band II openings I have ever experienced. Signals were extremely unstable and generally weak.
Add a lot of localized tropo to the mix and the result is an almost unworkable band. Just another day with being too much to the edge of the skip area.

The Band II tropo in the morning hours was a nice surprise.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

If you run the RTL dongle at 2.4 MHz sample rate - what happens? do you get signals at +-2.4 MHz?. It is certainly something I have run into and the severity is dependent on the sample rate chosen.

Basically Software Defined Radios are not the answer to our dreams. Images/aliasing are real issues that have to be dealt with/lived with and how the software is designed can affect what the end result is. For example on HDSDR I see far more spikiness than I do on SDR# with the SDR Play. But having said that - they are powerful tools. On Band 2 with weak signals on the SDR I always check on my analogue tuner to see if the same signal is there - most times the SDR will be a little bit clearer/cleaner - rarely is it a dubious spurious signal.

The first part of the document linked to below may help explain things - like why Band 2 FM appears around 33-47 MHz and in the low 60 MHz range on my SDRPlay. [you can see a big signal at 60.00 and for example 98-60=38.And why these signals can move the opposite way to that expected - or even move at twice or four times the tuning rate.
http://www.sdradio.eu/doc/DgtlRcvrHbk43.pdf http://www.sdradio.eu/doc/DgtlRcvrHbk43.pdf

I'm spending quite a bit of time reading up on the whole background and one thing I've come across is the need for a good bandpass filter. And if I read it correctly it's not just at the RF input to reduce signals that could alias into the range being tuned - but after the sampling has been done (still trying to get my head round it).

I think a simple rule of thumb with the RTL dongle is to use the middle 80% of the sampled bandwidth to avoid aliasing signals caused by wanted frequency times plus or minus the sampling frequency.

I'll probably understand it better in a year or two. The other thing to bear in mind is that we don't have to buy the software - so with SDR# and SDR-Console in particular the software is constantly being improved. HDSDR is still on version 2.70 from Nov 13, 2013 - and 18 months is a long time.
Rgds

You’re getting very confused here between software and hardware. What do you expect with regard to images/aliases with a ten dollar dongle? You’d certainly get a very different experience with properly designed SDR hardware. The RTL dongles were designed to receive very wideband DTV and DAB signals. The Perseus and other SDRs are the answer to many dxers’ dreams – MF dxing has been totally transformed by the Perseus being able to capture the entire band – with no images. Hopefully the Airspy (or successors) will enable image free wideband VHF recordings – however the price of the basic hardware will have to reflect the RF engineering required.

The French station on 94.3 is interesting as I was beamed towards Bosnia (120 degrees) when I received this. I immediately thought "Lebanon" but 6m conditions did not appear to support this path. I thought I would throw this in as it did seem to be coming through with the sporadic E.

I think I just heard every station in Bosnia. It took me two days (not solidly, I hasten to add) to check all the recordings, but I am glad I did. This is taking DXing to extremes though. There are 120 personal firsts in today's log.

Once again, this shows you what can be heard (i.e. what would have been missed using single frequency DXing) with a band 2 SDR receiver with 6 MHz recording capabilities.

Good DX!

John Faulkner
Skegness, Lincolnshire (JO03dd) <3m ASL.
Blog: http://skegnessdx.blogspot.co.uk
YouTube Channel: https://www.youtube.com/user/g1vvp
Vimeo Channel: https://vimeo.com/skegnessdx

Receivers:
Elad FDM-S2 (Meteor Scatter)
Sony XDR-F1HD with Konrad i2c mod. (Tropo/Scatter)

Aerials:
Körner 9.2 @ 5.5 metres agl. QTH is 3 metres asl.
Triax FM3, one metre above the ground as a phasing antenna.
Fringe Electronics 20dB & Labgear 30dB band 2 pre-amps.
HS Publications Antenna Phaser.

Software:
Elad FDM-SW2, SDR Console File Analyser & RDS Spy via VAC.
XDR-GTK v0.3.1 for the Sony XDR-F1HD

Rotator:
Yaesu G-5500 azimuth & elevation rotator, allowing antenna to be vertical, horizontal, etc.

36316. RE: [SkywavesDX] Skegness Log: 03-06-15

Yahoo group: SkywavesDX (2015)
Date: 2015-06-05 10:28:47 UTC
From: Satnipper
Topic: 36315 Message: 36316

I can’t id the FF station but there’s a web site mentioned where you can buy something for the vacations where the price is 86.90 euros (I think). I can’t make out the web site name or the actual product.

Stuart

The French station on 94.3 is interesting as I was beamed towards Bosnia (120 degrees) when I received this. I immediately thought "Lebanon" but 6m conditions did not appear to support this path. I thought I would throw this in as it did seem to be coming through with the sporadic E.

I think I just heard every station in Bosnia. It took me two days (not solidly, I hasten to add) to check all the recordings, but I am glad I did. This is taking DXing to extremes though. There are 120 personal firsts in today's log.

Once again, this shows you what can be heard (i.e. what would have been missed using single frequency DXing) with a band 2 SDR receiver with 6 MHz recording capabilities.

Good DX!

> Basically Software Defined Radios are not the answer to our dreams.

I disagree , the proper purpose built sdrs are great!
my RDR54D1 is awesome!
the perseus is/was a godsend

the thing is with the RTL dongle SDRs is we're in "talking dog"
territory- its not that they make good sdrs thats the reason for their
popularity its that they do it at all!

they were popularised by tinkerers and dabblers, linux types, not
hardened dxers like us
we must view all the positive testimony & hype in that light

maybe a few folks who live in the middle of nowhere will be able to
dx properly on it
and for youngsters its still a great budget intro to sdr
but apart from that

real dxers wanting a budget rx would be better going for a dsp
portable or XDR while they save up for elad/perseus whatever

Dave you're one of the ones who managed to get something of value out
of your dongle
judging by your logs

Thanks Stuart.

The website is misterauto.com, yet it is not a 'proper' website, just a list of websites, so presumably an ex-website.

Perhaps this suggests what I heard might be a recording. All rather strange.

Here we go!!

http://www.mister-auto.com/operations/123/nos-spots-radio.html

Listen to the radio spots and your recording has the second half with the woman mentioning the thousands of offers at “petit prix”

So I would say this is a French station, tropo?

Ah - the website is working now. It wasn't yesterday. It was just a holding page with related ads for car parts.

It could be a French station, i.e. from France. Skyrock from Lille does scatter well on 94.3 but the beam direction was wrong. You're probably right though if there was some enhancement I was unaware of at the time.

Thanks again.

Thank you Józsi.

I have been listening to this station for almost an hour and hear similar jingles. Especially OM "moj radio", but no "maja muzika". No YL jingles so far, as per my recording. I am listening to Hit FM at the moment who also use 93.7, just in case.

I am sure you are correct but I am ruling out other possibilities.

Thank you again and best DX.

John

Just to be clear there are two websites:

http://www.misterauto.com – the holding page with ads

http://www.mister-autos.com – the kosher site

Cheers

Subject: Re: [SkywavesDX] Skegness Log: 03-06-15

Ah - the website is working now. It wasn't yesterday. It was just a holding page with related ads for car parts.

It could be a French station, i.e. from France. Skyrock from Lille does scatter well on 94.3 but the beam direction was wrong. You're probably right though if there was some enhancement I was unaware of at the time.

Thanks again.

John

Here we go!!

http://www.mister-auto.com/operations/123/nos-spots-radio.html

Listen to the radio spots and your recording has the second half with the woman mentioning the thousands of offers at “petit prix”

So I would say this is a French station, tropo?

Thanks Stuart.

The website is misterauto.com, yet it is not a 'proper' website, just a list of websites, so presumably an ex-website.

Perhaps this suggests what I heard might be a recording. All rather strange.

Thank you for these Janpeter.

According to FM List, some of the Balkan transmitters I received on the 3rd are using only a few watts. I wonder if this is accurate? Signals were lower that the bigger transmitters, so I can only guess this is the power of sporadic E. But I wonder if these are running more than they state.

Hi John,

I have no knowledge of the power these stations are actually running. But running more than the licensed power is a widespread disease in many countries. On the other hand, Es can be intense at times.

I just remembered I posted a link on the other group to one of the
Balkan files I recorded from the 3rd.

http://www.mediafire.com/download/w78822d6ijwsfnz/2015-06-03+1303+Balkans.ape

You will need this programme to unzip it http://www.monkeysaudio.com/

Hopefully of interest.

I really must save and upload more of these recordings.

Best DX!

Hi

> re: 96.9/104.1
> its definitely not in Stafford town centre,
> I was at cannock chase 17/5/15 and the mast was looming over us
> I can take pictures of the mast next time i visit the Katyn memorial if that helps

It's clear that Signal 1 on 96.90 originates from the BT tower at Pye Green. But what about about BBC Stoke on 104.10? The Pye Green entry of mb21 http://tx.mb21.co.uk/gallery/gallerypage.php?txid=1366&pageid=140 says: "BBC Radio Stoke's 104.1 service now comes from a site simply known as Stafford, and is on the roof of the County Education building in the town." The information is from 2011.

That council building is in Stafford at SJ923232, and mb21 http://tx.mb21.co.uk/gallery/stafford.php shows some pictures. So did BBC Stoke move away from that building recently? Any information would be appreciated.

36336. Capturing RDS Data from SDR recordings

Yahoo group: SkywavesDX (2015)
Date: 2015-06-06 10:53:35 UTC
From: davebunyan@...
Topic: 36336 Message: 36336

How do you analyse long wav file recordings? This question has been nagging me since I recorded three hours worth of SpE on May 15th with a usable bandwidth of 7.2 MHz. 90 minutes in the morning and 90 minutes in the afternoon. The recording was done with HDSDR and generated a string of files 2048 Mb long. This is what I came up with.

Method 1: playback the whole file block one frequency at a time and look at the RDSSpy log file / raw data stream generated for each frequency. Discounting the strong local stations that 60 channels x 90 minutes for the morning file. Well I worked my way from 87.6 to 93.2 MHz before going on holiday on the 23rd May and on average 4-5 different stations appeared on each frequency. I lost the will to do any more when I returned - even though this method yields extra results if you are listening at the time (eg Gibraltar Radio and Radio Essen)..

Method 2: playback the whole file block and use CSVUserBrowserList to scan through the frequencies and let RDSSpy capture the RDS data. By scanning blocks of 15 frequencies at 4 second intervals it takes 1 minute - so a 90 minute files gets scanned 90 times. The 'clever' bit is to determine what entries in the RDSSpy log belong to which frequency and I'm rather pleased that I've found out how to do this without to much effort. Basically by including a strong local signal in the scan block I can pin-point precisely how long it takes to scan the frequency block produce a lookup table in Excel or OpenOffice and marry up frequency to data - 99.9% reliably. When I say "precisely" I mean to the nearest 0.01 seconds which is done by taking the average interval between the known strong station. It works! I might not recover quite so many stations as Method 1 as it can miss short 'one-offs'- but it is a lot more viable. Meanwhile - can use the analogue tuners to explore the rest of the band or the dongle on the OIRT Band. Useful when both bands are open.

Method 3: download the block to SDR console Data File Analyser and listen around the hour / half-hour for station announcements. Useful for weaker stations. I've yet to apply this to second file block. PM me if you want a copy of the spreadsheet and notes on how to use it.

You can look at my May 15th log here:
http://www.fmlist.org/fm_logmap.php?datum=2015-05-15&omid=2414&band=ALL
http://www.fmlist.org/fm_logmap.php?datum=2015-05-15&omid=2414&band=ALL

It includes reception of Jordan TV - audio and sound on E3. PM me if you want a copy of the spreadsheet and notes on how to use it.

For general monitoring I run SDR Sharp and use Andy Pritchard's RDS Data logger. Beta16 logs every frequency change to a file and I can marry this up with the RDSSpy log using a lookup table - as posted elsewhere. This is about 98% reliable it only 'goes wrong' when the RDS data was only valid for a couple of seconds - but that just needs a quick eyeball of the frequency table to see what was immediately before it. Andy's plug-in does of course capture the RDS Data from SDR♯ - but RDSSpy is more sensitive and gives significantly more valid hits than SDR♯. Although SDR♯ is pretty good (!) - "every little helps".

David

Doh!

The frequency might help:

UNID1 is 93.8 MHz
UNID2 is 94.0 MHz

I was receiving Serbia & Romania at the time.

Andy.

36344. May 28th E skip Log

Yahoo group: SkywavesDX (2015)
Date: 2015-06-06 18:01:19 UTC
From: Paul Logan
Topic: 36344 Message: 36344

Hi all,
well it took over a week, but after slowly going through recordings and adding to what was noted live I have now finished my log for May 28th.
One hell of a day of E skip with about six hours of on - off activity with one of the best openings to Italy I have ever seen, with a Spanish one to match.
As an idea of how good it was I logged nine new stations from Switzerland which is really quite rare from here.
I could have recorded more - but with over 500 stations in the bag - the most I have ever heard / captured in one day - I think that would be rather greedy!
SDR was the Elad S2.
Map and log here: http://www.fmlist.org/fm_logmap.php?datum=2015-05-28&omid=256&band=ALL

Here's what was heard.
Apologies for the glut! Now I have to start on May 27th!

Amazing stuff Paul.

I have been drooling over those German, Swiss and French loggings. Looks like you are finding Italy a lot of fun too.

I have just been reminiscing about old times on the BB site. I'll paste in an adapted version here as it shows you how times have changed.

Tim jokingly made a comment: "no one listens for ID's by ear any more then", which really shows you the state of play these days. He's not wrong. DXing is wildly different compared to 20 or 30 years ago. Valves were still king on some bands and receiver drift was an accepted norm. I used to DX on a Rotel RX202 tuner-amp with an analogue display. I didn't even know exactly which frequency I was tuned to.

Getting today's software to do much of the work for you is frowned upon by many DXers - and I think quite rightly so, _yet it's fascinating to be able to see what you would have otherwise missed_. Perseus was a revelation in the same way. Not once did I ever receive exotic west coast North American DX when I did single frequency DXing from home. I just wasn't on the right frequency at the right time. Within weeks of having a Perseus I had logged several west coasters and other exotic stations. The FDM-S2 has done the same for me already this season with my logging of the Canaries on 90.5. It's extremely unlikely I would have spotted that on my XDR alone as reception was very brief.

I think that modern SDR technology demands that we have a lot of automation.

We are at the beginning of a DXing revolution now!

John

WOW! A truly stunning log Paul, and it just shows the power of modern technology applied to DXing. Who would have guessed that there was a Romanian language station in central Spain? I doubt you would have found that without the Elad. And yes some fantastic reception from southern Germany and Switzerland.
Now how long are we going to have to wait for another day like that? It's been dead for days now (I missed the opening the other day as I was at work) and we're almost into the second week of June. Good DX.

Nick, Whitchurch, Hampshire.

Very nice captures Paul, great logs of Germany & France in particular.

With reference automation, for me it started with the Sony ST-SB920 connected to my PC running RDS Spy giving a better ability to ID stations whose languages I could not identify with its Super PI detector when the full RDS could not be received. I suppose many other DXers started this way as well with automation. Of course I still have to listen out for any IDs, made easier if the station name is in English or has been heard in previous seasons.
One might say that the SDR has gone up a level in regards to automation, but personally it has made DXing more possible thanks to scheduled & live recordings of certain parts of the bands. Great for those of us who are not always at home due to everyday commitments. Also going back on the .wav recordings I have managed to log more stations I would have missed out in the past because I was monitoring another frequency on my analogue tuners.

Oh & this season's E Skip looks like a repeat of 2014 but worse. Even the 11 & 10 metre bands have been flat. Normally it would be buzzing with activity, including SSTV & CW mode HAMs.

Hi Andy.

That 93.8 is Rádió 1 Pécs, which is not a bad catch at 400 watts.

Good DX.

Nick, Whitchurch, Hampshire.

agreed its dreadful
also its even worse up north than it is for you guys down south/East

many of Johns "top of the band" openings produced nothing here, even
11m was dead

its so bad i'm looking forward to going to London so i can tune the pirates

Greetings from Utö-island, SW Finland, Utö16 FM-DX-pedition!

Not much ionospheric Es-traffic yet, but on Thursday evening MALTA 88.7 (Vibe) was nice to pick up with several Sicilians - and LIBYA on 88.8 MHz. All douple-hops. One week still left for some more.

But have a look to Otso Ylönen's XDR-GTK-studio for FM-DXing. Four Sony XDR's combined to one PC.

Very nice setup is presented here in Utö FM-DX-blog:

I heard this with my own ears. Phonetically, I can only give an phonetic example from an English perspective, but Google Translate gives you the audio of "one" spoken with a Hungarian accent.

https://translate.google.co.uk/#en/hu/One

Must remember Google Translate more often. A really useful tool for us DXers!

Jurgen it is mainly aircraft in flight that are received so it doesn't matter how far away you are from an airport, as long as you are on a flight path/flight paths.

I had similar results in Blackpool UK, and when the sky was clear I could see many vapour trails.

"no one listens for ID's by ear any more then ? ;-)"

On the contrary I've picked up a few nice ones from the recordings inc Radio Gibraltar and and Essen recently and I've got to make some recordings to get them ids by more experienced DX-er's. The problem is simply the time it takes. Right now I'm going through and 8MHz sample lasting 1 minute using the RDSDataLogger and RDSSpy combination and I'm listening as I can. But it will take 70 minutes just to go through the file thoroughly. If I did that for a one hour file thats about 80 hours of time to invest - not practical. But if I concentrate on the bits around the hour/half-hour it should increase te chances of voval id on the non-RDS signals.

Hi William,

I am hearing a commercial for Restaurante Los Valencianos. A google search reveales that such a restaurant exists in Lorca, Murcia. I have an entry in my list which gives a Radio Disco in Lorca on 87.7 MHz. Another google search seems to confirm that this tx exists. At least there is a web site.
If you would assume the received PS to be scrambled, and you shift some letters from the first text block to the second and vice versa, you can get at least very close to a correct PS of RADIO___ DISCO___. So I would bet that this is what you received.

73, Janpeter

Hi Tim,
No. Just that one. I guess another channel could have been relaying Inter... The IHTEP logo was very clear in the TR.
Tom.

Hi,

unbeliveable: BBC 2 on 88,5 and 89,2 MHz on FM in East Croatia, hearing the news ... fading, but mostly clear and in stereo, recording on MD.. hahahahhaha with RDS BBC 2...fantastic...

Osijek, East Croatia
tuners Kenwood KT-6040 and 6050.. Gilbert ?Sullivan with Get down is playing, nice retro sound..

Rudolf - Your 89.2 would probably be 89.3 from Holme Moss, Northern England. HM is not so far from Pontop Pike which you heard on 88.5. It could also have been 89.1 from Wrotham, SE England. There are no high power tx in the UK on 89.2
Good dx - Julian

Preview by Yahoo

Particularly interesting is the reception of the French motorway radio network on 107.7. Anyone else who caught France on 107.7?

Hi Bosko.
I wonder if your 'UNID French' on 89.9 is also TSF Jazz as I hear Paris mentioned twice.105.3 sounds like Rire et Chansons to me, listed from Cholet with 1 kW.
Good DX.

Nick, Whitchurch, Hampshire.

Hi All,

And just another one of those handicapped, crappy, low intensity, low MUF and unstable Band II Es openings.
Adding to the misery is the almost total lack of any tropo, despite of a massive high pressure area being nearby almost continuously for the past months.
Todays temperature reached a stunning 14 °C. Apparently we are having a very early autumn season this year.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

From: Jim Smith G0OFE
Topic: 36399 Message: 36399

Hi all,

Janpeter, I feel your pain! It’s been a poor June so far and you’re right about the wx, it has been consistently on the cool side here too with a constant nagging wind leaving me at times unable to crank up the antennas to full height.

I was off work last week, and the second day back at work I (mostly) miss a very good opening by this season’s standards.

Fortunately I am able to “Teamviewer” into my radio PC at home from work, and do a bit of monitoring at lunch time and also set streams recording on the SDRs. Proved valuable today as it meant I didn’t miss out completely on the opening today. Quite strange as it was simultaneously open to Spain and Romania/Hungary.

Inevitably, the opening ended about 1525 – I arrived home from work.at 1528 to a dead band. Standard…..

Still going through the streams, but my loggings so far are at

http://www.fmlist.org/fm_logmap.php?datum=2015-06-09
<http://www.fmlist.org/fm_logmap.php?datum=2015-06-09&omid=2748> &omid=2748

Here’s hoping the improvement in these parts continues.

Jim.

==========

Jim, Bournemouth, Dorset. IO90BR.

Elad FDM-S2, Perseus/FM+ and Funcube Dongle SDR Recievers

8-element OP-DES for Band 2, 12-ele ZL Special for 2m, plus wideband vertical.

Hi Jim,

That is bad luck indeed. Last week was particularly poor.

I have been thinking about monitoring the band from my office location. All hardware and software I have is ready to do this. But I would not have any opportunity to actually pursue this.

The hardest part of all of this is to see so many DX-ers at just 200 km distance getting some or even much DX, while the band at my location is completely dead. This has happened several times this season. And nature has the tendency to repeat itself.

I can only live in hope that some day.....

73, Janpeter

From: nick gilly
Topic: 35847 Message: 36401

Hi Janpeter.
It has been really frustrating for me watching DXers log lots of stations today, including in the UK, only to have everything drop out just before I left for work. This seems to be a hallmark of a poor Band 2 season. In a good season there are plenty of opportunities to catch Es openings in the evenings, so at least I don't feel so left out. In poor seasons such as this one, and 2014, a lot of the better openings when they do happen, occur during the late morning-early afternoon period - when I'm at work during the week. I hope there is a big increase in activity soon, although I'm not going to hold my breath. The temperature only reached about 14C here today as well in a cold and gusty NE wind. What a great start to the 'summer', not.
Good DX.

Nick, Whitchurch, Hampshire.

  Hi All,

And just another one of those handicapped, crappy, low intensity, low MUF and unstable Band II Es openings.
Adding to the misery is the almost total lack of any tropo, despite of a massive high pressure area being nearby almost continuously for the past months.
Todays temperature reached a stunning 14 °C. Apparently we are having a very early autumn season this year.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Hi Nick,

Well, I guess it is good to know Jim and I are not alone in this :-) And at least we can look forward to another giant logbook from John and Paul. Which I really like to go through, especially in case there are a lot of UNIDs.

And for sure, one day it will be our turn.

I agree with your analysis of the propagation behaviour in a poor season. What can be added, although less frequent, are early morning openings that happen in good years. Or even openings in the middle of the night.

73, Janpeter

Onderwerp: Re: [SkywavesDX] Sporadic E Loggings for 9 June 2015

Hi Janpeter.
It has been really frustrating for me watching DXers log lots of stations today, including in the UK, only to have everything drop out just before I left for work. This seems to be a hallmark of a poor Band 2 season. In a good season there are plenty of opportunities to catch Es openings in the evenings, so at least I don't feel so left out. In poor seasons such as this one, and 2014, a lot of the better openings when they do happen, occur during the late morning-early afternoon period - when I'm at work during the week. I hope there is a big increase in activity soon, although I'm not going to hold my breath. The temperature only reached about 14C here today as well in a cold and gusty NE wind. What a great start to the 'summer', not.
Good DX.

Nick, Whitchurch, Hampshire.

Hi All,
And just another one of those handicapped, crappy, low intensity, low MUF and unstable Band II Es openings.
Adding to the misery is the almost total lack of any tropo, despite of a massive high pressure area being nearby almost continuously for the past months.
Todays temperature reached a stunning 14 °C. Apparently we are having a very early autumn

season this year.
Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

From: sequeyo
Topic: 36404 Message: 36404

Hello friends.
Can anybody in South of France help me with this unknow broadcast in french?
https://soundcloud.com/radiobsesion/french-frecuency
Received in 101.0 from North of Spain (Basque Country).
Many thanks

36405. Es 08.06.15. UNID FM stations (French language). Recieved in Ukraine.

36409. RE: [SkywavesDX] Unknow french broadcast

Yahoo group: SkywavesDX (2015)
Date: 2015-06-10 08:00:06 UTC
From: Satnipper
Topic: 36404 Message: 36409

I wonder if this is the religious UNID 101.0 that FMLIST has in Bilbao? It is talking about programmes transmitted in French at 03.00 for people who speak French. It mentions a programme “les autres cosmiques”, and something like www.LaTirerParoles.com <http://www.LaTirerParoles.com> .

Maybe CED can get more out of it?

Regards

Stuart

Hello friends.

Can anybody in South of France help me with this unknow broadcast in french?
https://soundcloud.com/radiobsesion/french-frecuency

Received in 101.0 from North of Spain (Basque Country).

Many thanks

Ok, thanks Ced. Does the man say Radio Congee when he starts to talk?

FWIW I think it is religious, not a French station per se and the “ids” are actually programme names. Voila!

Hi Bosko,

I can confirm that 105.3 is Rire et Chansons (at 0:18 you can hear an ID "...sur Rire et Chansons").

Concerning the two Italian UNIDS, 90.1 is very likely Radio 24 (two txs listed, from Cervo/Capo Cervo and Sanremo/Coldirodi, both in the very western part of Liguria close to the french border).
To be really sure of it, can you confirm the hour of reception?

Unfortunately there is no possibility to identify the one on 89.1: you can hear only national advertising with no bumpers interposed between them.

73's and good dxs,

Franco
Radda in Chianti
Italy

yes it's 100% religious.
The id is send at 2:01 , 2 words compose the name

Hello everybody,

can somebody delete one of the replies I gave to Bosko?

I wrote the first one.... but after 20 minutes I saw that Yahoo haven't published yet this post, so I have been forced to write the second one....
But after 10 minutes more the first post has been published and it's impossibile for a common user to delete or modify his own posts...

I really don't understand why some people likes this old Yahoo stuff.

From: Jozsi Nemeth
Topic: 36420 Message: 36420

Hello,

Yesterday afternoon I got a good E skip from British islands. MUF was about 95 MHz.I had received many BBC's transmitters. That time I received this on 87.5 MHz:
http://enjoe.ucoz.hu/_ld/3/349_875pirat.mp3 - may be a pirate station?

08.06.2015 I received on OIRT band many stations from area Ural mountains. There are 2 unids:
67.8 (or 67.79) MHz http://enjoe.ucoz.hu/_ld/3/346_67_8unid.mp3
68.09 MHz http://enjoe.ucoz.hu/_ld/3/350_68_09u.mp3
same time I received Tatar Radyosu on 67.7 MHz
http://enjoe.ucoz.hu/_ld/3/347_677tatar.mp3

Can anybody help me for identification?
Thanks.

regards,
Jozsi from Hungary

36425. Re: [SkywavesDX] Sporadic E Loggings for 9 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-10 13:15:16 UTC
From: John Faulkner, Skegness
Topic: 35847 Message: 36425

Hi Janpeter, Nick, et al.

I have a lot of recordings to play through from yesterday's Balkan opening. It was a 'mid-season frenzy' of an opening. It's a shame it has taken so long to arrive. The whole band was full of Balkan 'soup' with many low power transmitters.

I am not even half way through the recordings I made while I was at home. Then I had to go out for several hours, and I think the Es continued for another two to three hours, judging by what I heard on the car radio. So it may be some time (a day or more) before I post a log.

You can watch the progress of my log on FM List of course - http://www.fmlist.org/fm_logmap.php?datum=2015-06-09&omid=2149 Hopefully I might have this finished later today, but it may be unlikely.

Any help is appreciated as always Janpeter - I am pleased you enjoy searching for those UNIDs.

Speaking of the weather: At the worst, how about 9C as a high (during showers) and a ground frost at night. Obscene weather for June. So when we reach the mid 20s on Friday it will genuinely feel like a heatwave. Absolutely crazy!

Best DX.

John

Hi John,

there's a Feniks Radio in the serbian language part of BIH (Bosanska Dubica).
Unfortunately the only frequency listed in FMLIST (and also reported in the website) is 94.7.
But, who knows?

Franco

Thank you Franco.

Many UNIDs in yesterday's log. Also some new PI codes and updates for FM List.

Good DX

John

When 90.9 BBC Radio 3 from Belmont gave way to Serbia during yesterday's
Balkan madness I had to grab a recording.

http://www.mediafire.com/download/4j11xeui7d1q498/2015-06-09_1436_Balkans_(Belmont_90.9_Swamped).ape

You'll need Monkey's Audio to decompress the file. www.monkeysaudio.com/

Also HDSDR if you don't have an FDM-S2.
http://www.hdsdr.de/download/HDSDR_install.exe

Good DX!

John

36430. TVDX 1980's style!

HI All,
I have been posting all my old analogue TVDX photos on Flickr and still have quite a few unidentified photos from Es, F2 and tropo reception. To make them quick to find they are the first 25 pics in this set...

https://www.flickr.com/photos/tim_anderson/sets/72157648696156213
https://www.flickr.com/photos/tim_anderson/sets/72157648696156213

If anyone could help identify any of them I would be eternally grateful!

Thanks

Tim, Hastings (ex G0GTF)

36433. Unidentified language during yesterday's Es opening.

Yahoo group: SkywavesDX (2015)
Date: 2015-06-10 19:56:18 UTC
From: John Faulkner, Skegness
Topic: 36433 Message: 36433

These are two recordings of a station I received on 90.4 during yesterday afternoon's frantic Balkan opening. It may even be Balkan, but I don't recognise the unusual language at 1'28".

90.4 unid 1510 & 1522 09-06-15

https://app.box.com/s/4soe62byotkgz03iua32i2wy35lnkwnf

The Balkan opening suddenly gave way to Arabic prayers at 1510 UTC. This faded and reappeared at 1521 with an English song - which may be another station, but at 1522 a male speaker comes in with something I initially thought was Hungarian, but I wondered if it is a more distant language, perhaps from the Middle East.

At this time, there were very good multi-hop E skips between the UK and Oman.

Here's hoping this is something outside Europe.

Thanks

John

Hello Victor.

Coincidentally, I have just been listening to Albania FM, on which I am sure it is also the same man speaking.

I wonder if it is tied in with the Arabic prayer? I guess I will never know.

Thank you Victor.

I have just been informed that the station towards the end of my my recording is Albania FM from Tirane. Whether this is related to the Arabic prayer I have no idea and I am sure I will never know.

I have been told somebody has already replied to my post, but Yahoo is holding it back. Apologies and thanks anyway.

Best DX!

36438. AW: [SkywavesDX] Unidentified language during yesterday's Es opening.

Yahoo group: SkywavesDX (2015)
Date: 2015-06-10 20:43:13 UTC
From: Günter Lorenz (FMLIST)
Topic: 36433 Message: 36438

The language at 01:29 sounds Albanian to me:
http://www.islampress.info/2013/09/26/myftinia-elbasan-behet-pronare-e-radios-albania-fm-90-4/
tells that 90.4 Albania FM has changed ownership to the Mufti(s).
The webpage listed in FMLIST was no longer valid, but they are on Facebook:
https://www.facebook.com/AlbaniaFM90.4
and audio via Tunein http://tunein.com/radio/Albania-FM-904-s192863/ which points to
http://gazetamendimi.com/ (which reveals it is a Muslim channel)
Stream: http://s3.myradiostream.com:9812/;
73,
Günter

Thank you Günter.

(Seems I don't know which group I am replying to now.)

Some of the posts have clearly been delayed or gone astray, but I guess that's Yahoo.

I really thought this was something exotic. How nice of Albania to fool me into thinking this was something more exotic. :O)

Best wishes.

John

36444. Musica Celta from Spain on 89.0mhz

Yahoo group: SkywavesDX (2015)
Date: 2015-06-11 08:27:05 UTC
From: BEAVAN SIMON
Topic: 36444 Message: 36444

Does anybody know which station from Spain on 89mhz may play Celtic music either permanently or as a programme ?

On 09/06 at 14:45 I received a station playing instrumental celtic music with a brief Spanish announcement between tracks. The only bit I could make out was "Favarito.......en canal........Music Celta, Onda Celta"

No RDS made it through, I'm afraid and I can't find any references online.

Thanks

Simon

Yes, sadly Hannu.

It sounded like two IDs in the recording, one suggestion was "Radio Allah" and this sounds correct, but a few seconds before this Nick and I thought we could hear "Oman FM". At the time we did not know there was an Oman FM on 90.4. What are the chances? This was a really BIG coincidence and an extreme let down. I could still be convinced this is Oman FM.

Better luck next time ... maybe.

Good DX.

From: Janpeter van Dijk
Topic: 35847 Message: 36447

Hi All,

The flow of warmer air towards North West Europe resulted in some nice sea path ducting yesterday evening and into the night.
Some pretty strong signals from the UK could be received, as well as some rarely heard low power local stations.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Antennenland.de do a 5 ele aerial that looks suspiciously similar to a Triax FM around the driven element and mast clamp. Price looks good at 29.50 Euros - don't know about shipping. The alternative Antiference id being advertised for £50!

You could always make a 5-ele K6STI yagi - the parts will add up to close on £50 by the time you've paid carriage for the aluminium and the insulators. It has a better f/b ratio and gives a great sense of satisfaction once completed and pulling in the DX.

All of a sudden when you click the radio button for RDS received the pi code / ps no longer appear in Remarks automatically.

Is it broke or a deliberate change? If deliberate - I don't like it!

Hi Mara,

You could try J W Hardy's in Birmingham I bought an FM5 of them last summer, dunno if they have any more in stock but its worth a phone call. This is there website http://jwhardy.co.uk/shop/pages/pl_ant_ter.html

Good luck,
Chris.

There is a change to this, which was under construction/test. It is final now and adds the logged PI/PS (as listed, or as logged, where “as logged” gets precedence) automatically to the remarks when you save the log. If you want to edit the PI/PS before saving, use the fields “PI logged (*)” and “PS logged (*)”. As long as there is no DX, give it a try with your local stations, to see how it works.

Hello, many thanks to all.
After same search on net, i solved the cuestion. It is Radio Santec.
http://www.radio-santec.com/en/
Yesterday on night, i heard 101.0 FM in Spanish and Radio Santec on-line via web and both are the same transmission.
In Bilbao, this 101.0 FM broadcast comes from "Asociacion Religiosa Vida Universal".
Regards,Saludos

John hi, listened their stream (Albania FM) (had to stop after
10minutes..makes me feel ill..not my type of px..at all), Albania FM is
religious station, allah is everywhere and other fairytales, mentioned
maybe in every 10 words, in songs of course too. Fits well to your clip,
that type of "music" they air, and the id at 1:22..".
Albania is indeed a language quite close to my ears like arabic or close..
Nice catch anyways John!

John, the ID we thought was 'Oman FM' is actually 'Albania FM' but it was difficult to hear properly on your recording as it was during a fade and the pronunciation is of course different to English. I heard the same ID many times when listening to their stream yesterday evening.

Next: to check whether they broadcast the Qur'anic prayers that are in the first part of your clip.
Good DX.

Nick, Whitchurch, Hampshire.

You have more enthusiasm than me Nick. I am now assuming that the Quranic prayer was part of Albania FM. But I suppose it might not.

Interesting having the ability to monitor 60 odd frequencies simultaneously as I now hear more of this. During today's Bulgarian opening I heard something exotic mixing with Radio Shumen on 87.6. There was also something very interesting, musically, on 92.2 mixing with an unidentified Balkan.

Thanks Nick.

36466. Video: Different RDS in different RDS Decoders

Yahoo group: SkywavesDX (2015)
Date: 2015-06-11 23:19:08 UTC
From: John Faulkner, Skegness
Topic: 36466 Message: 36466

https://www.youtube.com/watch?v=xHdVDyJYB2c

Noticed this earlier today while playing back the Es recordings from the 9th. This kind of thing isn't unusual either.

I have been uploading a few recent SDR files to Mediafire. You can find the links here: http://skywavesdx.org/viewforum.php?f=65

Good DX!

Hi ive done a tempory fix by finding another rod similiar to the one that broke from one of my older aerials I've had in the past and there is arabic now and again on 87.6.in horizontal mode here in Exeter also there is a massive thunderstorm overcarcasson at the moment so wondering if that is acting as the relay....any thoughts on that...

nice, the last of those is Antopil, Rivne region

i had 77.263.000 short lived but very strong 1718ut
and once again 77.255208 again short strong burst 1735ut
they behaved like double hop but who knows, neither are listed, new
Russian txs in occupied Ukraine?

49.739.370 clean carrier long lasting but later trashed by Lviv mess

93.246 extremely dirty carrier

any ideas?

36479. 3 new stations in today's E's

Yahoo group: SkywavesDX (2015)
Date: 2015-06-12 20:05:41 UTC
From: Fast Logger
Topic: 36479 Message: 36479

Hi

This afternoon's E's revealed 3 new items plus one Unid :

88.9 RDP Monchique, Portugal ID

95.7 RDP Antena1 Lisbon, ID

90.0 Megahits Cra PI 844E rds "megahits"

one unid in Spanish 87.6 "_SEVILLA_" (any takers please ?)

Pat

Beauvais (France)

36480. MethLab R. 92,000 MHz, maybe Sankt Peterburg area (rus) ?

Yahoo group: SkywavesDX (2015)
Date: 2015-06-12 20:12:29 UTC
From: Hannu Piirainen
Topic: 36480 Message: 36480

Moi, any ideas via what station this will come on 92.0 MHz (Leningrad oblast I suppose) or maybe a new tx. MethLab Radio podcasts/SoundCloud d&b jungle mixes all day long today.
Yes, in english occasional ID's, and then continiuous drum'n'bass. UK d&b artist/dj agency this but which station from Rus relays this. Seemed to be H pol. Still going on..

Suomi

36481. Sporadic E Loggings for 12 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-12 20:36:21 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36481

Hi All,

A relatively active sporadic E day today. Even including one hour with a fair Band II opening.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Friday 12 June 2015

Nice logs Janpeter.
I'll post my experience of this opening today here, as I have already mentioned it on the Skywaves bulletin board:
Lots of Spain then Portugal on the car radio coming home from work (earlier on Friday, about 2.15 pm), practically right up to parking outside the house. Get in, turn tuner on, beam south. Dead band.

What else should I have expected from this joke of a season?! That's twice this has happened in the last few days. The Gods of propagation have a sick sense of humour, it seems.
 Good DX.

Nick, Whitchurch, Hampshire.

Hello Pat.
Here is the last update of FM dial
<http://nowsat.info/foro/viewtopic.php?f=6&t=2839&start=10> in Sevilla.
The first in the list is 87.5 Esradio Sevilla RDS: PS: ESRADIO_ / INFO____
/ PUBLI___ / 954_150_ / XXX_____ PI: CAFA PTY: NEWS
Maybe is this one?
Saludos!!

Thank you, my dear friend, yes they're known for a wide variety of RDS displays and it was on my lounge hi fi which is not very accurate in frequency.

Cheers

36485. Re: [SkywavesDX] Re: [FM] Sporadic E Loggings for 12 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-13 07:25:05 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36485

Hi Nick,

This is precisely what I thought of. I was lucky to be at home this time, but those who had to work regular hours were indeed left out again. This being a poor Es season is one thing, but to have those rare openings only on working days and during working hours is a real shame.

Last year was also a poor Es year. Still, July 2014 was better than June 2014 if I am not mistaken. So let's live in hope. Is all I can say.

73, Janpeter

Onderwerp: [SkywavesDX] Re: [FM] Sporadic E Loggings for 12 June 2015

Nice logs Janpeter.

I'll post my experience of this opening today here, as I have already mentioned it on the Skywaves bulletin board:

Lots of Spain then Portugal on the car radio coming home from work (earlier on Friday, about 2.15 pm), practically right up to parking outside the house. Get in, turn tuner on, beam south. Dead band.

What else should I have expected from this joke of a season?! That's twice this has happened in the last few days. The Gods of propagation have a sick sense of humour, it seems.

Good DX.

Nick, Whitchurch, Hampshire.

Hi All,

A relatively active sporadic E day today. Even including one hour with a fair Band II opening.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

36486. Re: [SkywavesDX] 3 new stations in today's E's

Yahoo group: SkywavesDX (2015)
Date: 2015-06-13 07:36:39 UTC
From: Janpeter van Dijk
Topic: 36479 Message: 36486

Saludos,

I am not aware of an esRadio in Sevilla on 87.5 MHz. I think it is on 106.9 MHz. Instead, on 87.5 MHz Cadena Nostalgia from Dos Hermanas is transmitting this PS: CADENA__ NOSTALGIA SEVILLA_ 87.5 FM

So probably it was Nostalgia.

73, Janpeter

Onderwerp: Re: [SkywavesDX] 3 new stations in today's E's

Hello Pat.
Here is the last update of FM dial in Sevilla.
The first in the list is 87.5 Esradio Sevilla RDS: PS: ESRADIO_ / INFO____ / PUBLI___ / 954_150_ / XXX_____ PI: CAFA PTY: NEWS
Maybe is this one?
Saludos!!

2015-06-12 22:05 GMT+02:00 Fast Logger patrice.privat@... [SkywavesDX] < SkywavesDX@yahoogroups.co.uk > :

Hi

This afternoon's E's revealed 3 new items plus one Unid :

88.9 RDP Monchique, Portugal ID

95.7 RDP Antena1 Lisbon, ID

90.0 Megahits Cra PI 844E rds "megahits"

one unid in Spanish 87.6 "_SEVILLA_" (any takers please ?)

A DX signal received via Es in 2011, just 100kHz from a

strong local is resolved and its RDS is decoded.

36494. Perseus FM+ IQ files wanted

Yahoo group: SkywavesDX (2015)
Date: 2015-06-13 23:17:04 UTC
From: pe1etr@...
Topic: 36494 Message: 36494

Hello

Has anyone got any FM+ IQ WAV files from the current (or previous) Es seasons? I want to try and decode RDS in SDR# using the Zoom FFT plugin IF filter.

You can contact me off list if you prefer.

Peter Wilson

No, It can play the file once or play it as a loop. Each file has to be selected manually. The program crashes often when a new file is selected so not perfect.

36506. FMLIST Loggings

Yahoo group: SkywavesDX (2015)
Date: 2015-06-14 12:04:43 UTC
From: Janpeter van Dijk
Topic: 36506 Message: 36506

Once more the logging functionality of FMLIST. Recently some changes have been made, which I like. But a few things go wrong, so maybe Günter can do some further improvements.

In case a station is listed with a 'normal' PI and PS and in addition with a regional PI and PS, the logbook contains a sort of a mix of what has been logged plus the regional PI and/or PS, even if the latter has not been logged.

The other bug is noted this morning for the first time. I had several tropo loggings, none of them with RDS. Despite of this, my logbook lists for several (not all) stations the PS logged.

73, Janpeter

> regional PI and PS, the logbook contains a sort of a mix of what has been
> logged plus the regional PI and/or PS, even if the latter has not been logged.

I think there is a bug: The intention is to copy only the regular PI/PS to the "logged" fields", when the "RDS received? (select "yes" for PS/PI details) " option is set to YES. Currently also the regional PS is copied (but not the regional PI). I'm going to fix this. It is left to the DXer to add a regional PI/PS (if he thinks/knows it is regional), and perhaps empty the other field.

> The other bug is noted this morning for the first time. I had several tropo
> loggings, none of them with RDS. Despite of this, my logbook lists for several
> (not all) stations the PS logged.

This really sounds like a bug and I'll investigate. Note that when you set "RDS received? (select "yes" for PS/PI details) " to YES and then back to NO, this might cause such effect, but I will fix this.

73,
Günter

Thank you Gianni.

I also presumed this must be Tetouan, but you know how it is, sometimes the transmitter name is different. Morocco seem to be re-arranging their frequencies.

36511. UNID from 9th June

Yahoo group: SkywavesDX (2015)
Date: 2015-06-14 12:29:14 UTC
From: Jim Smith G0OFE
Topic: 36511 Message: 36511

Hi all,

Had this during the 9th June opening at 1503 on 89.0Mhz. Here's the clip:

https://app.box.com/s/xcf70u6brsdmoiuq0v8bbvfseyogeczf

It sounds like "Radio Zenit" but there is nothing listed on FM List on that freq.

One suggestion I have been given is that it is definitely Hungarian and is Petofi Radio, but I've listened to the stream for a while and not heard anything similar, so I'm really not sure.

ROU and HNG was coming in at the time.

If anyone is able to shed any light than I would be grateful

Jim.

From: Janpeter van Dijk
Topic: 36506 Message: 36514

Okay, thank you Günter for all the hard work. I did not tick the "RDS received" box this morning, so something apparently is wrong.

If you get this message with an echo, it is because there is a nice Es cloud above my head :-) Which is not a good position for me, but more a courtesy to DX-ers in the UK. Enjoy guys, this is your season, not mine :-(

73, Janpeter

Thanks Janpeter for your feedback!

> In case a station is listed with a 'normal' PI and PS and in addition with a
> regional PI and PS, the logbook contains a sort of a mix of what has been
> logged plus the regional PI and/or PS, even if the latter has not been logged.

I think there is a bug: The intention is to copy only the regular PI/PS to the "logged" fields", when the "RDS received? (select "yes" for PS/PI details) " option is set to YES. Currently also the regional PS is copied (but not the regional PI). I'm going to fix this. It is left to the DXer to add a regional PI/PS (if he thinks/knows it is regional), and perhaps empty the other field.

> The other bug is noted this morning for the first time. I had several tropo
> loggings, none of them with RDS. Despite of this, my logbook lists for several
> (not all) stations the PS logged.

This really sounds like a bug and I'll investigate. Note that when you set "RDS received? (select "yes" for PS/PI details) " to YES and then back to NO, this might cause such effect, but I will fix this.

73,
Günter

Hi all,

Had this during the 9th June opening at 1503 on 89.0Mhz. Here□s the clip:

https://app.box.com/s/xcf70u6brsdmoiuq0v8bbvfseyogeczf

It sounds like □Radio Zenit□ but there is nothing listed on FM List on that
freq.

One suggestion I have been given is that it is definitely Hungarian and is Petofi Radio, but I□ve listened to the stream for a while and not heard anything similar, so I□m really not sure.

ROU and HNG was coming in at the time.

If anyone is able to shed any light than I would be grateful

Jim.

Hi All,

Sporadic E in Europe almost around the clock today, but again a MUF that was shy of reaching Band II.
On the bright side, a nice late evening OIRT opening with some needle bending strong signals. And some tropo that wasn't forecasted.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

I was already having quite a Belarusian day here when this marvelous opening happened.

It was the first time i was able to hear stuff like the National anthem at midnight (their time) and their overnight px

the Belarusian soap operas were so stable, i forgot about dxing and just watched them

You're not wrong Nick. I didn't spot the "Student FM" part as the ID. I was concentrating on the "Radio ...." bit which followed. Definitely Student FM. Crystal clear!

Thank you.

John

36532. PI 7DFF 87.9

Yahoo group: SkywavesDX (2015)
Date: 2015-06-15 17:10:19 UTC
From: John Faulkner, Skegness
Topic: 36532 Message: 36532

Does anybody know who carries the PI 7DFF on 87.9?

I have received this twice recently. Yesterday evening it appeared with the late evening Baltic opening.

Thanks

John

36533. FMLIST UK - question

Yahoo group: SkywavesDX (2015)

From: Günter Lorenz (FMLIST)
Topic: 36533 Message: 36533

Are these station still active?

96.300 Chelsea Football Club EN-GTL Big Blue
I noted it in December 2010 next to the stadium.

87.700 Lune Valley EN-CUM Lune Valley Agility FM
This was reported by Harri in 2014.

Both are not on the latest OFCOM file and I did not find any other source.

73,
Günter

36534. Band II Sporadic E Loggings for 15 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-15 21:09:03 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36534

Hi All,

Today the second Band II opening of the season. It took a long time before thing really took off. With the start of the opening coming solely from Lybia.
This season I have logged more from Lybia than in all 42 previous years combined. Very odd. I am 99% sure that the two LBY stations on 88.3 MHz and 90.1 MHz are from the exact same site with the same power. Their strength, fade-in, fade-out times and fading pattern are identical.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Nice logs Janpeter. And yes, at last a decent evening where the opening, although not particularly intense, was persistent. Mostly Algeria and Tunisia here during this one, although at around 1940 UTC I had an Arabic station with a phone-in on 87.8 which peaked at about 110 deg. No idea who that might have been. Also the presumed unlisted relay of Holy Qu'ran Radio on 105.5 in Tunisia briefly too.
Let's hope for more fun tomorrow!
 Good DX.

Nick, Whitchurch, Hampshire.

From: John Faulkner, Skegness
Topic: 36536 Message: 36542

Thank you Gianni and Reijo.

Definitely 90.5. In a few minutes I will be uploading an SDR file which contains this ID, plus several stations from Thessaloniki.

Good DX!

John

[url]http://www.mediafire.com/download/i6i7qrn27luw46h/2015-06-09_1304_Greece.ape[/url]

You'll need Monkey's Audio to decompress the file.
[url]www.monkeysaudio.com/[/url]

This is a file from the trailing end of the Balkan opening of the 9th.
Conditions ended with a decent opening into Thessaloniki, also including
Halkidiki and Macedonia.

John

Hi Tim

I also noticed the lift to Ireland this afternoon when UCB on 87.6 was present here for about an hour.

Andy.

36552. Arabic speakers needed please

Yahoo group: SkywavesDX (2015)
Date: 2015-06-16 20:13:15 UTC
From: nick gilly
Topic: 36552 Message: 36552

Can anyone help with an unidentified Arabic signal received on 87.8 during E-skip yesterday evening please? It's the talk by an OM and phone call. I'm not sure if the music at the beginning is a different station. The signal(s) peaked at around 110 degrees.

https://app.box.com/s/e63asf4bjq67lczuldbpnd4wjnw52j70
Any help much appreciated.

Thanks and good DX,

Nick, Whitchurch, Hampshire.

36557. Band II Sporadic E Loggings for 16 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-17 09:09:52 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36557

Hi All,

Yesterday clearly was the best day so far this season in terms of Band II Sporadic E propagation. Due to the wide skip area, each frequency had multiple stations fighting to get through. This made RDS decoding difficult. At times, stations from Portugal, Spain, Italy and into Northern Africa came through simultaneously.
The nicest aspect of the opening was intense skip to Sicily Island for a long time. Bringing in some low power local stations.
More of this please!

Have a look at my UNID's. Any help with these will be much appreciated.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Hello Group,

Is it possible to get some info on this log from June, 11 ?
Phone number, and maybe some local Romanian station-
Weak es to ROU and TUR and GRC in the same hour.

73!

Arvid Husdal, Kristiansand NOR

Hi Arvid,

where's the link to the recording?
I'll try to get some informations from this... also if Roumanian is a neolatin language, the differences with the other neolatin languages are really big.

Franco

36561. TVDX 1986 Unidentified OIRT

Yahoo group: SkywavesDX (2015)

Whilst transferring all my old TVDX videos to PC I came across this sequence from 1987 during band 1 Es. Its obviously from an OIRT country and is probably TSS. But from where in the old USSR? The last pic seems to show the outline of the republic/region or oblast with part of a flag in the centre. I have spent a lot of time on the web looking at maps of the USSR and regional flags but can't seem to match to anywhere. My logs and noted offsets from those days have been lost so any help would be much appreciated!

Thanks

Tim, Hastings

36563. RE: [vhfskip] Italian church broadcast.

Yahoo group: SkywavesDX (2015)
Date: 2015-06-17 18:19:38 UTC
From: Satnipper
Topic: 36563 Message: 36563

During the Sp E opening yesterday afternoon/evening to Italian I checked for Italian STLs on Band I. I found:

52.60 Radio Radar, Castel di Casio/Casola (bo)
54.37 Simply Radio (tivoli) (rm)
56.50 MEP Radio Organizzazione (P. Net), Rieti/Frazione Campoforogna (Monte Terminillo) (ri)

http://www.fmlist.org/fm_logmap.php?datum=2015-06-16&omid=2121&band=ALL&target=ALL&rxin=ALL

No sign of the two Jonica Radio outlets or AFN on 48.50.

Stuart

Subject: [vhfskip] Italian church broadcast.

At the height of the Italian Es opening yesterday evening I was using the SDR to watch background noise fluctuate across B2. It was striking how it fell off immediately below 87.5 with an extremely sharp cut off.
Using the XDR as a reference the background noise usually sits around 5dBf on a quiet channel, last night the lower half of B2 was up around 48dBf at times with only local signals and the strongest Es making it through, very few decoded RDS.

One signal I did spot was a mono church broadcast on 86.59, possibly the same one listed as 86.6 on FMlist. Low VHF was less interesting, although the opening produced high MUF the prop stayed quite long so nothing was heard from the 46MHz church broadcast or Aviano AFN on 48.5, assuming they're still on air.

Woman-announcer and clock are usual Soviet Central TV in USSR.
The clock marks the end of broadcasting.

Victor

36565. Es loggings 15th June

Yahoo group: SkywavesDX (2015)
Date: 2015-06-17 19:02:06 UTC
From: Jim Smith G0OFE
Topic: 36565 Message: 36565

At last, an opening that rumbled on through the evening here.

Was underway on my return from work just after 1530, and was still going when I turned in just before 2100.

Mostly around the bottom of the band and was in and out, but did climb the band at times.

Mostly to the Algeria/Tunisia border area, but occasionally to more western parts of ALG and skirting Italy, though nothing was logged there.

Also logged Vibe FM on 88.7 from Malta. Would think most of the footprint was in the central Mediterranean sea

Full log and map here http://www.fmlist.org/fm_logmap.php?dat ... &omid=2748

This is more like it for June!!

A much more active day with the band open for hours for once.

Managed a few loggings remotely before my return home from work.

The main evening opening began with Bulgaria and Croatia, and probably Greece after chatting with Nick Gilly this evening but was unable to verify that at the time, so no Greek loggings.

Then Italy came slamming in to drown everything else out, then opening moved about a bit with Spain, Tunisia, Algeria in at various times.

Visual log and map here: http://www.fmlist.org/fm_logmap.php?dat ... L&rxin=ALL

A couple of images attached to demonstrate how full the band gets with Italy in full cry - one is how the band appears under normal conditions, the other showing "Italian soup" contitions.

(dark blue colours indicate no signal, the bright red is my local 250kw Radio 2 TX.)

Date: 2015-06-18 17:35:29 UTC
From: Jim Smith G0OFE
Topic: 36576 Message: 36576

In case the owner of the website is around on this list.

I am getting a strange error when I try to access ukdx.org website.

I get to the home page easily enough, but any attempt to get any further is met with a message that I am "not authorised to view this page" and on clicking "OK" on the dialog box, I get:

"If you have arrived here after clicking an image link, please click OK to go to the home page, this block has been put in to stop deep linking from cheapskate relocation and holiday websites who are stealing our bandwidth."

I'm obviously not a cheapskate holiday website or anything else, but a genuine radio hobbyist...

I don't know if some sort of filtering software is generating a false positive, or if there is a fault of some sort, or if the website administrator is anti-Sky(!), [my ISP] but I thought I'd flag it.

Anyone else getting this problem?

Cheers

Jim

There is most likely an issue your end then. I suspect your firewall or AV is blocking it. I've never previously visited that site, and I have attached a screenshot of the site as I see it. It's not a local cache.

It is possible for the site owner to block people from accessing the site by IP or domain, and I know of a couple of ham radio sites that do this, to their detriment because you get added to a white list if you contact the site owner to ask permission to see the site. Kind of pointless when a login page would serve them better to restrict access without making them disappear.

It is possible for the site owner to block people from accessing the site by IP or domain, and I know of a couple of ham radio sites that do this, to their detriment because you get added to a white list if you contact the site owner to ask permission to see the site. Kind of pointless when a login page would serve them better to restrict access without making them disappear.

There is most likely an issue your end then. I suspect your firewall or AV is blocking it. I've never previously visited that site, and I have attached a screenshot of the site as I see it. It's not a local cache.

It is possible for the site owner to block people from accessing the site by IP or domain, and I know of a couple of ham radio sites that do this, to their detriment because you get added to a white list if you contact the site owner to ask permission to see the site. Kind of pointless when a login page would serve them better to restrict access without making them disappear.

** Personal 'First' via this mode

The result of playing back three hours worth of FDM-S2 recordings of a sporadic E opening to the Balkan countries. It took over a week to go through this lot. I want to say "Never again!", but I'm sure I will be lured in again or have to record an opening when I am away from the computer. It's a lot of fun, but VERY tiring and actually quite stressful. I had to take my time with this. There are 121 personal firsts in the main log.

As usual, I was looking for my DX 'target' of Turkey. There were moments of excitement when I heard several outlets of what sounded to me like Turkish language on several frequencies, plus Turkish music and programming mentioning Turkey. Of course, who else could it be? Correct. NOT Turkey, but Macedonia, I guess with programming in Turkish. Either that or Macedonian sounds convincingly Turkish to the English ear.

It was nice to hear Macedonia, which was out in force at the back end of the opening. Montenegro was also received on several frequencies. Traditionally, both countries are quite rare here.

I made a few audio and IF recordings this time, the links of which will follow. If you don't have an SDR radio to play back the files, you can download HDSDR, free of charge, which will play these files. This is available from http://www.hdsdr.de/ Direct download http://www.hdsdr.de/download/HDSDR_install.exe

36593. Band II Sporadic E Loggings for 18 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-19 08:10:15 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36593

Hi All,

Intense ionization of the E layer produced a BIG Band II opening yesterday evening. Lasting until well after local midnight, with even by then big signals to the top of the band.
At times crazy situations like Italy interfering with Spain, while with both countries disappearing leaving Algeria at the frequency.
We have had to wait rather long for it, but the season really seems to have kicked-off.

I have again some UNIDs, please take a look.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

36600. Unidentified live prayers on 90.4 18.6.2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-19 15:20:56 UTC
From: nick gilly
Topic: 36600 Message: 36600

Hi all.
Not much to go on but I managed to catch a brief burst of a station on 90.4 MHz during the height of yesterday's big Es opening:
https://app.box.com/s/50bq4pj6wgf4awhvqpl7r2r7ks1kilk8
The signal peaked roughly SE so a bit further along than the Algerians that were also coming in at the time. Could it be an unlisted Libyan? It sounds like a proper live OB rather than the often-heard pre-recorded (and processed) prayer verses that I have heard before. I didn't try Radio Setif's web stream at the time (statistically the most likely candidate) as I find the Algerian streams hit & miss, but would they have prayers like these?
At the time as well as the Es cloud producing very good reception from North Africa and a few Italians there was another even more intense cloud further south and east. I didn't hear anything else similar on 90.4 at any other times.
Any help on this much appreciated.
 Thanks and good DX.

Nick, Whitchurch, Hampshire.

Hi John,

Congratulations with a mind boggling logging list! I bet you will soon retire from your DX life, after having received every FM station in Europe.
Working with these SDR's is almost similar to making local band scans, as if you are making frequent trips to various parts of Europe. Great stuff!

I am pleased to be able to solve some of your UNIDs.

> 92.8 1241 SRB UNID, ? D4BE Rapidly scrolling PS

Radio Dženarika, Čačak/Ljubićko brdo (SRB)

> 96.6 1301 MKD Radio Slobodna Makedonski, Unlisted site ? 4223 and vocal ID

tx Štip/Turtel

> 98.5 1439 ? UNID, ? FFF1 __DIO1__

The full PS is RADIO106, a station in Serbia. The site for this QRG is unknown.

> 99.0 1439 ? UNID, ? FFF1 RADIO1__

Again Radio 106, tx Kosjerić/Grbića glavica (SRB)

> 105.2 1445 ? Nostalgie, ? D012 French Nostalgie jingle and oldies. Presumably the Serbian Radio Nostalgia?

This one is listed in FMLIST, only with a PI of D011. So they have changed the PI, this is from Beograd.

73, Janpeter

36603. Help needed, slogan [RUS]

Thanks a million, Viktor!

By the way, the June 17th opening lasting for
some two hours or so, was very generous for a
whole bunch of Finnish listeners. The year's best
[RUS] opening so far, I believe. MUF climbed all the way to 108.

But in all, this early summer I gather, has been
disappointing for us Finnish DXers. In my FM-DX
since the 70's, one of the lousiest Es seasons so far.

A few decent openings on the OIRT band, yet on
CCIR-FM, highly frustrating silence. The Utö DX
camp, though, seemed to have quite some success,
obviously thanks to the favourable location
giving space on the band, and allowing the use of pre-amps.

Thank you Janpeter.

I will update these tomorrow. I am still catching up and started checking my recordings from the 16th this evening. With conditions like today's I don't think it will be long before I am up-to-date.

You are right about loggings resembling bandscans. I was thinking the same thing. You really wonder if it is now possible to log the majority of stations across Europe. What I expect to see in my loggings is a greater concentration of loggings at the top of the band. Yesterday evening's late Spanish opening revealed many local stations at the of the band so I am really looking forward to checking this. Lots of the Spanish locals up there have strange PI codes.

I don't think the SDR will kill off my interest in band 2 DXing. I will just spread out the recordings over a longer time to relieve the workload. I was three weeks behind with my logs at one point last season. Potentially, things could be slower with the FDM-S2 if the Es become frequent and intense. It's still great fun. It just takes a lot more time now.

Paul - the Perseus was also a slog sometimes but never like this. The thing about Perseus is that I mostly checked only the tops of the hours around sunrise. There was very little checking through recordings at other times. Sunrise is the best period for the more distant transatlantic DX, plus North American stations often only reveal a full local identification at the top of the hour, so searching through those recordings was much simpler. DXing with the FDM-S2 is very different with sporadic E thanks to RDS. /We know this but just for the benefit of other people who don't use a Perseus. /

I will update my logbook soon Janpeter as time permits.

Best DX!

John

36614. RE: [SkywavesDX] Sporadic E clips 28th May - 18th June including a few UNIDs

Yahoo group: SkywavesDX (2015)
Date: 2015-06-20 17:50:19 UTC
From: Satnipper
Topic: 36611 Message: 36614

There’s no ID on the UNID FF. There’s an ad at the beginning for something which costs €4.95 and is it the Macdonald’s or Carrefour jingle. Then goes into a rap song and at the end an Italian station appears.

Stuart

Thanks Gianni & Stuart for the help so far.
Yes I forgot to mention the France Culture on 88.0 when Radio Soummam fades; it's there pretty much all the time. There's probably a few others that may have background scatter on them too. Good DX.

Hi All,

A run of the mill Es opening today, which made a relatively early start. And with a decline at a time when an increase was to be expected. Rather strange.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Hi

a weak sporadic on and off today past 16:00 hours UTC with a few interesting stations :

87.6 Magyar Radio, Gyor in Hungarian RDS=_KOSSUTH_

88.8 Radio Rômania Actualitati in Romanian _RRACTUAL_

89.5 Music FM Budapest in Hungarian, ID // with webstream

105.3 RTL 102.5, various sites in Italy, pop mix in Italian

106.2 Romanian pop station, one of my highest hits on the dial, tentative Europa FM Sibiu.

Still going on at 19:15 UTC with regular pop-ups from Spain and Morocco.

Pat, Beauvais, Picardy

Tuner : Sony ST-SB920

From: nick gilly
Topic: 36632 Message: 36632

Well Radio Setif came in this evening on 90.4 from Algeria and the modulation is very different to the clip I have uploaded. The audio levels are quieter, and it is processed differently, so I think we can rule this one out.
The ID still remains a mystery though.
 Good DX.

  Hi all.
Not much to go on but I managed to catch a brief burst of a station on 90.4 MHz during the height of yesterday's big Es opening:
https://app.box.com/s/50bq4pj6wgf4awhvqpl7r2r7ks1kilk8
The signal peaked roughly SE so a bit further along than the Algerians that were also coming in at the time. Could it be an unlisted Libyan? It sounds like a proper live OB rather than the often-heard pre-recorded (and processed) prayer verses that I have heard

before. I didn't try Radio Setif's web stream at the time (statistically the most likely candidate) as I find the Algerian streams hit & miss, but would they have prayers like these?
At the time as well as the Es cloud producing very good reception from North Africa and a few Italians there was another even more intense cloud further south and east. I didn't hear anything else similar on 90.4 at any other times.
Any help on this much appreciated.
 Thanks and good DX.

Nick, Whitchurch, Hampshire.

From: Günter Lorenz (FMLIST)
Topic: 36634 Message: 36634

As you may know, all logs via FMLIST are also transferred to DXMAPS.
There may be reasons why one would want to opt-out from this.
It is now possible to do so. Just click on the "DXMAPS=ON" box in the upper right corner of the myFM page.
The setting is ON by default after login. When changed, it remains changed until you log out or change it back again.

While I encourage that all logs are sent to DXMAPS, it may be worth to try to temporarily switch OFF during high SpE activity.

73,
Günter

Some lovely clear pictures - someone discussing the history of symbols and talking about the Nazi swastika. The program logo was clear in the top right in Cyrillic characters. which transliterate into T? PERSHIY. The character that does not transliterate was an upside down V rather than a blocky B.

So what language / what station - as it's obviously someone's Channel 1. Offset was 59.2498 - this time I took a video! (smartphones rule OK [https://s.yimg.com/ok/u/assets/img/emoticons/emo1.gif]

Tnx David

Hi David,

I received these pictures from Ukraine on R2 last night. Could this be the originator of your reception?

Some of the pictures show the President of Ukraine.

From: Janpeter van Dijk
Topic: 35847 Message: 36647

Hi All,

A really BIG Band II Es day yesterday. It took long before things took off, but when they did it was intense.
For me the DX-ing came with several hurdles. There was a family visit at the height of the opening, there was Italy making soup of the band for almost two hours. And there was a very busy FMLIST server, which made me decide to continue logging with good old pen and paper. This was the fourth day this year with Lybia making it through to Zoetermeer.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

I've never EVER seen so much activity on R4 & R5 at one time
before (actually for all the disappointments of this season its been
unusually good for R3-R5)

91.74 was a Belarusian not listed on FMlist not //TV1 , lots of ".BY" adverts

91.76 Kyiv w/ Drama px

93.2396 unid, didn't produce audio

93.240885- Zhytomir - personal 1st!

93.25/99.75 TV1, Gomel was in for ages with coverage of patriarch
Kirils visit to Brest then the predictable "countdown to barbarossa"
type history px set to ominous industrial background music

at times this was so strong that spectral lines were visible 93-93.5
and the buzz was interfering with local llangollen 93.3

93.26v/99.76 UNID one of the dirtiest, most unstable tv carriers i've
ever seen in my life! in fact if it wasn't for the fact that it
produced some audio i may have mistaken it for a noise source

the audio wasn't helpful just background music for a tv drama

appreciate any suggestions on the 93.26 "noise generator"

91.7 was Arabic/french talking about Lebanon at 1946ut and i briefly
wondered if it was exotic

a latin language lightly fried in Slavic :-)

apparently, if you are old enough to have studied Latin at school you
will be able to understand the Romanian Newspapers enough to get the
gist of the content

From: franco289@...
Topic: 36559 Message: 36655

Hi Tim,

here where I live, I can receive a Roumanian Television (Realitatea Tv) relayed in a DTT multiplex for Roumanian pepole living here.
Sometimes I try to follow their broadcastings and often I am able to understand the meaning of the news (but the easiest thing to follow is advertising, like for any other language I think....)

Roumanian shares with latin some linguistic structures, but the pronunciation is very different.

Franco

Hi everybody,

in today's Es opening to Greece (between 14:20 and 14:58 utc) , I've receipt on 91.8 a strong signal of a "homemade-style" Radio.
With melodical Greek music and talks but no news, no advertising.

I wasn't able to understand any identification, but I've logged the PI: 1000
Unfortunately there's non stations on 91.8 using this PI.

So, has anybody more information about it?

Thank you in advance,

Franco

This is incredible. Corsica and the Côte d'Azur has just taken over the band and wiped out Tacolneston and Belmont. All other frequencies are either solid DX or mush. Signals are up to S9+50dB!

The usually unshiftable BBC Radio 1 from Belmont on 98.3 is now France Inter from Gap!

Good DX!

Here in Lincoln, I can see Belmont (about 15 Km away). The only clear audio is from Lincs FM 102.2 MHz. All other Belmont FM transmissions are either being received with extreme hiss or completely obliterated. Only Lincs FM is giving RDS.
This is unheard of at this location.

Chris (Lincoln, UK).

Hi Günter. Shortly after you posted that I had an UNID Turkish signal on 87.8 with distorted audio and religious songs with an OM host. I also received it a few days ago. Back then Kurt had suggested it was Bayram FM east of Istanbul but I checked their web stream and it was clearly different. Did you have this one?
I will upload clips once the CD is full. Good DX.

Nick, Whitchurch, Hampshire.

36672. Turkey at last!

Yahoo group: SkywavesDX (2015)
Date: 2015-06-22 19:42:18 UTC
From: John Faulkner, Skegness
Topic: 36672 Message: 36672

It's been a challenge for me since moving here. Finally, I heard a convincing signal from Damla FM, Istanbul, on 87.5 this evening at 1839. This got stronger in the minutes which followed, almost becoming noise free before fading out around 1843. Istanbul is 2534 km from my QTH.

I was surprised to see RDS Spy burst to life when the signal was at its strongest, but this only produced a random PI code. Maybe somebody will be able to dig this out from the SDR file (Peter?) which I am uploading now. I will post a link to this later. It's only 640 MB this time. There were also other bits and pieces at the bottom of the band which may have also been I suspect were also coming from Istanbul.

Here is some audio which I caught in WaveLab. You will hear the web stream cut in at one point to confirm the audio was the same.

https://app.box.com/s/vqfmog95hryt0931oq5xgf4zhx3mkuwf

Good DX!

I don't know if they have done it for the memory of the Roman Empire....but in Rome there is at least 100.000 Roumanian people living there. And more than one milion in the rest of Italy.
It has become largely the most important foreign community in Italy.

That's the reason why we can see one Roumanian channel in our DTT ;)

Hi Franco,

There used to be a station at the Athens airport area with a PI of 1000 and a PS __best__

Nowadays for Athens on 91.8 MHz is listed ERT OPEN (Free Angel 91,8), whatever that may mean. Maybe they are still using the 1000 PI. Was the skip into Athens at the time?

73, Janpeter

Thank you Günter and Janpeter.

Another ID I found on the SDR file, and thanks to Nick for sppotting
this on the phone tonight!!!

https://app.box.com/s/1wmjsi4dk7ni79xcazlogs18lysxcnqb

I believe this is the ID for Sehrin Sesi in Istanbul on 89.4. Could
somebody please confirm?

I must get some individual audio files uploaded as I feel sure there are
other Istanbul stations in there.

Thanks.

John

John hello;), yes maybe it has a new fq at Istanbul, 89,4 MHz (I thougth Radyo Mastika is there but..)? Sehrin Sesi = The port sound from the town of Istanbul, by the sea and nostalgic Turk (with umlaut on u) music their style seems to be. Did not see the lists what they say (always behing in every level so don't trust only for them). One hundred percent TUR Sehrin Sesi (Nostalji).

Ahh that fits the picture:
Romanians go to Rome :-)

I guess the language similarity makes Italy the target for them?

Jurgen

I only faintly remember that car brand. I wasn't aware it was from there.

Just found this:
Romania derives from the Latin romanus, meaning "citizen of Rome"
https://en.wikipedia.org/wiki/Romania#Etymology

Here's more:
https://en.wikipedia.org/wiki/Name_of_Romania

Q:
How are the citizen of Rome called? (in english)
Romanians?

Roman citizens is the English translation.

Thank you Hannu.

I think Radio Mastika used to be on 89.4, from what Nick was telling me. I am not familiar with the Istanbul radio dial but I understand it is a solid band with stations every 200 kHz. I hope they are not all Turkish versions of our Heart network, lol. Or radio Maria! ;O)

Some more recordings coming up.

Thanks

John

36697. Istanbul Stations?

Yahoo group: SkywavesDX (2015)
Date: 2015-06-23 02:13:47 UTC
From: John Faulkner, Skegness
Topic: 36697 Message: 36697

I wondered if anybody was familiar with the band in Istanbul. Kurt perhaps. As the opening to Istanbul this evening produced other stations which appeared simultaneously with Damla FM on 87.5, but they were much weaker.

I have a few recordings. This is not so I can these stations to my log (unless there is some convincing evidence) but out of curiosity, so I know what to look out for again. Common sense says that these were also Istanbul stations. The MUF cut off quite sharply above 89.4 and any DX stations were extremely weak.

Of interest are:

87.9 unid prayer 1943 22-06-15:
https://app.box.com/s/2xk20jtku40nsyrvewz8374ney6nd9bi
88.2 unid classical 1943 22-06-15:
https://app.box.com/s/btypnft8pszbz3cf2j6t1mghe1yv4oqs
88.4 unid talk 1943 22-06-15:
https://app.box.com/s/1wprj4czhvxidzesnz9k5udoos6k0chc
88.6 unid song 1943 12-05-15:
https://app.box.com/s/vqdxp889lm3dmc9othy607rrpshpabpz

I wonder if the classical station on 88.2 is TRT3. They were playing the violin concerto in D Major, Opus 35. I looked on the TRT3 website but the programme schedule was not easy to access. I tried to obtain a podcast but, not understanding Turkish, could not proceed. I think there was an IP restriction which may have prevented listeners outside Turkey from accessing the podcast.

Anyway. Goodnight all!

John

36699. Re: [SkywavesDX] Istanbul Stations?

From: Kurt Zscherp
Topic: 36697 Message: 36699

87.9 is not a prayer but turkish "Sanat Müzik". Mainly played on TRT Nagme, but also TRT 1 Radyo Bir. I guess this was Bursa/Mudanya
88.2 100% TRT 3 Radyo Üc from Istanbul (playing calssical mx or western pop/oldies)
88.4 Lalegül FM from Istanbul (religious). Not 100%
88.6 Istanbul FM (typical music style.

Just arrived in Kusadasi (south of Izmir) and caught my first DX for many years. RTL on 93.3 (PI 7111).
best regards
Kurt (normally in Istanbul)

There are 102 FM stations transmittin from Camlica Hill ! Spacing is 200kHz.
Radyo Mastika on 89.4 changed to Sehrin Sesi Nostalji around mid May. At
the same time the station started on 106.2 instead of RS FM (Rusyanin
Sesi=Voice of Russia), which stopped broadcastng on their frequencies in
Turkey.
best regards from my holiday in Kusadasi
Kurt

36704. Band II Sporadic E Loggings for 22 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-23 09:27:32 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36704

Hi All,

Herewith a big logbook of yesterday's glorious sporadic E day. Which featured E-skip from no less than 22 countries:
Albania
Algeria
Bosnia Herzegovina
Belarus
Bulgaria
Croatia
France
Greece
Hungary
Italy
Latvia
Lithuania
Lybia
Macedonia
Malta
Moldova
Montenegro
Romania
Serbia
Tunesia
Turkey
Spain

Not only the large number of countries added to the fun, getting skip from Malta and Sardinia is always a pleasure. The good part of Sardinia is that it is DX from Italy, but without the large number of stations that would turn the band into DX soup.
Last but not least, this was day number five this year with skip from Lybia! Where on average it is more normal to get five years in a row with nothing from that country.

For the Italian members, please have a try to solve these:
88.2 MHz, Radio Radicale, UNID site
99.7 MHz, Radio Radicale, UNID site

Any other help with the UNIDs will be as always much appreciated.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Thank you very much Kurt.

Yes, TRT 3 on 88.2 made sense, especially with 100kW, it /is/ slightly stronger than the others too. I will include this and Istanbul FM in the log as "presumed", with full credit to yourself too.

So not a lot of room for DXing in Istanbul. True of many major cities today.

Thank you again for listening.

Best wishes.

John

Hi all,

after the end of public radio and tv's monopoly, italian network of transmitters was born and raised in the 70's and 80's without any rule and -above all- without any serious planning.
"Jungle law" was the only regulation and every radio tried to add more power to their installation only to win other radio's competition.

The first tentative af law was approved only in 1990 ("Legge Mammì"), but the only result she reached was to confirm the radio and tv system as it was at that time.
After this law, nothing has really changed for radio in Italy.That's why we have this kind of mess and this absurd waste of energy.
In the case of television, transition to DTT has been the occasion to reform the entire system and I am afraid that only possible reform for FM radio will be the killing of analogic FM and transition to DAB.

We have nothing like Ofcom or Fcc (or also the regulatory offices of nearly every European Countries).

Technical Dept. of Radio Maria has been maybe the most competent between private radios to built his own network. In many cases, they have bought frequencies from small regional radios and also from other small Catholic radios all around Italy.

That's why is so difficult for us, italian dxers, to follow Es openings (hopefully, Cristian Puddu lives in one of the less crowded Fm areas -Sardinia-).

http://www.mediafire.com/download/9eel9wkobc9oi7b/2015-06-22_1843_(Turkey).ape

This is very end of the sporadic E opening. Don't expect big signals,
but you can hear the Turkish signals as they fade away.

This includes the ID from Sehrin Sesi on 89.4 and the back end of the
audio recording I did of Damla FM 87.5.

The classical music on 88.2 is TRT 3, confirmed by Kurt.

For those who have more sensitive RDS capabilities, you might just be
able to catch the PS from Damla FM. It activated RDS Spy here but wasn't
sufficiently strong to produce a correct PI code. Perhaps Peter, you
will be able to resolve this. It will be a good test.

Good DX!

John

36718. The swedish government stopps the expansion of DAB+

Yahoo group: SkywavesDX (2015)
Date: 2015-06-23 20:31:37 UTC
From: Christian Stödberg
Topic: 36718 Message: 36718

From a press release tonight the minister of culture Alice bah Kuhnke says the government stopps the expansion of DAB+ in Sweden.

Too many referral organizations ex. The Swedish Armed Forces, The National Audit Office etc. have been very critical.

Among common people there’s no demand for DAB+ and the FM-net together with web radio works very well.

From a environmental aspect approximate 30 million receivers should then have been subjects for recycling. That’s a huge amount of electronic waste.

The hole article can be read here (in Swedish).

If you’d like I can make a translation into english.

36728. HDSDR IF and AF recordings

Yahoo group: SkywavesDX (2015)
Date: 2015-06-24 07:00:15 UTC
From: pe1etr@...
Topic: 36728 Message: 36728

When I was experimenting with HDSDR the other

day, I discovered that AF recordings made in

HDSDR are at 192kHz sampling rate.(Provided

this bandwidth has been selected for FM).
If played back in VLC and sent via VAC to RDS

Spy, the RDS data can be decoded.

I also made some IF recordings in HDSDR,

which is similar to an IQ recording, but just

covers up to 192kHz, rather than the full RF

IQ recording which can be up to 3.2MHz in an

RTL-SDR, for example.

The advantage during a Sporadic E opening is

that individual frequencies can be recorded,

rather than the whole spectrum which is

probably mainly strong local signals. We all

know how long it takes to go through an IQ

recording :)

IF recordings can be played in HDSDR, or SDR#

(tick "swap I & Q") etc. These recordings

have RDS, stereo etc. and the bandwidth can

be varied and IF filter applied (SDR#).

If you right click the red record button in

HDSDR, you can choose to record RF (full IQ),

IF or AF (or all three). There is also a

scheduler so you could set that to record AF

for the top of the hour +/- 30 seconds for

each unattended hour etc, The centre freq can

be set for each recorded event. AF files are

exactly half the size of an IF file.

HDSDR also has squelch which works on wide

FM, not just the "usual" modes. Click on the

S meter to adjust the squelch. This would

make AF recordings easier to go through.

Here is RFI (Khmer)92.0 MHz Phnom Penh in AF

and IF for you to play with. I'll upload some

more later.

92.0 AF
https://app.box.com/s/kuisy0misfdljal3qvjx8tq4qkfvaocg

92.0 IF

36729. FMLIST --> DXMAPS

Date: 2015-06-24 07:07:04 UTC
From: Günter Lorenz (FMLIST)
Topic: 36729 Message: 36729

There seems to be a problem at DXMAPS (Gabriel EA6VQ has been informed) with the interface.
FMLIST is posting all logs and receives "OK" confirmation, but nothing is displayed on DXMAPS map.

73,
Günter

36730. HDSDR IF and AF (revised)

Yahoo group: SkywavesDX (2015)
Date: 2015-06-24 07:12:34 UTC
From: pe1etr@...
Topic: 36730 Message: 36730

Re-formatted and more links added.

When I was experimenting with HDSDR the other day, I discovered that AF recordings made in HDSDR are at 192kHz sampling rate.(Provided this bandwidth has been selected for FM).
If played back in VLC and sent via VAC to RDS Spy, the RDS data can be decoded.

I also made some IF recordings in HDSDR, which is similar to an IQ recording, but just covers up to 192kHz, rather than the full RF IQ recording which can be up to 3.2MHz in an RTL-SDR, for example.

The advantage during a Sporadic E opening is that individual frequencies can be recorded, rather than the whole spectrum which is probably mainly strong local signals. We all know how long it takes to go through an IQ recording :)

IF recordings can be played in HDSDR, or SDR# (tick "swap I & Q") etc. These recordings have RDS, stereo etc. and the bandwidth can be varied and IF filter applied (SDR#).

If you right click the red record button in HDSDR, you can choose to record RF (full IQ), IF or AF (or all three). There is also a scheduler so you could set that to record AF for the top of the hour +/- 30 seconds for each unattended hour etc, The centre freq can be set for each recorded event. AF files are exactly half the size of an IF file.

HDSDR also has squelch which works on wide FM, not just the "usual" modes. Click on the S meter to adjust the squelch. This would make AF recordings easier to go through.

Here is RFI (Khmer)92.0 MHz Phnom Penh in AF and IF for you to play with. I'll upload some more later.

Hi Guenter,

thank you for your continuous maintenance of Fmlist.
With regard of it, I have a little question and a suggestion.

I've noticed that in this page (Visual logbook, FM propagation maps and statistics
http://www.fmlist.org/fm_logpanel.php?la=en

http://www.fmlist.org/fm_logpanel.php?la=en

Visual logbook, FM propagation maps and statis...

View on www.fmlist.org http://www.fmlist.org/fm_logpanel.php?la=en
Preview by Yahoo

), it's possible only to see only today's logbook (maybe you've done it to increase the speed of Fmlist).
But if I want to visualize previous days log, what I have to do?

COncerning the visualization of logbook, I wonder if it would be possible to list the loggings "the last on top" without having to scroll until the end of the page.

Thank you in advance,

Franco

Hello Tim and any other RDR54 owners (or RDR50)

What is the actual bandwidth on WFM of these Receivers? Can IQ or IF be recorded? Anyone got any sample files? Are they playable in HDSDR etc?

only about 48khz,
not much by perseus standards but not useless by any means

I did make some recordings but i bet they haven't got the frequency
stamped on them

I'm searching my old 4 shared account for files

i forget what software i used but it stopped working after a Micros**t update

i should try again with this new-ish laptop

same story with my Alinco DJ-X11e-
I think Gunter tested my alinco iq files but couldn't open them

i need to start testing this again

OK Tim thanks.

It mentions a bw of 160kHz in the manual.

I remember trying your KGSDR Alinco DJ-X11 files. They had bad distortion as I think you were trying to use narrow FM with wide FM OIRT FM signals.

I've been thinking about getting a DJ-X11. I can't find exactly what the IQ output bandwidth is for the X-11. Some guestimates of 80-90 kHz are around but no direct evidence. Any ideas? The X-11 works with HDSDR via an ExtIO plugin so no need to use KGSDR any more.

Peter.

PS If you find the files for the RDR54 or X11 let me know!

36747. Re: [SkywavesDX] Burkhard Reuter RDR54 (attention Tim)

From: Tim Bucknall
Topic: 36744 Message: 36747

in case I misunderstood your question
in standalone mode without a pc
the BR RDR54D1 has 6 WFM bandwidth 50s 50HQ, 80s, 80HQ, 120s, 120HQ,
240s, 240HQ and 4 NFM filters which are more useful for FMBC DXing
than you might suppose
5khz,7khz,10khz,14khz

if i was going to be really picky.. it would nice to have something
between 15 &30khz
available on the unit without having to use external pc + sdr software
but thats a minor quibble

in SSB mode B/W is already infinitely variable on the unit without
external sdr software

its all coming back to me now, i used KG-SDR b/c it was designed for
the Alinco DJ-X11e
but Gunter couldn't play it back with the better programmes prefered by dxers

thanks for the Nudge, i'll put "test Alinco & RDR with HDSDR" on the
to do list :-)

I really thought there would be more interest in the alinco from mw
circle etc, they have been known to go loopy over much lesser
"ultralite" rxs
I wrote a letter and sent test files in response to a request for
responses on SDRs and they never acknowledged it

maybe they just assumed all scanners are rubbish on MW

the alinco I/Q bandwidth wouldn't be wide enough for FM dxing but it
was great on MW
I inductively coupled it to a tuneable loop. when you listened to with
the KG-SDR software it sounded like a much more expensive rx, there
was no overload, no wierd hets etc

aaah!
d'oh!
I was recording from the RDR's IF output as it was easily accessible
and i had the correct cables :D hence limited B/W

re: Alinco, I can recommend it as a scanner apart from its SDR features
Its got the most robust front end of any scanner i've ever had
and i've had a few!
it beats the Yupi 9000 & 3300 and the Icom R3

Thanks for the HDSDR io info

don't suppose anyone saved any of my Alinco files centered on 1440 ?
i will make more as soon as i get the chance anyway

No Tim, I didn't mean WFM IF bandwidths. I was asking if it can do IQ recordings similar to a computer based SDRs. For example the Perseus can record 2 MHz and the Elad FDM-S2 can record 6 MHz.

48kHz isn't much good for wide FM.

Just to clarify I meant HDSDR can control the Alinco DJ-X11 with the correct ERW-8 cable cable (or clone).

All SDR apps can demodulate a sound card IQ input.

I look forward to your files.

Peter

Drat ! My pivot table on the downloaded FMList only shows 10995 stations - where are the rest.

Seriously though - especially with R Maria as some other - when you get 20 or more stations on the same frequency and there is short hop (c 900-1100 km), medium hop (1200-1600km) andlong hop (>1600 km), and the identifiable stations cover a 30 deg wide arc, and the conditions are rapidly changing, AND some of the identifiable stations are 2-500 Watts - how can you even attempt to guess the transmitter site. Foolish me when I first started this hobby thinking it had to be the strong station.

At least one good thing (at the moment!) If you get pi code 5100 on 102700 or 5158 on 103200 - it has to be San Marino - which only has these two stations. (According to FM List)

David

Peter, why don't you use freerun?
TVsharp allows it and the picture position should be much calmer.

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el, UHF:48-el
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.

Hello Nick.
102.1 spanish sports is Radio Marca:
http://www.marca.com/radio/marcador.html#
If you go to "21 de Junio de 2015" the podcast "*(Parte 11)* 21:00 -
Duración: 30:00"
In your sample at 00:41 and from podcast at 00:55, both are the same audio.
They are talking about "La UD Las Palmas", they are back in the first
division after a 14 year absence.
The only one Radio Marca frecuency 102.1 is Illes Balears (Palma):
http://fmscan.org/mi.php?i=8140240
I hope this helps you.
Regards

Thanks very much Sequeyo.That fits in nicely with the reception from Algeria at the same time, as it's on the same path.
 Good DX.

Nick, Whitchurch, Hampshire.

  Hello Nick.
102.1 spanish sports is Radio Marca:
http://www.marca.com/radio/marcador.html#
If you go to "21 de Junio de 2015" the podcast "(Parte 11)21:00 - Duración: 30:00"
In your sample at 00:41 and from podcast at 00:55, both are the same audio.
They are talking about "La UD Las Palmas", they are back in the first division after a 14 year absence.
The only one Radio Marca frecuency 102.1 is Illes Balears (Palma):
http://fmscan.org/mi.php?i=8140240
I hope this helps you.
Regards

Italy appeared briefly on 88,2 together with NRK P1.

Mostly tropo here tonight from Norway and Denmark

36777. Sporadic E Loggings for 25 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-06-25 22:03:02 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36777

Hi All,

A late start to the Sporadic E DX turned into a very persistent opening. Even as I write this at local midnight, Band I is still full of DX. This may bode well for tomorrow.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Thursday 25 June 2015

You need to download the plugin, and add it to SDR#..

Here is the link:

http://www.rtl-sdr.ru/page/no-title-2 http://www.rtl-sdr.ru/page/no-title-2

The site is in Russian but you can use google translate.

Peter

From: nick gilly
Topic: 36784 Message: 36784

I see this is still listed as inactive in FMLIST. Well it appears to be back on as I was receiving it last night and still am this morning on 94.0, presumably due to the tropo. This is the first time I've heard it here (I think) so I wonder if the site has been improved or power increased? Good DX.

Nick, Whitchurch, Hampshire.

36793. Thank you, FMLIST!

Yahoo group: SkywavesDX (2015)
Date: 2015-06-26 18:03:07 UTC
From: ilkka suni
Topic: 36793 Message: 36793

A big thank you, Günter and the whole FMLIST workgroup! As I am listening with a 25-year-old non-RDS tuner, I can only thank you guys, and the aid the FMLIST provides, for my results today.

Why this junkyard equipment? It's the 30 kW transmitter some 3 kilometres away. And, today I tried IF 80//110 kHz filters, instead of my usual 53//80 kHz. Proved out to be too wide a combo for this location and the numerous transmitter sites within a 50 km range.

73, ilkka
[ISjoutseno]

P.S: If any of the Skywaves subscribers had extra, healthy 10.7 MHz filters, 80 kHz and narrower, I could buy some. Them narrow filters are hard to find around here, nowadatys.

36794. Disco Radio 87.9 - Madrid pirate?

Date: 2015-06-26 20:48:31 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36795

Hi All,

Es propagation is really in a good shape. Today featured two Band II highlights. A very nice opening into the greater Leningrad area of Russia and an intens opening to the Northwest tip of Spain. Both to the top of the band. The Spain opening went on and off like a light was switched. Fascinating stuff!
Other than that, the long duration of the E skip is remarkable.
Countries received today are:
Belarus
Estonia
Finland
Hungary
Moldova
Morocco
Poland
Portugal
Romania
Russia
Spain
Turkey
Ukraine

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Hi Chris,

This is Biznes FM, Moskva. At around 2.00 you can hear the ID.

73, Janpeter

Yes some excellent Es from Spain and Morocco this evening. A couple of Scandinavian logs too. Oh, and I had the Azores on 88.9 this afternoon for the first time ever.
I thought it had gone dead but I just had about 10 minutes of weak Es to Italy at the bottom of the band, although they have gone for now.
 Good DX.

From: Paul
Topic: 36803 Message: 36803

I find it odd that nobody appears to have bothered looking for or reporting any auroral DX considering the amount of solar activity this week.

I would have thought someone would have noticed something considering the equipment some of you have.

Is it because everybody is too focussed on SpE and tropo DX to the exclusion of everyone else?

Paul

Hi Paul,

I CAN ONLY speak for myself.

My QTH in SE Finland is located some 800 km//500 mi south of the
Polar Circle. So being, I live relatively "close" to the Aurora
Borealis belt, having reasonably good position for monitoring Aurora
propagation.

I suppose, the latest big bang a few days ago, did not produce that
remarkable conditions
http://www.fmlist.org/fm_logmap.php?datum=2015-06-23&hours=0&band=Aurora&rxin=ALL

On the 6 mb i.e. 50 MHz, I noticed some Au-based logging ham operator
activity in Finland, Norway and Sweden, yet I suppose the propagation
conditions were not that extraordinary.
.

ON THE OTHER hand, you must be somewhat right, with the Es aspect.
For the night-time Aurora, people are too exhausted after the daytime
Es hunting, to stay awake for the radio.

But what about your location and your potential for Au, AuEs
monitoring? I reckon, you don't live that far from the busiest
geomagnetic activity, either.

Hope your winter is fine.

From: nick gilly
Topic: 36807 Message: 36807

Hi all.
Can anyone shed any light on this station received on 90.3 during an opening to eastern Spain/Algeria please?:
https://app.box.com/s/152r5mz82242290nyrnfteebn7f1ovwp There was no RDS so I was wondering if it was an unlisted Algerian. Hopefully the speech in the clip (live concert) might give us some clues. The opera station in the background is semi-local BBC Radio 3.

Thanks and good DX.

Nick, Whitchurch, Hampshire.

87,9 Madrid. There are a Paraguayan station called "Espy FM", with latin music and advs for latin community resident in Madrid. They have been on air for a year PI code was EC77..87,9 Hit FM Torrelaguna (or San Sebastian de los Reyes), 40 km North Madrid.
87,9 Vaugham Radio left this frequency some years ago.

Topic: 36803 Message: 36810

Well I am mostly bothering to concentrate my DX time on sporadic E.
There has been tropo, but I have ignored a lot of it, because some of us
have less time to DX. I am lucky to have an FDM-S2 and so I had to
record DX on many occasions. I will analyse the recordings ... when I
can be bothered.

As for auroral DX? None whatsoever here and nothing visible. Yes I have
been looking. Hopefully that answers your question.

Today saw the biggest Es opening so far this season. Spain was in full swing by 1100. There were smatterings of Portugal and Morocco at this time and a few brief appearances of Algeria, Tunisia, Greece and Bulgaria, but it was the intense Italian opening, which kicked in at 1700, setting today aside from the relatively dismal season we have had so far. Initially, conditions were finely tuned to two areas in the south of the country, centering around Campania/Basilicata and Sicilia/Calabria. Once the Napoli and Roma areas kicked in there were very good signals across the whole band and it became difficult to determine the transmitter sites, plus we had the effect of the RDS not forming easily due to the onslaught. Even PI codes struggled, despite very good signals. But it was a very welcome opening.

In total, 397 stations were logged from 11 countries. This is my second largest logbook and there are 120 personal firsts.

Algeria
Bulgaria
Vatican City
Spain
France
Gibraltar
Greece
Italy
Morocco
Portugal
Tunisia

Checking the recordings and compiling this log took ten days. At this rate I'll be checking July's openings at Christmas! There's no question that I have spent far too long on radio and less time on domestic matters recently so a reversal of priorities is underway.

At its peak, all the frequencies from my strongest local transmitters, Belmont, Tacolneston and Peterborough, disappeared and the band turned to mush. I noticed that 94.9 BBC Radio Lincolnshire in particular just didn't exist for several minutes at a time. With openings like this, you realise just how overwhelmingly strong sporadic E signals can get. Even flea powered transmitters from more than 1000 km are suddenly capable of knocking out your local transmitter. My examples are not the best either - I heard from other DXers who live closer to higher powered transmitting stations, and they too reported that these giants had fallen under the weight of the intense Es.

Using a 6 MHz SDR receiver really lets you see how the skip path moves around, making transmitter identification much easier. It wouldn't have been possible to identify most of these had I been DXing 'single-frequency' and, as Janpeter correctly states, it's as if you are

conducting a bandscan in that locality. Nothing gets past you!

I find myself questioning whether I really need to log so many stations, but if I don't, then Ait isn't so easy to calculate the Es path and all the transmitter sites.

I made too many recordings and so I decided to play back one file every five to ten minutes as I (incorrectly) thought that the conditions wouldn't have moved around much in such a short space of time. Plus I would have needed more time were I to check every recording. However, out of curiosity, I did play back one or two random files after I had compiled the log, just to see if anything different had appeared. It had. New stations were still appearing out of nowhere, even if just for five or ten seconds.

Quite a few stations I logged revealed different PI codes or slightly different PS names to those which appear in FM List. Particularly the Spanish stations.

I only included the PI code in some of the loggings, but the full PS m=may have appeared after this, I'm sorry to say but I don't always have the appetite to go back and add the PS name, unless it is of interest. SDR DXing on band 2 is great fun, but challenging. This was quite a frantic DX session and I'm sure there will be bigger openings than this in the weeks ahead. Hopefully I haven't made too many mistakes, but please don't be afraid to point any out if I have. I go into 'auto-mode' at times with this method of DXing. I can't rule out my brain cell collapsing under the weight of all this. It's intense!

Good DX!

Hello Reijo.

This wasn't France. I suspect it was Spanish, based on the conditions, and the vocal intonation sounded Spanish, as opposed to Portuguese or Italian.

Conditions at the time were focused on Murcia and Valencia.

Thanks

John

This does seem likely, however, with the conditions being centred on south-eastern Spain I would wonder if Sevilla would be there too. I don't see any other evidence. It could have just appeared briefly and disappeared. Definitely seems likely at first glance, but the slight uncertainty makes me think I should leave it out this time.

Thank you again, very much appreciated.

John

From: BEAVAN SIMON
Topic: 36818 Message: 36818

I'm going through my recordings friom last week and have a Spanish station on 102.1mhz with lots of mentions of Valencia (this area was coming through at the time), also I heard "Radio Padre Santo del cielo".

There appears to be station called Radio Mejora tu Vida in Valencia on 102.1 (but not on FM List).

Does anybody know if this has a PI of E241 ? Or any idea what else it is ?

Thanks

Simon

36821. ULDXing Custom Hard Case

Yahoo group: SkywavesDX (2015)
Date: 2015-06-28 08:56:27 UTC
From: tanger32au@...
Topic: 36821 Message: 36821

Some people who have known me for a while sometimes call me “the bag / case man”. This all started in 2006 when I purchased my first “Pelican” brand case, this was a 1450 which I used to store my radio scanners. Over the years as I moved on to amateur radio and then photography my “problem” with bags / cases only got worse.

Since being lucky enough to have Gary DeBock send me a 7.5” Loopstick Tecsun PL-380, I have been looking for a way to carry this and my other ultralight related radio and items. I have used a variety of bags and cases including a couple I have published the details of on my blog.

A well known saying is “cables only come in two lengths, too long and too short”; I have found the same to be true with bags and cases, they are either too big or too small. In regards to my own experiences with finding a suitable bag or case for my PL-380 I have approached this from two different angles, either something small enough to just carry the PL-380 or something much larger which will carry this and also my accessories and bits and pieces. The first option fits in well with the “ultralight” part of the hobby but means carrying another case for my accessories. The second option of a larger case is much harder to carry; I have tried both and have not been 100% happy with either option.

Recently I found a suitable “medium” size case online; this was a Pelican brand case. The problem was that it had a three month wait time as none were in stock. Based on this I set about finding another case of a suitable size. Jaycar sell the ABS Instrument Case MPV2, this is slightly larger than the Pelican case I was looking at (Internal: 300(W) x 218(D) x 105(H)mm, External: 305(W) x 228(D) x 115(H)mm) but still small enough. The problem I have found with these cases is that the foam is not great, after some use it breaks down and does not do a good job of holding items in place. My local Jaycar had one of the MP2 cases in stock but with the middle foam sections missing, given my plans this was not an issue and as such I was able to purchase this case at a discounted price.

My plan was to reuse the hard foam blocks out of my current case, add a divider and some padding to the bottom and end up with a custom case which fits everything I want to carry without it being too large. Over the past few nights I have worked on this, first getting the side where my two radios are to be stored and then adding the divider between the two sections, this is a piece of pine wrapped in bubble wrap and then screwed to the front and rear plus from the bottom, the case is still “water resistant” but I would not risk fully submerging it in water, it will easily handle anything I can throw at it.

Overall I am very pleased with how well this case has come out, I am able to carry and store all my ultralight radios and related accessories in one case, the customised inside holds everything perfectly in place. While this case was designed for ultralight dxing the same ideas could be used for amateur radio, radio scanning or any other storage need.

Photos can be seen here ->

Yes Simon, Radio Mejora Tu Vida is active from Valencia on 102.1 MHz and has the E241 PI.

Good catch!

Onderwerp: [SkywavesDX] PI E241 on 102.1mhz

I'm going through my recordings friom last week and have a Spanish station on 102.1mhz with lots of mentions of Valencia (this area was coming through at the time), also I heard "Radio Padre Santo del cielo".

There appears to be station called Radio Mejora tu Vida in Valencia on 102.1 (but not on FM List).

Does anybody know if this has a PI of E241 ? Or any idea what else it is ?

Thanks

Simon

Thanks very much for that Janpeter. It was soon overtaken by Muy Buena FM, another new one for me. After a slow start to the season the past week or so has left been a great improvement.

Simon

Thanks very much Victor! I thought you'd be able to help with these.
104.3 is interesting as this was during the big lift on the evening of the 21st when conditions were open to the south and east simultaneously. That is quite a wide area, from Algeria in the south to Belarus to the ENE!

Good DX.

36844. FMLIST UK question

Yahoo group: SkywavesDX (2015)
Date: 2015-06-28 22:51:12 UTC
From: Günter Lorenz (FMLIST)
Topic: 35165 Message: 36844

There is a notification in FMLIST about a possible change of PS for BBY Cymru:

96,80 BBC Radio Cymru
RDS: [BBCCymru] instead of [BBCymru.] on 09/06/15 - may affect the entire network?

Can our FMLIST UK editors/Skywaves members please verify this?

73,
Günter

36851. Maritima - Frequency Changes?

Yahoo group: SkywavesDX (2015)
Date: 2015-06-29 11:48:14 UTC
From: John Faulkner, Skegness
Topic: 36851 Message: 36851

Not sure how up-to-date this is, but the frequencies for Maritima are listed thus:

http://www.frequence-radio.com/frequence-MARITIMA.html

I only discovered this as I am going through my recordings from the 18th and found an unlisted Maritima on 93.6. I couldn't find the frequencies on their website but found the above link which states 93.6 is from Martigues. Martigues is listed on 87.9 in FM List so presume a frequency change. The PI/PS look the same: F436 and (partial) PS __RITIMA.

This site also lists an outlet from Sausset-les-Pins on 87.9, not on FM List. Hopefully useful info.

Regards.

John

As usual, Windows (or something) is trying to get the better of me. Martigues is now listed on 93.6 in FM List. It wasn't there a few minutes ago. It's also still listed on 87.6 though. Maybe somebody is updating the list as I type.

Yes Pedro it really is possible ;-)
Here's some clips recorded from yesterday morning's superb ducting down to the south of France and parts of Spain. Perpignan is my first 'Mediterranean tropo' log:
99.6 RNE Radio 3 O Paramo 1045 km: https://app.box.com/s/lml119zfl7v5h8ymxjqqgr9m0h90kuo0
104.7 Sud Radio Carcassonne 914 km (pt 1):
https://app.box.com/s/5id7s4phn8kxdiwgn3g3xbi4xtmi81d7
90.9 France Musique Carcassonne 914 km:
https://app.box.com/s/2hbhwalc8mdqasam4ud9i3vn2u03s25f
88.3 France Inter Carcassonne 914 km:
https://app.box.com/s/7x6t68btncr2tbkn3fp9bzlfbhc9i3hm
96.5 France Culture Carcassonne 914 km:
https://app.box.com/s/kvah7jt24ad1og4pt3nxnphupdmrqr24
104.7 Sud Radio Carcassonne 914 km (pt 2):
https://app.box.com/s/n7g2m40rcznumnomnrs86fusx8ezyrd0
99.8 France Culture Perpignan 1025 km (pt 1):
https://app.box.com/s/21mawo61hfsvznmkid1aa8q6ojyob2eg
87.9 France Inter Toulouse/Pic du Midi 929 km:
https://app.box.com/s/ruea4un5yfh6m0otjokq8nmqzg7z5mnu
87.7 Euskadi Irratia Azkoitia 901 km:
https://app.box.com/s/z3109fcivqj1zybtdtnhfbkyt0f2ovod
102.0 Sud Radio Toulouse/Pic du Midi 929 km:
https://app.box.com/s/vnlep81wbz9dvcp2elyjd69c5rg31ol0
99.8 France Culture Perpignan 1025 km (pt 2):
https://app.box.com/s/a0k2mn214khb9fl5olbfm0jqik5erpdf
97.2 France Musique Perpignan 1025 km:
https://app.box.com/s/uu354ellvhifnp4a61duaetadje29n3x
95.7 France Culture Toulouse/Pic du Midi 929 km:
https://app.box.com/s/zt7yjvvauvi48wtpnbv9d4z1d2t93brp
By the time of the last recording (probably around 11.20 am local) it was raining.

Good DX.

Interesting Tim. I wonder if Voice Of Africa Radio have increased their power since coming back on as it has become a regular here. I also had a London pirate on 108.0 last week during a lift but that one was playing house music. The PS name of that one was 'DEVOTION' so it must be something different to the one you had.
 Good DX.

From: John Faulkner, Skegness
Topic: 36861 Message: 36869

The Suffolk DXpeditions used to produce scatter to northern Sardinia. This has been witnessed on three separate occasions. At the time we didn't know which part of Italy this would be but, retrospectively, the reception (88.8, 95.3 & 96.5) would have tied in with Sassari and Tempo Pausania. The information is documented so I can provide a little more info, but these are the basic facts. Distances would have been around 1400 km. No concrete loggings were ever made as we never managed to get any IDs.

Thank you again Janpeter.

Not much help? You are a *great* help as always!

I have almost finished my log for the 18th but I am keeping 'unid's to a minimum now, unless they arouse my curiosity for a particular reason. There are too many.

Congratulations on your fine logs too, although I am still to catch up with some of them. I note your comments with great interest. The season really kicked off on the 18th. I wonder what might be in my recordings from the 22nd and 23rd. Hopefully something specific as opposed to countless multi-tx. I am expecting to find difficulty in nailing down the sites for those Italians due to the bombardment of strong signals. My XDR-F1HD was overloading with band 2 Italian stations appearing across the OIRT band. !

Our nationwide network BBC Radio 2 mentioned the Italian reception. From what I remember, DJ Simon Mayo commented that some of his listeners might have been choosing to listen to the Italian radio stations instead of his show. :O) I was!

Best DX!

John

Hi John,

Thank you for your kind words. It gives me great pleasure to try solving UNIDs. As far as that is concerned, please send all that you are able to find, even if there are many. Maybe not now in the middle of the season, but later when things have quieted down.

I agree that after a very slow start, the season really got going the past two weeks. I am quite shocked to read that the Sony XDR overloaded on the Italian invasion. It was good too at my location, but nowhere near to that.

It was indeed very nice to hear the BBC Radio 2 DJ mentioning that Italian stations were overtaking BBC frequencies. Never heard something like that before. It reminded me of the text being inserted on TV programs on good tropo days, that reception could suffer from interference due to unusual weather conditions. Or something to that extent.
Those good old days...

I am looking forward to your other logbooks.

Best regards,
Janpeter

Nice reception Chris!Lots and lots of French tropo here last night and this morning including low-powered verticals from Caen, Cherbourg, Le Havre and around. There was a very good signal from France Culture on 98.4 from Clermont-Ferrand, a full 3 bars w/RDS by the time I left for work (684 km). The other frequencies from there: 90.4, 95.5 and 102.5 were also in. Other txes heard include Argenton-sur-Creuse, Tours, Lyon Mont Pilat and I think, Guéret on 100.7 (it was fighting with Cherbourg and Dudelange). The usual nearer French txes were of course much enhanced! Good DX.

Nick, Whitchurch, Hampshire.

From: gianni268@...
Topic: 36877 Message: 36877

Hi,Paul from Gianni from North West of Italy
first compliments for your today's catches in ES
87.7 is a new frequency of Aswat FM a commercial radio of Morocco
88.3 is SNRT Quran-new frequency
87.7 may be this SNRT Al Idaâ Al Amazighia from Kénitra/Mehdia in berber language or a new frequency of SNRT-Al-Idaaha-al Watania in arabic
93.7 is Radio 2M from Zaio TX or Boumalne-Dadès-Morocco
a question which is the village where do you live?is near Saltdean?where I stayed in May?regards

Gianni

36878. Band II Tropospheric Loggings for 30 June 2015

From: Dave
Topic: 36879 Message: 36879

I recently got a s/h but mint condition 311 off ebay but the sensitivity is way down compared to anything else I have like the SB 290... I had one years ago but don't remember it being quite so deaf

Is it worth adjusting the sensitivity or is this the way it is with a 311 ?
If so what pot do I adjust ?

TIA

Hi Nick

It was odd because there was no 6m DX and this Spanish station came up on the frequency and ID'ed as E2CA and I thought immediately Badajoz. Then it started talking about canaries and there was a couple of contacts to Azores and 1 to CNR on 6m. After giving it some further thought it must have been Badajoz as there were a couple of 6m contacts to southern Portugal 5 minutes later.

I've logged it as Badajoz as I also had a station on 89.6 which again has a TX from Badajoz

Apologies for the false alarm...

As usual, you'll need to decompress the file with the Monkey's Audio
tool. http://www.monkeysaudio.com/

So much DX, so little time, but I think I have found a plan which suits
me. The large number of recordings I have made are going to take longer
to get through than I would like, but I had to find a comfortable
balance between playing catch-up and work/domestic life. I have had to
accept that it WILL take me a long time to play catch-up. It's not
ideal, but it will have to do. I am still reporting live DX during Es
openings so other DXers are alerted to openings which might affect them.
But most of all, I am now enjoying taking a more leisurely approach to
this modern form of DXing. This has also resulted in an easier way to
take recordings of my DX. Ideally, I would like to keep up-to-date and
post my log on the same day, but that's not possible with this method.

Good DX!

Hi Dave the 311 only has a narrow gain control and only affects narrow mode so I assume it's deaf in both wide and narrow then fault finding is required.I have two of them and they are far from deaf the first thing I would check is the attenuator relay can you hear it click when you press the ANT ATT button.
Following on from the ATT relay is the front end unit followed by the IF strip so if it seems low gain in wide and narrow then the fault must be before the narrow stage most probably a defective transistor.I have never looked in the front end unit but on other tuners they only had passive components but the 311 does have a 13v supply to it which would suggest the might be a semiconductor in there.
Andy

On Wednesday, 1 July 2015, 0:10, "Dave amstereofan@... [SkywavesDX]" <SkywavesDX@....uk> wrote:

I recently got a s/h but mint condition 311 off ebay but the sensitivity is way down compared to anything else I have like the SB 290... I had one years ago but don't remember it being quite so deaf
Is it worth adjusting the sensitivity or is this the way it is with a 311 ? If so what pot do I adjust ?
TIA

Hi John again,

A small correction to your log:

> 88.0 1807 E Megaparty FM, Benitatxell/Puig Llorença (VAL-A) 3294 La_Mega_ 1605km

This is La Mega Radio from Calpe (VAL-A)

73, Janpeter

So it is! An easy mistake to make :-D . Thank you very much for the
correction.

Best wishes!

John

Usual suspects of course plus 3 bar signals from the likes of Angers, good signals from Parthenay too. Also:

87.8 Le 'Mouv
88.7 MFM Radio (presumed)
89.4 RFM
90.9 French
93.1 French (not Inter)
94.7 Nostalgie
94.9 RCF (with RDS!)
97.6 Skyrock
97.9 Skyrock
98.7 dance music (prob. Radio FG)
100.6 unid French
101.0 Sea FM
101.4 NRJ
105.9 Europe 1?
107.1 prob. BFM Business
107.9 RMC? Good DX.

Nick, Whitchurch, Hampshire.

Hello Andy,

Will be interesting to see if anyone knows. I also received PI of 6000 as below. Also 6C1B, both on the 21st June.

94.90MHz, PI: 6000, PS was: VECHE___ and PR??ATNO.

91.80MHz, PI: 6C1B, No PS. Only heard on Vertical aerial also.

At the time I was also logging, Slovenia, Croatia and Serbia.

I have now found the Audio Recordings I made "LIVE" at the time:

PI: 6000

Hi Andy,

The 5000 PI on 94.1 MHz belongs to Hit FM, Serbia. Two txs are listed.
The 6000 PI I don't know.

73, Janpeter

36901. Wishful Thinking?

Yahoo group: SkywavesDX (2015)
Date: 2015-07-05 15:52:56 UTC
From: John Faulkner, Skegness
Topic: 36901 Message: 36901

Well, yes!

For the record, a PI code of 9873 appeared on 87.7 this afternoon while I was away from the receiver. There was a 73% BER and a group count of 88. Not a huge amount of signal, but enough to set off RDS Spy.

Before DX Maps went down this afternoon, I noticed there was almost a double hop setup in place between the UK and the Middle East. Then I just noticed there has been a band 2 opening between Hungary and the Middle East. I wondered if there was a link-up to the UK.

I cannot find the PI 9873 listed anywhere, but just 'for the record', should something materialise. 9xxx would be Lebanon.

Good DX!

John

well when i had Lebanon years ago 87.7 was one of the freqs
also it happened during a Hungary opening

sounds promising to me John :-)

when i first became a serious fm dxer in 98 this sort of thing was way
more common, you could almost guarantee this when there was e skip to
lake balaton (evidently a good reflector)

it persisted for a few seasons but i haven't experienced it for over a decade

That's right. I had Nostalgie Lebanon in Nottinghamshire with the 93C9 PI code. We also heard it loud and clear in Sizewell.

DX ain't what it used to be.

John

From: John Faulkner, Skegness
Topic: 36901 Message: 36905

I meant to add that there is no longer a Nostalgie in Lebanon on 87.7.
It has become Radio Sawa.

John

Thanks William for the extra info on this

Based on VECHE, I wonder if it’s Romanian:

https://de.wikipedia.org/wiki/Moldova_Veche
https://en.wikipedia.org/wiki/Moldova_Nou%C4%83

Andy.

Subject: RE: [SkywavesDX] PI Help 5000 and 6000

Hello Andy,

Will be interesting to see if anyone knows. I also received PI of 6000 as below. Also 6C1B, both on the 21st June.

94.90MHz, PI: 6000, PS was: VECHE___ and PR??ATNO.

91.80MHz, PI: 6C1B, No PS. Only heard on Vertical aerial also.

At the time I was also logging, Slovenia, Croatia and Serbia.

I have now found the Audio Recordings I made "LIVE" at the time:

PI: 6000

http://www.g4fbz.net/es/unknown_9490_6000_210615.mp3

PI:6C1B

http://www.g4fbz.net/es/unknown_9180_6c1b_210615.mp3

73’s

William.

Hi All

On the 21st of June I received the UNID PI codes of 5000 (94.1) and 6000 (94.9); does anyone know what these might relate to?

The following is an extract from my log for that day:

36907. DX Loggings for 5 July 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-07-05 19:25:31 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36907

Hi All,

A busy start to the DX day today, with both tropo and Es fighting for precedence in the morning hours.
The Es opening was just like we have seen many times before this season. Intens at times on OIRT, hardly anything on CCIR.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

36910. Can You Recommend A Modern Car Radio

Yahoo group: SkywavesDX (2015)
Date: 2015-07-05 23:26:58 UTC
From: damienread@...
Topic: 36910 Message: 36910

Hi,
Just thought l would ask for members advice. I need to replace a car radio, and was wondering what is the best modern unit for FM DX.

I have older Blaupunkt units that perform great, but what about the modern batch? I have also heard that JVC are quite good.

The main features l need are blu tooth, aux in, and usb
input

Hope you can suggest something folks

Damien
Rock, Worcestershire

For selectivity and sensitivity I thoroughly recommend the radio in my C4 Grand Picasso. I don't know what it is though. (Not much use, that!). The downside is that you have to tune to desired frequencies via keypad entry, and that is buried in three sub-menu levels. If somebody could find out (what teh radio is, to begin with) and what the chipset is in this, then write some software around it to tune it, this might even beat the XDR-F1HD on selectivity. I am still to conduct a comparison between the two receivers. The other evening I was 10km from Belmont, in full view of it and it was still resolving NRJ from St Omer on 102.3, without any splatter from Lincs FM 102.2! Not THAT is some going!

Alternatively, Lookout for a Blaupunkt Nasvhille model with has the DigiCeiver logo on the front glass (it's probably plastic). The DigiCeiver logo is the same adaptive filtering system as SHARX.

There are other Blaupunkt car radios which use the DigiCeiver processing, but some are slower to 'adapt' to narrower bandwidths.

_*I also have a Balupunkt Casablanca MP56 which has the DigiCeiver system. This is for sale at £30 and is in pretty good condition, if you or anybody is interested. *__*I've barely used it. *_

Hope this helps.

John

A word of warning about Blaupunkt car radios with Sharx as my Blaupunkt san remo rd 168 has Digiciever on the front but this does not have Sharx as it's wide as a barn door.
The best way to find out if a model does have Sharx is to look at the service manual for the model.

The Culleredo transmitter is coming in here on tropo at 1277 km distance. It's VERY weak indeed. 91.6 and 95.8 are the only ones I can hear so far.

Es have suddenly appeared (unid on 91.6 only) as I type this. Culleredo is definitely NOT Es.

Good DX!

Hi All,

A micro opening on the OIRT band this evening.

Also, a 6 meter TA opening, with some strong signals from North America. Nothing higher up the band though.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

From: Jim Smith G0OFE
Topic: 36934 Message: 36934

Back to posting logs again after having the severe distraction of suddenly having to completely reinstall my main PC from scratch a couple of weeks ago.

Hey-ho, c'est la guerre.

After a very flat weekend (coinciding with the VHF NFD amateur radio contest weekend, naturally.) things perked up yesterday with some mid-morning reception of Toulouse followed up by a decent evening opening to Spain, with a bit of Es somewhere in the middle.

Log and map:

http://www.fmlist.org/fm_logmap.php?datum=2015-07-06

Hi All,

A good Es day today. Of which I missed the morning session. Very nice to get another good opening into the Baltics.

@ Paul Logan: since your return we have almost non-stop Es back. You get the message, right? :0)

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Very nice loggings Nick! Good to see the rotator is bringing in a lot of results.

On a separate note, when Es is quiet I am taking some time to listen to your audio clips. Which is great pleasure, given the excellent quality when signals are strong. You must be using a good tuner for the recordings.

Best regards,
Janpeter

Date: 2015-07-08 05:37:58 UTC
From: nick gilly
Topic: 36936 Message: 36940

Thanks very much Janpeter. The Es clips are taken from the Sony XDR-F1HD. I use this tuner because of its extreme selectivity and because it has RDS. It also cleans up a lot of noise so it does make for easier IDing on weak signals in a crowded band. Tropo recordings will probably be from the Denon TU-800L.
I have a few more clips to add which I will probably do tonight. Good DX.

Nick, Whitchurch, Hampshire.

Kenwood L-1000T, Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, horizontal Körner 9.2 beam (Antennenland version), Yaesu G-450C rotator

Very nice loggings Nick! Good to see the rotator is bringing in a lot of results.
On a separate note, when Es is quiet I am taking some time to listen to your audio clips. Which is great pleasure, given the excellent quality when signals are strong. You must be using a good tuner for the recordings.

Best regards,
Janpeter

From: Fast Logger
Topic: 36948 Message: 36948

Hi

While outside, my lounge hi-fi has recorded an Italian RDS _VATICANA_ on 93.3.

Given that this poorly selective device often gets RDS from stations that are 100 khz under or above the displayed frequency, what station is the most plausible

with the _VATICANA_ RDS in the 93.2 to 93.4 bracket ?

Unfortunately my Sony tuner does not keep RDS when the signal fades, so in absentia watch is impossible, and RDS Spy requires fumbling inside the RECEIVER, of which I'm incapable of.

i'm having RAI1 (5201) right now on 87.6.

Many thanks.

Pat

36953. Es 7th July

Yahoo group: SkywavesDX (2015)
Date: 2015-07-08 20:48:09 UTC
From: Jim Smith G0OFE
Topic: 36953 Message: 36953

An interesting old day yesterday, with some early E European paths soon moving to Italy, and then southern France before the Es took a breather.

Then we had the best opening of the year so far to the Baltics and northern Poland, and I was pleased to pick up a new country in Kaliningradsk. I hoped for Russia but the path to St Petersburg evident 100 miles east of me did not reach here.

WE then finished off with an early evening opening to Spain and North Africa.

Logs and map:

http://www.fmlist.org/fm_logmap.php?datum=2015-07-07
<http://www.fmlist.org/fm_logmap.php?datum=2015-07-07&omid=2748> &omid=2748

(For those wondering, I use the DXCC Countries list rather than the ITU list. Old habits die hard!)

Today was even better, but I have a lot of logs to enter into FM List yet..

36955. What a day!

Yahoo group: SkywavesDX (2015)
Date: 2015-07-08 22:03:53 UTC
From: John Faulkner, Skegness
Topic: 36955 Message: 36955

A spectacular day with lots of Es, although it didn't look like the Es were going to come close enough from the east this morning. Italy and the Balkan countries produced signals as high as S9+50dB at times. At the peak of the afternoon/evening session, Italy was blocking itself out. The band became that familiar soupy mess and even strong stations in the clear would struggle to RDS.

The highlight came at 1840 with Turkey RDSing as high up the b and as 101.7 MHz. The band turned very exotic sounding indeed and I am hoping there will be more goodies when I eventually get around to checking today's recordings which, at this rate, looks like being during August or September. (I am not joking)

Good DX!

John

36956. PI code 3023 93.6. Ankara?

Yahoo group: SkywavesDX (2015)
Date: 2015-07-08 22:24:33 UTC
From: John Faulkner, Skegness
Topic: 36956 Message: 36956

Playing back through my recordings for the 21st June I came across a station on 93.6 with a PI code of 3023 and a mixed up PS name of 6*__NA_*.

Recording of songs here: https://app.box.com/s/hwrne47gdwvfi03pqv1ilsv9kx1jpg2e The first song may give a clue as to the language. There is a sound effect of an engine revving between the songs. Not sure if that is relevant or if it is part of a song, though I doubt it.

FM List gives 3023 as Radio Gazi, Ankara, but I cannot find any reference to this on 93.6.

Hopefully somebody knows more.

Many thanks

John

Thank you Kurt.

I used the Shazam app to find the artist, but this was not recognised either. The band was open to the Balkans at the time, so maybe a new station somewhere there.

Best wishes.

John

From: John Faulkner, Skegness
Topic: 36956 Message: 36959

I think I have it.

I just discovered a few stations from Albania after this time. Radio National from Tiranë uses 93.6 with the PI code 3223. Similar, so either a corruption or subtle code change. The PS name could have been scrolling, character by character, and so maybe some clues there, but not certain. I will assume this is (much) more likely to be Tiranë for now.

So Albania gets the better of me AGAIN! :)

Thank you again

"Four or five minutes entering a logging."

When this happens, it would help me to know the time, and what you logged, so I can dig through the log files.
Also, when to log is entered and you are returned to the table, there are two time measurements given. I'd be interested in these values.

73,
Günter

36969. R3 Unid

Yahoo group: SkywavesDX (2015)
Date: 2015-07-09 16:10:51 UTC
From: AnnePaulWill@...
Topic: 4854 Message: 36969

Hi All,
Carrier on 77.250,017 Mhz at the moment. Occasional weak video. Not had this offset before.
Ukraine 1+1 on R1 coming in like local station so presume this also Ukraine.

Regards
Paul H
Amersham

From: Jim Smith G0OFE
Topic: 27661 Message: 36970

8th July 1453z 98.5 PI B600 Playing pops

Nearly put paid to my identification of a Turkish station on the same frequency!

Would appreciate any pointers.

Cheers

Jim

From: nick gilly
Topic: 36971 Message: 36971

Here's my recordings of the Turkish stations received here on the evening of 8.7.15:

87.7 Slow Türk Izmir 2629 km: https://app.box.com/s/svaeh2raooiypego3aztw602hdn8al3s

87.9 Küpe FM (either Kirklareli 2407 km or Marmaraereglisi/Su Deposu 2504 km): https://app.box.com/s/aj6k3au2sy163v62iomdtll5yx1b6m4c - I think there is another Turkish station mixing in the background

87.7 Slow Türk Izmir 2629 km part 2: https://app.box.com/s/zis4hznw45c3u29swfyktzow3zrrjv4x

87.5 Damla FM Istanbul 2579 km: https://app.box.com/s/cc6w2nqw4g8t9u3gyte0qtqytvi9xfcg

For once these signal were around for long enough to get IDs. In fact both Küpe FM and Damla FM produced PS names on the XDR! Good DX.

Nick, Whitchurch, Hampshire.

36973. Re: Band II Sporadic E Loggings for 18 June 2015

Yahoo group: SkywavesDX (2015)
Date: 2015-07-09 20:02:08 UTC
From: Janpeter van Dijk
Topic: 35847 Message: 36973

Hi All,

After several nailbiting hours at the office yesterday, I finally could start my own DX session around 5:30 pm local time. Contrary to many times before this season, the propagation did not soon fade away. On the contrary, the next almost five hours brought one of the best openings I have seen.

At the start, ID-ing was difficult. Band II was open into a wide area of Italy, with several stations on each frequency. Fading was very fast, signal distortion was high and both the MUF and the skip area were constantly moving. After one hour, things became more interesting with relatively short skip from France. In 30 minutes I heard more French stations in a single opening than ever before, only a few of them could be identified. Then out of nowhere came a station from Montenegro with full RDS on the side of the antenna. This was a prewarning of a majestic several hours to come. In which the skip was into South Eastern Europe, with constantly new countries popping up. During this period it was Band II E-skip as good as it gets. Short skip, long skip, suspected double hop, with North Africa in the mix at times. Absolutely fantastic stuff!

The 16 countries received during this session:
Albania
Algeria
Austria (it has been many years since this happened)
Bosnia Herzegovina
Bulgaria
France
Greece
Hungary
Croatia
Italy
Lybia (day number six this season)
Montenegro
Roumania
Serbia
Tunisia
Turkey

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Wow stunning logs there Janpeter. This was indeed a fantastic opening, the first one where Turkey has come in for long enough to actually positively ID the stations. Some very interesting propagation with TUR being heard from the south coast to NW England. We need more days like this!

Did you record the UNID Arab stations? I would love to hear the clips if so. Good DX.

Nick, Whitchurch, Hampshire.

Hi All,

After several nailbiting hours at the office yesterday, I finally could start my own DX session around 5:30 pm local time. Contrary to many times before this season, the propagation did not soon fade away. On the contrary, the next almost five hours brought one of the best openings I have seen.

At the start, ID-ing was difficult. Band II was open into a wide area of Italy, with several stations on each frequency. Fading was very fast, signal distortion was high and both the MUF and the skip area were constantly moving. After one hour, things became more interesting with relatively short skip from France. In 30 minutes I heard more French stations in a single opening than ever before, only a few of them could be identified. Then out of nowhere came a station from Montenegro with full RDS on the side of the antenna. This was a prewarning of a majestic several hours to come. In which the skip was into South Eastern Europe, with constantly new countries popping up. During this period it was Band II E-skip as good as it gets. Short skip, long skip, suspected double hop, with North Africa in the mix at times. Absolutely fantastic stuff!

The 16 countries received during this session:
Albania
Algeria
Austria (it has been many years since this happened)
Bosnia Herzegovina
Bulgaria
France
Greece
Hungary
Croatia
Italy
Lybia (day number six this season)
Montenegro

Roumania
Serbia
Tunisia
Turkey

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.
